

ASSEMBLY

Vixen Hill Porch Systems combine pre-engineered modules into an easy-to-assemble package tailored to your specific configuration. Retrofit an existing deck or porch using some modules only... or combine the roof, wall and floor systems for a new all-season enclosure.

Simply send a floor plan, with front and side views and we will quote a price. Options such as trims, windows, etc., can be quickly added later or ordered with the package. Options are inserted and removed quickly (using adjustable bullet catches) to adapt to seasonal porch environments.

OPTIONS

With no decorative or functional inserts, this simple screened facade complements contemporary or traditional architecture. A variety of inset options can be added later, changing either the look or use.

All decorative inserts install in minutes without tools. Adjustable bullet catches fasten these options in place. Varying degrees of security can be accommodated.

Enclosure options such as windows, louvers and raised panels can be used to shelter the porch environment from wind, rain and cool seasonal temperatures.

Other options include roof skylights, transoms, reflective glass, glass storm inserts and a selection of roof elements.

The Porch System shares many of the design features found in Vixen Hill GardenHouses, Gazebos, Pavilions and Shutters.
