

Regular Gypsum Wallboard

Temple-Inland's regular gypsum is manufactured in a range of dimensions which make it an affordable, lightweight material for remodeling and new construction.

The newest and most innovative of Temple-Inland's gypsum product line is Stretch 54®. A full six inches wider, Stretch 54 reduces the number of drywall joints in 9-foot walls for a smoother surface, critical for today's thinner wallpapers and new, no-texture finishes.

Regular Gypsum Wallboard is available tapered in 1/4" and 3/8" thicknesses, 4 feet wide by 8 feet long. Also, 1/2" thick, 4 feet wide by 8 to 16 feet long.

*Meets ASTM C36 and Federal Specification SS-L-30d for Type III, Grade R, Class I.
Application standards include ASTM C840 and GA216.*

Regular Stretch 54 is available tapered 1/2" thick, 54 inches wide by 10 to 16 feet long.

*Meets ASTM C36 and Federal Specification SS-L-30d for Type III, Grade R, Class I.
