

About Novaglass

Novaglass Borders made of woven fiberglass, a 21st century high tech material, are hand printed resulting in a unique design that displays a soft fabric finish. Because of the inherent characteristics of fiberglass, the border will not shrink, stretch or deteriorate and is also breathable to help control mold and mildew growth. The fabric substrate feature of the border will cover minor imperfections of the walls and can be installed directly over knock-down textured walls, rough surfaces, multi-color paint, plain painted walls, existing vinyl or fiberglass wallcovering, or other types of wallcovering with only minor surface preparation. Novaglass borders will enhance any room design with an innovative stunning effect.

Novaglass is exclusively distributed in North America by Roos International, Ltd.
