

Gypsum Shaftliner

Temple-Inland Gypsum Shaftliner has a water-resistant core and water-repellent face that makes a popular base material for a variety of shaft wall assemblies.

It's an integral part of Temple-Inland's Silent Guard™ component system which combines fire safety and sound abatement features in an easy-to-install liner for elevator shafts and stairwells.

Available 1" thick, 2 feet wide by 10 or 12 feet long with square edges.

*Meets ASTM C442 and Federal Specification SS-L-30d for Type IV, Grade TP-6, Class 2.
Application standards include GA216.*
