

TARAFLEX SPORT M

By far, the most complete and versatile indoor sports flooring available today, TARAFLEX SPORT M combines top playability with safety, comfort and ease of maintenance. Its unique multi-layered construction was designed to meet very specific needs:

- A. Wear layer - 0.85" (2.2mm) = Durability
- B. Fiberglass mesh = Traction and Dimensional Stability
- C. Closed cell backing = Shock absorption and energy return

- **The Wear layer**, made of 100% pure textured vinyl, is the crown of this product. Offering a safe non-slip surface with excellent resiliency and accurate rebounding, the top layer is also injected with ROCTOP (see description).
- **The fiberglass mesh** provides complete dimensional stability preventing the flooring from peaking at the seams, contracting or expanding.
- **The closed-cell foam backing** was designed to absorb impact shock and maximize energy return, thus reducing the potential for stress related injuries and giving the floor its anti-fatigue properties.

SPORT M is perfect for any sport or combination of sporting activities because it can be ordered in the specific color, surface texture and with the particular game lines you need for your project. And unlike poured synthetic floors, TARAFLEX SPORT M is factory-made under strict quality control guidelines assuring that the end product exceeds all required standards and specifications such as uniform thickness and sound insulation.

Safety

Taraflex Sports Flooring will absorb as much as 35 percent of the athlete's impact that significantly reduces the risk of stress related injuries. Sports physicians and bio-mechanical studies have proved that sports injuries occur five times more often on hard surfaced flooring as compared to resilient surfaces.

ROCTOP® Reduces Maintenance Costs

Taraflex Sport M, Action Sport, Surface and Track are treated with our exclusive ROCTOP® solution. ROCTOP® is a factory applied UV cured polyurethane anti-dirt treatment incorporated into the floor covering by high pressure spray. It completely seals the wear layer and becomes an integral part of the finished product. ROCTOP® gives the flooring its high resistance to soiling and scuffing. It also reduces the risk of skin burn due to friction while retaining its excellent playing characteristics.

ROCTOP® is the result of years of research and development that now allows easy scuff removal and permits low intensity maintenance programs. Studies have proven that ROCTOP can actually **help reduce maintenance costs by 40 to 50%**. The specially treated wearing surface is equally resistant to tearing, fungus and bacteria growth, and staining from foods and chemicals.

SANOSOL®

All Taraflex products contain SANOSOL®. SANOSOL® is a permanent fungicidal and bacteriostatic treatment that prevents the growth of micro-organisms on the flooring. SANOSOL® provides a clean, hygienic playing surface thus reducing the risk of skin related infections.

Installation

The installation of SPORT M is to be performed by flooring professionals and according to Taraflex guidelines. For more information, please refer to the TARAFLEX SPORTS FLOORING “Specifications and Installation Manual.”
