// BIBTEMPL.WCM (Bibliographical Template Macro)
//*****
// Written by:      Paul H. Caron (February 1993)
// Written for:     WordPerfect for Windows 5.2
// Version Number:  1.0
//*****
// Notes:          I use this macro with a SVGA display, and the Template just about fills
the screen.
//                I don't know what it will look like with a VGA display.
//
//                I created BIBTEMPL.WCM and the accompanying BIBSRCH.WCM to
make
//                entering bibliographical references in a secondary merge file easier
(and prettier)
//                and to provide a standard format for just about any type of information
I choose
//                to include in a bibliography. The macro adds the field names at the top
of a
//                newly-created secondary merge file (including field numbers), which
should make
//                the task of creating a primary merge file easier.
//*****
// Limitations:    I haven't been able to export italics or underlining although I've
included what I think
//                are the appropriate Style numbers in the DialogAddEditBox
parameters. Any
//                suggestions in overcoming this limitation (or any other you may find)
are encouraged.
//                You can reach me (for the next 1½ years) at
G9026163@mcmail.cis.McMaster.CA.
//*****
