

NetWare 3270 LAN Workstation for Windows Help Index

This index lists all the Help topics available for the NetWare 3270 LAN Workstation for Windows software. Topics are listed alphabetically within these categories: new user help, keyboard shortcuts, menus, commands, procedures, dialog boxes, windows, and communication-link errors.

For information about how to use help, select the Help menu and choose Using Help (<Alt-H-U>).

To get NetWare 3270 LAN Workstation for Windows Help, press the <F1> key while you are in a NetWare 3270 LAN Workstation for Windows window or after you select a command from a NetWare 3270 LAN Workstation for Windows menu.

Note: If you remap the <F1> key in the Unshifted mode while you are in the Config Keyboard Map window to <PF1>, then you cannot get help by pressing the <F1> key. To restore access to the help, map <Ctrl-F1> to the <Wnd> key. You can then get help by pressing the <Ctrl-F1> keys.

To see entries not currently displayed in the Help window, use the scroll bar.

This index lists topics on which help is available. To get information, choose that topic.

Error 590

If this error occurs, it appears in positions 24 to 30 of the OIA status line. See your IBM documentation for descriptions of other error codes.

Indicates that the gateway-to-workstation link is disconnected. See your network administrator.

Error 595

If this error occurs, it appears in positions 24 to 30 of the OIA status line. See your IBM documentation for descriptions of other error codes.

Indicates that the SAA service you are accessing is disconnected. See your network administrator.

What Is NetWare 3270 LAN Workstation for Windows?

NetWare 3270 LAN Workstation for Windows allows you to emulate an IBM 3270 terminal while running Microsoft Windows version 3.0a or 3.1. NetWare 3270 LAN Workstation for Windows operates in a window. After opening this window, you can log on to an IBM host from your workstation as if you were logging on from an IBM 3270 terminal.

When creating sessions, the NetWare 3270 LAN Workstation for Windows software links the workstation with a network server running Novell NetWare version 3.11 or above. This server runs NetWare for SAA version 1.0 or above, which provides a communication link between the workstation and host computer.

For more information, see the *NetWare 3270 LAN Workstation for Windows User's Guide*. The first chapter shows examples of typical network configurations that use the NetWare 3270 LAN Workstation for Windows software.

Printer Session Window

The Printer Session window displays an emulated IBM 3287 printer panel. To use this panel, refer to your IBM 3287 Printer Models 1 and 2 Operator's Guide (IBM part number GA27-3150-2). (This window also has menus with command items, but these are not part of the 3287 panel.) Novell's emulation of the IBM 3287 printer panel is similar to the IBM 3287, except as follows:

- ◆ When the On/Off switch is on, you cannot use the Printer Setup and Exit commands (File menu) and the Config menu. These menus are in the Printer Session window.
- ◆ If you are using the Setup or Index switches in the simulated panel, issue a form feed by using the Form Feed switch on the simulated panel after you use the switches. Otherwise, you will be unable to see the effect of using the Setup or Index switch on the printout.
Use the menus in this window to
- ◆ Open, save, and/or exit sessions (using the File menu)
- ◆ Set up printer drivers (using the File menu)
- ◆ Choose Op Checks, an EBCDIC code page, and the LU3 character case for printing (using the Config menu)
- ◆ Reset unsaved changes to their original values in the current configuration file (using the Config menu)

New Session Command

Displays the Configuration File Selection dialog box that allows you to create a new configuration file or open an existing one.

Related Topics

[Configuration File Selection Dialog Box](#)

[Opening a Session](#)

Save Command

Saves changes you made.

Save As Command

Displays the Save As dialog box that allows you to save changes to the file, rename it, and save it to a different directory.

Related Topics

[Save As Dialog Box](#)

[Saving a File](#)

Printer Setup Command

Displays the Printer Setup dialog box that allows you to choose:

- ◆ The printer to be used for printing
- ◆ The Print Manager (see your Microsoft Windows documentation for an explanation of the Print Manager)
- ◆ Setup options for the printer (see your printer documentation for an explanation of these options or choose the Help button)

You cannot use this command if the On/Off switch in the Printer Session window (simulating a 3287 printer panel) is on. For details about the Printer Setup window, see your IBM 3287 printer documentation.

Related Topics

[Printer Setup Dialog Box](#)

Exit Command

Exits the Printer Session window. You cannot use this command if the On/Off switch in the Printer Session window (simulating a 3287 printer panel) is on. For details about this panel, see your IBM 3287 printer documentation.

Select Code Page Command

For the printer session, displays the Select Code Page dialog box that allows you to choose which EBCDIC code page will be used for printing characters.

You cannot use this command if the On/Off switch in the Printer Session window (simulating a 3287 printer panel) is on. See your IBM 3287 printer documentation for details about this panel.

