### **PRODUCT 100% PLUS GUARANTEE**

**As President of PermaLoc Corporation and a Landscape Architect, I have designed our products to meet the highest levels of product performance and manufacturing. As such, I offer the following guarantee:**

**Our edgings are guaranteed for 15 years not to crack, rot or self-destruct\* from manufacturing defects. If the above condition were to occur, we will replace 100% of the damaged material and, unlike most other product guarantees, we will pay a fair industry labor rate to reinstall the edging.**

**\* Does not apply to natural weathering of materials or damage from hand or power tools (Example: Lawn mower, power edger or snow blower damage).**

### **COMPANY OVERVIEW**

- For over a decade PermaLoc has been supplying the finest edgings and restraints to the world's finest projects including: Epcot Center, SeaWorld, EuroDisney, The Mirage Hotel and the New Roosevelt Memorial in Washington, D.C.
- PermaLoc has the widest system of stocking distributors of any landscape edging manufacturer. Most items are available in convenient 8'-0" UPS-able sections in addition to our standard 16'-0" sections.
- For over ten years PermaLoc has offered same day as ordered shipping eliminating construction delays.

### ***PERMALOC CleanLINE - Aluminum Landscape Edging***

*(See "Landscape Edging - CleanLine" Snapshot for specification information.)*

### **PRODUCT DESCRIPTION**

PermaLoc CleanLine is our series of aluminum landscape bed edging noted for permanence, ease of installation and a decade of proven performance on the world's finest projects. Available in 1/8" or 3/16" thickness by 3", 4", or 5-1/2" depths. Finishes include: Mill (natural aluminum), Black DuraFlex (electrostatically applied, baked-on paint) and Black Anodized. Heavy aluminum stakes that come with each section lock on to the edging and securely anchor it into the ground. Our patented Interlocking Snap-Down Connection eliminates possible weak points in the system.

### **PRODUCT BACKGROUND**

Over the past decade, Specifiers and Installers alike have come to rely on PermaLoc CleanLine Aluminum Landscape Edging for one reason... **PROVEN PERFORMANCE!** Landscape professionals increasingly demand products that both improve the level of aesthetics while decreasing long-term maintenance requirements. When designing PermaLoc CleanLine Aluminum Edging, our goal was to create a product that would assure crisp, clean permanent lines as well as being cost effective by minimizing long-term maintenance. PermaLoc CleanLine is performing on many of the finest projects worldwide, ranging from industrial to residential. We

assure you that our design advantages will enable our product to exceed your expectations in living up to its name, PermaLoc CleanLine.

#### **DESIGN FEATURES**

- Patented Interlocking Connection System
- 12" heavy duty interlocking stakes
- One side of the edging is completely free of obstacles
- Convenient 8'-0" UPS-able sections as well as 16'-0" sections
- Rapid permanent installation
- Aluminum eliminates cracking, rusting or rotting
- Safe and aesthetic

#### **PERMALOC *StructurEDGE* - Flexible, "L-Shaped" Aluminum Paver Restraint**

*(See "Landscape Edging - StructurEdge" Snapshot for specification information.)*

#### **PRODUCT DESCRIPTION**

PermaLoc StructurEdge is our series of 5 reversible "L-Shaped" aluminum paving restraints. Five types of reversible StructurEdge Restraints are available for a variety of applications, from the heaviest industrial driveway to the smallest residential patio. StructurEdge readily forms curves, radii and angles allowing wide installation flexibility. StructurEdge is anchored through the use of 10" spiral steel spikes and is designed to receive spikes every 6". The patented Snap-Down connections eliminate possible weak points and, unlike bulky triangular restraints, the tight-fitting "L-Shaped" design promotes healthy grass and accommodates irrigation heads.

#### **PRODUCT BACKGROUND**

StructurEdge is designed for the areas where hard-form and natural landscape meet. Designers tell us that these areas are the most difficult to retain; although well-defined on paper, their clarity is often lost to the realities of time and ongoing maintenance. Architects and Engineers requested that we design a more effective alternative to the Plastic, P.V.C. and steel systems currently on the market. The most common situation that the specifiers raised about the other systems was they were damaged easily by maintenance equipment, separated at the joints and were just not designed to last the lifetime of the installation. StructurEdge is a permanent paving restraint system that is designed to be easier to install and out-perform plastic, P.V.C. and steel systems. We are confident that PermaLoc StructurEdge will exceed your performance expectations.

#### **DESIGN FEATURES**

- Reversible design allows the base to be installed under or away from the paver
- Strong "L-Shaped" design
- Designed for both straight and curvilinear applications
- Convenient 8'-0" UPS-able sections
- 8'-0" sections readily form diameters as small as 3'-0"
- Secure anchoring with 10" spikes
- Easily maintained with power landscape edgers
- Aluminum eliminates cracking, rusting or rotting
- Safe and aesthetic
- Rapid permanent installation

#### **PERMALOC *PermaSTRIP* - Rigid "L-Shaped" Aluminum Maintenance Strip**

*(See "PermaLoc PermaSTRIP" Snapshot for specification information.)*

### **PRODUCT DESCRIPTION**

PermaLoc PermaStrip is a rigid, "L-Shaped" Aluminum Maintenance Strip specifically designed to make straight runs bordering buildings, fences and other maintenance problem areas. PermaLoc PermaStrip is made out of heavy duty aluminum and is available in an 1/8" or 3/16" thickness and 3-1/2" height. Finishes available include: Mill (natural aluminum) or Black DuraFlex (electrostatically applied, baked-on paint). PermaStrip comes in 16' sections and is anchored with (5) 12" heavy duty aluminum stakes. The 16' sections are connected using PermaLoc's unique sliding Connection System.

### **PRODUCT BACKGROUND**

Architects tell us that maintenance strips are one problem area that can detract from the clean architectural appearance of a structure faster than any other. The realities are that wood, plastic and even metal landscape edgings are not designed to remain straight over time. Wood warps, splinters and rots over time. Landscape edgings are designed to be flexible for most landscape applications, and as such end up looking wavy as a maintenance strip. Any of these products leave the architecture and project looking unsightly, requiring high levels of maintenance. PermaStrip is easy to install in perfectly straight runs and is designed to stay that way over the lifetime of the project.

### **DESIGN FEATURES**

- Unique Sliding Connection System
- Ridged, strong "L-Shaped" design
- 12" heavy duty interlocking stakes
- One side of the edging is completely free of obstacles
- Rapid permanent installation
- Aluminum eliminates cracking, rusting or rotting
- Easily maintained with power landscape edgers
- Safe and aesthetic

### **INSTALLATIONS INCLUDE:**

#### **NATIONAL INSTALLATIONS**

AmeriFloral  
Arizona Center  
Basketball Hall of Fame  
Charleston Waterfront Park  
Chicago Art Institute  
Epcot Center  
Federal Bureau of Investigation  
Fidelity Insurance
