“The Steeple People”...PLUS

MR-MANUFACTURER

THE STORY

Campbellsville Industries pioneered the prefabricated aluminum steeple, thus “The Steeple People.” Later, to meet the demand for maintenance-free architectural components, Campbellsville Industries introduced aluminum cupolas, balustrades, dormers, cornices, louvers, and many more products, and now, “The Steeple People”...Plus. Today, over 7,000 customers in virtually every state and many in foreign countries enjoy the beauty and elegance of products from Campbellsville Industries.

CAMPBELLSVILLE: Steeples and Cupolas

PP-PRODUCT PRESENTATION

THE CUSTOM STEEPLES

There are those distinguished churches that demand unique and special steeples. Whether we are called on to create a special design, duplicate an architect’s design, or reproduce a historic landmark, Campbellsville Industries can meet the challenge. Our wide selection of metals – aluminum, copper, lead-coated copper, microzinc, terne-coated stainless, etc. – give unlimited possibilities.

THE CUSTOM CUPOLAS

Historically, cupolas have often been an important part of many traditional buildings. Today, cupolas are used to complement a much wider range of styles and designs. Banks, courthouses, schools, offices, and motels are buildings that readily accept the custom Campbellsville cupola. Your cupola can be further accented by clocks, carillon or bell, weathervanes – all from Campbellsville Industries.

OP-OVERALL PRODUCT DATA

THE STOCK STEEPLES AND CUPOLAS

Not every building that requires a steeple or cupola demands a special custom steeple or cupola.

Stock designs offer customers economy units with immediate delivery. Kynar baked-on finishes, anodized finishes, copper, lead-coated copper, microzinc, and other exterior claddings can be provided for stock designs. The all-aluminum framework is lightweight, yet rigidly constructed to meet local windload conditions. Accessories include crosses, weathervanes, finials, clocks, balustrades, and urns.

THE CUSTOM CORNICES

An endless variety of shapes, designs, and ornaments are combined to create graceful custom cornice systems from Campbellsville Industries. The planning and creation of a custom cornice system is a demanding art, and requires the skills of artisans and craftsmen from inspiration to completion.

Fabricating processes of forming, spinning, and casting are used in the crafting of custom cornice systems. A wide range of metals and materials – aluminum, copper, lead-coated copper, microzinc, urethanes – give unlimited possibilities. Sometimes, custom cornice systems are provided complete with structural aluminum framework, ready for contractor's/owner's installation.

Frequently, we are commissioned to create a special design, duplicate an architect's design, or reproduce a historic landmark. Most any profile and detail can be reproduced, no matter how intricate. However, options can be more economical, and sometimes stock components meet requirements.

Preliminary design and consultation to the architect, contractor, and/or owner available from our design staff. Send us your drawings, sketches, and/or photos for our evaluation and pricing.

THE STOCK CORNICES

Not every project requires the exacting details that a custom system demands. Here is a collection of stock cornice profiles which has been popular over the years, and is offered in any quantity in lengths up to 12'-0".

Stock cornices are available in .032" aluminum with Kynar 500 baked-on finishes (white, sandstone, cream, colonial white, ivory, and medium bronze), 20 oz. copper, 20 oz. lead-coated copper, or in .032" microzinc.

Blocking and supports for stock cornices are minimal, and installation is easily accomplished. The durability of Campbellsville stock cornices provides the owner savings in maintenance costs. The aluminum cornices with Kynar 500 finishes have a 20 year life expectancy – far exceeding conventionally constructed cornice systems. Other natural metals are even more permanent.

Aluminum balustrades and railings for...

- RESIDENCES
- BANKS
- CHURCHES
- MOTELS
- OFFICES
- SCHOOLS

Aluminum balustrades and railings from Campbellsville provide lifetime service and durability. Components are fabricated from the finest materials available, fashioned by skilled artisans and craftsmen. Fine examples can be seen throughout the country.

Applications are unlimited. So exacting in details, they are often mistaken for conventionally constructed units. Extreme flexibility, plus many stock components which meet most design requirements.

Let Campbellsville assist in the planning stages. Preliminary details from our design department often eliminate costly installation and additional supports.

CLOCKS

Campbellsville clocks give that special service to communities throughout the country, whether in towers, at street corners, or on buildings. From one to four dials can be driven from a central motor or separate motors – all synchronously driven. Remote controls with fast reset let you keep correct time.

Translucent or aluminum dials, choice of numerals, variety of style – all from Campbellsville. Complete construction details and wiring diagrams provided by our technicians.

