The PS-80AL's aluminum frame makes it an ideal choice for installations where added structural stability is important. The fabric or perforated wallcovering you choose will be beautifully wrapped around the front and sides of the panel. The PS-80AL is available in 1-5/16" or 2-5/16" thicknesses, and a maximum width of 5 feet when covered with fabric. If your height requirements are greater than ten feet, custom construction can be arranged.