Related Topics

[Select Code Page Dialog Box](#)

[Choosing the EBCDIC Code Page](#)

Opcode Check Command

Allows you to notify the host to return an opcode check (Op Check). An Op Check can be returned if invalid control characters are detected in the data stream that is sent to the printer and reported to the host. If Op Check is off, invalid control characters may cause a Program Check (PROG error).

You cannot use this command if the On/Off switch in the Printer Session window (simulating a 3287 printer panel) is on. See your IBM 3287 printer documentation for details about this panel.

Dual Case Command

For an LU3 printer session, allows you to choose to print characters in uppercase and/or lowercase. When this mode is off, the LU3 session characters will print in uppercase. This command does not affect LU1 session characters, which always print in dual case.

You cannot use this command if the On/Off switch in the Printer Session window (simulating a 3287 printer panel) is on. See your IBM 3287 printer documentation for details about this panel.

Connection Command

Displays the Connection Configuration dialog box that allows you to choose the server name, service name, user ID, and LU category. The LU category specifies the LU group from which you want to obtain a session. You can choose one of these LU categories:

- ◆ Any Choose if the LU group (Public, Pooled, or Dedicated) can be any.
- ◆ Public Choose for an LU that is neither pooled nor dedicated.
- ◆ Pooled Choose for a group of LUs that have one or more characteristics in common (such as all users in this group will have a Model 2 session with Model 2 displays).
- ◆ Dedicated Choose for an LU that has a unique configuration (such as a reserved address for a specific user).

Related Topic

[Connection Configuration Dialog Box](#)

Reset Config Command

Displays the Reset dialog box that allows you to reset all changes you made in the Config menu of the Printer Session window to their configuration file values, if you have not yet saved your changes.

You cannot use this command if the On/Off switch in the Printer Session window (simulating a 3287 printer panel) is on. See your IBM 3287 printer documentation for details about this panel.

Related Topic

[Reset Dialog Box](#)

Connection Reminder Command

Reminds you of the server name, service name, LU name, and SLU ID for the current session.

New Command

Displays the New Keypad dialog box that allows you to enter the number of keys for a new keypad as rows by columns (rows X columns). When saved, a new file with the *.pad* extension is created. You can define up to 7 keys per row or column. You can configure up to 49 keys.

Related Topic

[New Keypad Dialog Box](#)

Open Command

Displays the Open File dialog box that allows you to open any keyboard or keypad file. This file can be used for

- ◆ Entering data into the Presentation Space (under the Windows menu)
- ◆ Remapping keys (under the Config menu)

Keyboard files have a *.kyb* extension; keypad files have a *.pad* extension. The file you open can be a Novell-provided keyboard or keypad file, or a file you created by remapping the keyboard or keypad. To create a new file, save your changes and rename it.

Related Topics

[Open File Dialog Box](#)

[Opening a Keyboard or Keypad File](#)

Save Command

Saves changes you made.

Save As Command

Displays the Save As dialog box that allows you to save changes to the keyboard or keypad map file, rename it, and save it to a different directory.

Related Topics

[Save As Dialog Box](#)

[Saving a File](#)

Exit Command

Exits the keyboard or keypad window, allowing you to save changes.

Cut Command

Places the selected keyboard or keypad key into the buffer. Some keys cannot be cut. This command is chosen from the keyboard or keypad Edit menu.

Related Topic

[Cutting and Pasting Keyboard/Keypad Keys](#)

Copy Command

Copies a selected key from the

- ◆ Keyboard to the keyboard buffer
- ◆ Keypad to the keypad buffer

Some keys cannot be copied. This command is chosen from the keyboard or keypad Edit menu.

EBCDIC code page, APL code page, or function list keys may be copied to the keyboard by selecting the code page or function list key and dragging it onto the keyboard. The Copy command does not work for copying code page or function list keys.

Related Topics

[Copying and Pasting Keyboard/Keypad Keys](#)

[Copying Code Page and Function List Keys](#)

Exchange Command

Exchanges the selected keyboard key with the key in the keyboard buffer. Also exchanges the selected keypad key with the key in the keypad buffer.

Some keys cannot be exchanged. This command is chosen from the keyboard or keypad Edit menu.

Related Topic

[Exchanging Keyboard/Keypad Keys](#)

Paste Command

Places the key from the keyboard buffer on a selected keyboard or keypad key. You can choose this command from the Edit menu of the keyboard or keypad (Config Keyboard Map or Config Keypad Map) opened from the Config menu. You cannot paste keys to the keyboard or keypad (Active Keyboard Map or Active Keypad Map) opened from the Window menu.

Related Topics

[Cutting and Pasting Keyboard/Keypad Keys](#)

[Copying and Pasting Keyboard/Keypad Keys](#)

Undo Command

Cancels the last edit change you made to the keyboard or keypad. It does not work if you have already saved the change. To undo edit changes, choose Undo from the Edit menu (<**Alt-E-U**>).

