

## **Wood Grades**

### **First Grade (Competition)**

The face of the flooring is practically free of defects, but may contain color variations. This is not available in some sizes and is limited in others. Check with your Connor.AGA representative when considering First Grade specifications.

### **Second and Better (Standard)**

This grade admits face defects such as tight, sound knots, green or black streaks, slight checks, and slight imperfections in dressing. Distinct color variations are permitted, but predominantly dark heartwood with dark streaks or spots is not included. Sufficient attention is given to appearance to make this grade suitable where a bright appearance is desirable. Second and Better is the “standard” grade for all system applications, except for industrial applications.

### **Third Grade (Multi-Purpose)**

All defects common to the wood are allowed, providing the flooring will lay and give a good serviceable floor. Color is predominantly dark heartwood. Where low cost is essential and light appearance is not a factor, Third Grade is an excellent choice.

### **Third and Better Grade**

Combines standard Grade with up to 40% Multi-Purpose Grade for a medium colored floor at a moderate price.

Connor.AGA is the market leader in developing and producing a full range of environmentally safe, performance engineered wood and synthetic flooring systems for all types of competitive recreational activities. Ask for details about Connor.AGA’s complete line.
