

WinQVT/Net

Release Notes

Version 1.31

1. The 'Standard Window' and 'Tall Window' options have been added to the 'Setup' menu. This feature allows you to switch between a normal 24-line window, and a 'tall' window that is sized to contain as many lines as the screen will allow without overflow.
2. Ftp will no longer 'hang' if an attempt is made to connect to a host which is nonexistent or unavailable.
3. The 'lpwd' command has been added to ftp.
4. The ftp window will now redraw when restored or exposed.
5. The scrolling function has been fixed so that a partially occluded window will scroll properly.
6. When the 'ANSI' character set is selected, the fixed-width system font will be used instead of the proportional system font.
