

# \* \* Introducing WHISKERS™ Professional \* \*

## *Tap the HIDDEN Power of the Mouse & Keyboard with Whiskers™ Professional !!!*

Use Whiskers™ Professional to create a consistent mouse interface for all of your Windows applications. You'll **whisk** through Windows tasks when you assign frequently used commands or key sequences to any of the **23** Mouse Button combinations **OR** any of the over **630** keyboard key combinations. Now all Windows 3.0 applications will get access to the Right & Middle mouse buttons, even ones that weren't designed that way.

You'll even get to design MouseTraps to customize a special button or key combination in a specific application or use MouseTraps to exclude any button that an application may already want to use.

Using the Whiskers™ Professional Keyboard Macro Recorder can eliminate many steps from the commonly used commands in your applications.

Whiskers™ Professional has over 170 **Standard Actions** available to assign to any hot key or hot button combination. Use Whiskers Professional to **Launch Programs**, design custom **Pop-Up Menus** and **Record & Edit Keyboard Macros**. Whiskers Professional even gives three button mice the ability to produce **4 Chord** combinations.

**Standard Actions** include commands like Copy, Cut, Paste, Left Double Click, File Save, Enter, PageUp, SAA system keys, punctuation symbols and over **85 Extended ANSI characters like ½, ® or ¢**.

Whiskers™ Professional is also shipped with sample **MouseTraps** for some of the more popular packages. A MouseTrap is a set of commands that are designed to enhance a particular package. For example, the Excel MouseTrap has the mouse buttons and keyboard keys programmed to settings that will work well with Excel. The Excel MouseTrap will only be active when Excel is the active application. So design MouseTraps for each of your favorite applications or use the sample MouseTraps.

Use the **Keyboard Macro Recorder & Editor** to build a custom macro of the most used key sequences in your favorite application and then assign it to any hot key or hot button combination. You can even add any **Standard Action, Program Launch** or **Pop-Up Menu** to your **Custom Macro** with point & click speed.

Use the **Program Launcher** to launch any application, no matter where your are in the Windows system.

Design your own **Custom Pop-Up Menus** and put any Standard Action, Program Launch or Custom Macro on it. Even put other Pop-Up Menus on it.

Keep your hand on the mouse for those editing jobs by assigning the **Copy, Cut** or **Paste** commands to mouse buttons. The editing jobs will go faster and easier because you don't have to move the cursor to select the Edit Menu, then the Copy, Cut or Paste command, just click the mouse buttons. Even **Undo, File Save** or **File Open** can be assigned to mouse buttons so you keep your hand on the mouse and save steps at the same time.

Do **Chording** on 3 button mice that are supported by a 3 button driver, to increase the flexibility of your mouse. By adding the **4 chording** combinations, the mouse can become twice as effective. Whiskers™ Professional will even simulate a middle button on two button mice.

Whiskers lets you assign the **Left Double Click** sequence to one mouse button. What a rest your fingers and wrist will get. Great if you have **Carpul Tunnel Syndrome** or any injury to the

wrist or hand.

Whiskers™ Professional supports all **Shift, Alt** and **Control** combinations for the Left, Right and Middle mouse buttons and ALL keyboard keys, to provide maximum flexibility for **both** of your input devices.

Use Whiskers™ Professional to access extended **ANSI** character codes. Put special symbols like ¢, ®, ¼, or © on the keyboard for quick access.

Use Whiskers™ Professional to record a keyboard macro, assign it to a mouse button or chord and send it to application running in a **windowed DOS box**.

**System Requirements**--Windows 3.0 or higher, Mouse or other pointing device
