Selecting Paper Size With WordPerfect

And Windows Drivers

Selecting a paper size in WordPerfect for Windows is different depending on the type of printer driver being used. When using a Windows printer driver, the paper size is selected by choosing Setup from the Select Printer dialog box. With Windows printer drivers, the Paper Size dialog box should only be used to add label definitions to the paper size. When using a WordPerfect printer driver, users should select the paper size from the Paper Size dialog box. In this dialog box users can add new paper sizes and edit the current paper sizes. In addition, several different paper sizes can be used in one document with a WordPerfect printer driver.
