

SEAMCO LABORATORIES

MR-MANUFACTURER

Seamco Laboratories was founded in the late sixties and has been manufacturing resin composition floors ever since. Seamco has three manufacturing processing plants. Headquarters and main plant are located in Tampa, Florida, the other two plants are located in Waco, Texas and Pineville, Louisiana. There are three additional distribution centers located in Hudson, Florida, Altamonte Springs, Florida and Azusa, California. Through these 6 locations Seamco handles all distribution of its product directly to over 800 factory trained dealers.

Seamco has a director of training to handle schooling of individuals every work day at Seamco headquarters. At least once a year Seamco has regional seminars in Fla., Texas, and Ca., to keep the contractors informed on various products and details. Annually the Seamco expo is held in the Tampa Bay area. The expo is designed to keep dealers in tune with his products, application techniques and advancement of new products. Seamco places high quality value on its dealers as well as its products.

There are millions of square feet of the various Seamco products installed every year. So, if you have surfacing or resurfacing needs, want reliable quality products and a company that believes in training it applicators, then specify Seamco. If you have any questions, give Seamco a call.

Product Line Overview:

SEAMCO STONE

PP-PRODUCT PRESENTATION

Highest quality modified 2 component epoxy designed specifically for adhesion, flexibility and resisting harsh exterior elements, combined with quality, clean and only fire dried pebbles processed by Seamco specifically for this use. Pebbles are supplied in different sizes up to 1/8 of an inch and come in a wide variety of styles and colors. Bordering with contrasting colors, logos, designs, etc., are easily achieved with the range of pebbles offered by Seamco.

SEAM-TEX

PP-PRODUCT PRESENTATION

Seam-Tex is one particular style of Institutional and Industrial flooring that offers a very durable and functional flooring at a reasonable cost. Seam-Tex consists of a highly modified 2 component epoxy and 3-M colorquartz aggregate. The 3-M colorquartz provides the texture and coloring. Coloring with colorquartz is uniform. There are no lap marks, and color retention is much greater over the life of the floor than using the cheaper silica sand with pigmented epoxy systems. The colorquartz comes in six colors: Grey, Buff, Red, Green, Brown and White. White is primarily used to blend with the other five colors. By blending multiple colors together you achieve what some call tweed colors or patterns. Texture can range from a smooth finish for easy cleaning purposes to a very aggressive non-slip finish.

DESIGN FLO-CRETE

PP-PRODUCT PRESENTATION

Design Flo-Crete is a new concept of using a cementitious compound combined with water-based

epoxies and polyacrylates to create functional, durable and elegant flooring systems for exterior, interior and vertical systems.
