Problems/Solutions

• Problem: It doesn't seem to work!

Solution: Perhaps QuickPop has been turned

off. Make sure the switch in the lower left of the window is in the on position.

• Problem: It causes problems with a certain

application.

• Solution: From the preferences dialog you can

create a list of applications that cause problems while using QuickPop. You can add the application to a list of excluded applications (see Customizing QuickPop above). If an application is on this list QuickPop will not be accessible from within that application.
