

Pavilions

Vixen Hill Pavilions are engineered to assemble nearly the same way as the smaller gazebos. Structural members increase in size to accommodate clear-span roof systems up to 30 feet in diameter. Standard sizes are 21, 24, 27 and 30 feet. The Grand Pavilion is a combination of two 21-ft. units and one 30-ft. unit joined by two walkways. Foundation drawings and engineering calcs are available with all structures.

All Vixen Hill Pavilions arrive at the job site ready to assemble. Our Grand Pavilion prices include delivery and on-site assembly management (U.S.A. only). Foundation blue-prints and engineering calculations are available on request.

The four standard Pavilions (sizes 21, 24, 27 and 30 feet) generally assemble in less than 60 man hours. They can be purchased without the floor system for slab mounting. Two-tier and three-tier roofs are available in all model sizes.
