

SpellEdit v1.00

Copyright (c) 1992 by Jeff Garzik
ALL RIGHTS RESERVED

This is not intended to be comprehensive documentation - perhaps version 1.1 will have it. "Delete" menu item does not work currently, and is disabled. I would also advise that you save the archive that SpellEdit came in, because if your database becomes corrupt, the B-Tree Filer routines (due to a bug in their library) cannot recover the database.

Enclosed are about 530 net.spells gathers from the Internet, mostly from the Great Net Spellbook.

Use "Help" for more details on running the actual program.
