

TASSO Fiberglass Wallcovering

About TASSO

TASSO, a world leader in superior textiles since 1890, produces the 21st century wallcovering solution, Tassoglas and Tassoglas UNIC Paintable Fiberglass Wallcovering. Imagine...a wallcovering durable enough to last thirty years or more, versatile enough to inspire limitless design looks in any type of commercial or residential application, and “natural” enough to be a true friend of the environment. Paintable Tassoglas is all these things, and more. Woven of pure, strong, high-tech fiberglass yarns, Tassoglas outperforms any wallcovering made today with its safety and performance features. In addition, distinctive Tassoglas is far more than a decorating “problem solver.” It combines the versatility of paint with exciting textures and patterns to provide unparalleled design and performance advantages. The result: a wallcovering truly ahead of its time.

Tassoglas is the original, paintable fiberglass wallcovering system manufactured by the proven world leader, TASSO A.B. in Sweden (an ISO 9000 company). The 100+ year old company has a worldwide reputation for quality products, excellence in support and service, and for consistently being at the leading edge of research and development in fiberglass wallcovering technology.

New Product

TASSO recently introduced new Tassoglas UNIC, the newest concept in paintable fiberglass wallcovering that is pre-primed from the factory and only requires a single coat of paint when a low lustre is specified.

Meets Environmental Health Standard

Tassoglas is the only paintable fiberglass wallcovering that meets the stringent Oko-Tex Standard which means there are no harmful substances in Tassoglas. (An Oko-Tex certificate is available upon request.) Tassoglas is made from pure, non-toxic, all natural materials of sand, lime and clay. A fiberglass yarn is produced which is then woven into a dimensionally stable web and treated with a food starch binder to create a wallcovering fabric with a wide range of textures and qualities.
