

## **INSTALLATION SYSTEMS**

### **UNITIZED INSTALLATION SYSTEM**

Flexco Contract, Appeal, Achievement™, Conductive and Static Dissipative Tile may all be heat welded into a seamless, one-piece floor using Flexco Unitized Installation. Floor installed by this unique method are fused together by application of a special welding bead to the floor tile, in either harmonizing or contrasting colors. Made of a special formulation of pure vinyl resins, the 36" x 36" factory pre-grooved tiles are installed in a conventional manner, then vinyl welding beads are fused in the grooves with a portable heat weld gun. The result is a one piece floor without seams. Because of the special vinyl formulation, heat welding of the tiles is fast and permanent.

(Text to go with 4 photos)

- A.) Special vinyl heat weld cove base facilitates a seamless union of floor and wall.
- B.) Pre-grooved 36" x 36" tiles speed installation.
- C.) Flexco vinyl tile may be installed as self-cove.
- D.) Vinyl welding bead is placed in the groove and fused by heat application.

### **FEATURE STRIPS**

Flexco has created feature strips to make innovative designs come to life. They can be applied to enhance existing patterns - or create their own, set off areas from the rest of the room, act as borders, geometrics, checkerboards, stripes ... the list goes on. Feature strips are easy to install and maintain and come in a rich palette of designer colors to complement any design scheme. They provide that little extra something that makes a good floor a great floor.
