NOISEMASTER Wall Panels incorporate a colorful fabric facing laminated to 1" or 2" thick rigid, high strength fiberglass. The fabric is bonded to the face and around the edges of the back side of the panel, producing crisp upholstered corners. Beveled or square corner edges add style to these lightweight, highly absorptive panels.

An NRC rating of .85 is achieved using the 1" thick panels which is suitable for most any acoustical application. **NOISEMASTER Wall Panel** can be installed with mechanical fasteners, tile adhesives, or hook and loop material. Custom sizes are also available.

- Offices/Music Rooms
- Home Theaters
- Gymnasiums
- Schools
- Conference Rooms
- Libraries