Let a Campbellsville clock of distinction serve your community. There is a clock to complement your tower or edifice, whether the design be traditional, contemporary, or modern. Our design department will work with you in all aspects of planning.

Street Clocks

Campbellsville street clocks give unique identity to cityscapes, parks, and streets. We can create unique and authentic designs for every application, or reproduce a historical clock and housing for those discriminating applications. A wide variety of popular designs are also available. Campbellsville artisans apply their skills in casting, fabricating, spinning, and forming to obtain handsomely crafted units. Creations from our design department are available to assist in selecting just the right design and size. A wide range of metals (copper, aluminum, lead-coated copper, microzinc, stainless steel, etc.) multiply the possibilities.

Canister Clocks

Campbellsville canister clocks are self-contained units, all wrapped with aluminum sheet over a structural aluminum frame. Illumination of dials available, and the aluminum system is also encased. An aluminum mounting ring allows for easy installation. Canister clocks are best suited for recessed or surface mounted installations.

A Campbellsville clock system often combines ideally with a Campbellsville steeple, cupola, or tower. Combination installations are more economical and avoid installation coordination problems. Write or call for complete specifications.

THE OTHER PRODUCTS

Our flexibility in the design and fabrication of architectural metals makes it possible to offer a wide selection of components. In addition to components shown here, there are many other fine examples of our work across the country. Chances are, there is a product from Campbellsville Industries in your community. Send us your project for a quick evaluation and response.

CANOPIES AND MARQUEES

Our flexibility in design and fabrication enables us to provide a variety of canopies and marquees. Our units have been furnished for residences, institutional and commercial buildings, and historic reproductions. A wide range of metal claddings and treatments provide unlimited possibilities.

DORMERS

Dormers from Campbellsville Industries are fabricated to the finest architectural details and proportions. Structural aluminum framing provides a light weight, yet rigidly constructed unit. Decorative dormers are fabricated to fit over a finished roof, whereas functional dormers are often used for ventilation, or can be provided for interior finishing by others.

DOMES

Campbellsville Industries has long been recognized for its expertise in both design and craftsmanship of domes for those buildings that demand exacting design and details. Whether creating a totally new concept or reproducing that historic unit, Campbellsville Industries can meet the challenge.

CROSSES

Creating a beautiful cross is a demanding art. Whether it be reproducing a historic cross, creating a special design, or duplicating an architect's design, Campbellsville Industries will arise to the occasion. Special finishes, including 23 karat gold leafing, are available for all crosses. In addition to custom fabricated crosses, we offer an excellent selection of standard crosses made from 2", 3", 4", 6", and 8" square aluminum tubing.

FINIALS

Ornamental finials often help complete the point of a roof, steeple, cupola, or other towering structure. Finials from Campbellsville are fabricated from aluminum and finished with an industrial vinyl finish, or are fabricated from copper, left to age to a beautiful patina. Sometimes, finials are gilded in a 23 karat gold leaf for a special accent. Anchoring systems can be made adaptable to about any situation, and a lightning protection cable can be provided with the finial. Custom and stock designs are available.

LOUVERS

Louvers from Campbellsville Industries meet many architectural requirements. They are fabricated with fixed blades and have an aluminum insect screen backing. Surface or flush mounting collar optional. Standard louvers are formed from 0.032" aluminum with a variety of stock finishes. Campbellsville Industries can also fabricate special louver designs from a variety of metals – copper, lead-coated copper, stainless steel, turn-coated stainless, etc.

URNS

Urns often combine ideally with railing or balustrade, or can be used as ornamentation for many applications. They are spun from minimum 0.060" aluminum or copper. All thread rod through urn gives added strength and durability. Campbellsville Industries provides many standard designs, plus special designs and sizes.

ALUMINUM COLUMNS

Permanent aluminum columns are decorative as well as functional (load bearing). Many sizes and lengths available, either round or square. Good selection of cast aluminum capitals and bases available. Finishes are baked on.

FIBERGLASS COLUMNS

Our fiberglass columns are specially constructed for all types of decorative and load bearing installations, and have architecturally correct proportions and projections. Fiberglass columns are lightweight, and require very little maintenance. They are ideal for indoor and outdoor applications, because all parts are non-porous, waterproof, and impervious to insect infestation. We offer both plain and fluted units.

WOOD COLUMNS

Custom architectural wood columns are available in Ponderosa pine and clear-heart redwood, totally clear of defects. Staves are constructed using tongue and groove joints, and each stave is tapered to give the column the correct entasis. Correctly styled capitals and bases are available. Wood columns are load bearing. Classical stock wood columns are available for those economy-minded projects that can accommodate less discriminating details.
