

Product Introduction

Stonite is a stone like no other. Over 90% of its composition is natural quartz sand; the remaining are pigments and polyester resins closely monitored throughout the manufacturing process with the most exact, numeric controlled, computerized machinery.

Stonite offers the aesthetic appeal and cold feel of natural quarried stone such as marble or granite, but is far more durable. Indeed, due to its physical composition, Stonite outperforms other natural stones as well as solid surfaces. Stonite is highly stain-proof, scratch and burn resistant, and virtually maintenance-free.

Its unique characteristics make Stonite ideal for an array of applications: from countertops and vanity tops, to flooring, interior and exterior walls, and fireplace surrounds.

Stonite is a product of TECHNIMAR Industries, Inc.