Base (Non-APL) Command

Changes the keyboard mapping to the standard keyboard layout. In this keyboard mapping, the Shifted, Unshifted, Alt-Shifted or Control-Shifted modes can be displayed. Either the CapsLock or Num Lock mode can be on, both modes can be on, or both modes can be off.

APL Command

Changes the keyboard mapping to the APL symbol set. To support the APL symbol set, the workstation must have a color monitor, and the display adapter must be an EGA (with at least 128 KB of memory), VGA, or built-in adapter of any PS/2 model.

In this key mapping, the Shifted, Unshifted, Alt-Shifted or Control-Shifted modes can be on or off. Either the CapsLock or Num Lock mode can be on, both modes can be on, or both modes can be off.

Unshifted Command

Changes the keyboard mapping to display the characters produced in the Unshifted state.

Shifted Command

Changes the keyboard mapping to display the characters produced in the Shifted state. If you choose the Shift Lock option box while Caps Lock is on, all keys are locked in the Shifted mode. The Shift Lock option box is located in the Keyboard Map window below the File menu.

Alt-Shifted Command

Displays the keyboard layout in the Alt-Shifted state.

Ctrl-Shifted Command

Displays the keyboard layout in the Control-Shifted state.

Caps Lock Command

Changes the lowercase letters on the keyboard to uppercase. This function works in Base or APL mode, and can be used in Shifted, Unshifted, Control-Shifted, or Alt-Shifted mode. Choose this command with the Num Lock command, or by itself.

Num Lock Command

Changes the mapping of the numeric keypad from function keys to numbers. This function works in Base or APL mode and can be used in Shifted, Unshifted, Control-Shifted, or Alt-Shifted mode. Choose this command with the CapsLock command, or by itself.

Function List Command

Under the keyboard or keypad Display menu, this command displays the Function List dialog box that consists of 3270 functions. You can copy functions from the Function List to the keyboard or keypad, but you cannot remap them.

Related Topics

[Function List Window](#)

[Copying Code Page and Function List Keys](#)

EBCDIC Code Page Command

Under the keyboard or keypad Display menu, this command displays the EBCDIC Code Page dialog box that consists of the characters and symbols of the current code page. You can copy these characters or symbols to the keyboard or keypad, but you cannot remap them.

When you choose the code page's Dead Key command, the code page dead keys are highlighted. You can use a dead key to create a combination of a character and symbol. (For example, you may want to copy an accent from the code page onto a keyboard letter to create an accented letter that is used in your country.)

Related Topics

[EBCDIC Code Page Dialog Box](#)

[Copying Dead Keys](#)

[Copying Code Page and Function List Keys](#)

APL Code Page Command

Under the keyboard or keypad Display menu, this command displays the APL code page that consists of APL characters and symbols. You can copy these characters or symbols from the code page to the keyboard or keypad, but you cannot remap them.

Related Topics

[APL Code Page Dialog Box](#)

[Copying Code Page and Function List Keys](#)

International Command

Displays the International Keyboard Map dialog box that allows you to choose a Novell-provided keyboard file (which has a *.kyb* extension) by its directory path, keyboard size, and language mapping.

After you open this file, you can select keys with the mouse to enter data into the Presentation Space of the Session window or remap the online keyboard.

If you remap the keyboard, you can save your changes, rename the file, and relocate it into a different directory. The next time you need this keyboard map, use the Open command to open this new file.

Related Topics

[International Keyboard Map Dialog Box](#)

[Opening a Novell-Provided Keyboard File](#)

Active Keyboard Map Window/Config Keyboard Map Window

The Active Keyboard Map window displays the keyboard that you can use to enter data into the Presentation Space. To enter data, choose the required characters using the left mouse button or use the physical keyboard.

The Config Keyboard Map window displays the keyboard that you can remap using the Cut, Copy, Paste, and Exchange commands in the Edit menu. Keys may be copied from the keyboard to the keypad.

Related Topic

[Configuring the Keyboard](#)

Active Keypad Map Window/Config Keypad Map Window

The Active Keypad Map window displays the keypad that you can use to enter data into the Presentation Space. To enter data, choose the required characters using the left mouse button or use the physical keyboard.

The Config Keypad Map window displays the keypad that you can remap using the Cut, Copy, Paste, and Exchange commands in the Edit menu. Keys may not be mapped out of the keypad.

Related Topic

[Configuring the Keypad](#)

Session Window

Displays the 3270 host session. This session includes Presentation Space data and OIA symbols. Use the menus in this window to

- ◆ Open or save session configuration files
- ◆ Exit an open session
- ◆ Edit the Presentation Space (copy and paste only)
- ◆ Change screen fonts, colors, the EBCDIC code page, keyboard mapping, and keypad mapping
- ◆ Choose numeric lock, Op Checks, form feeds, and screen updating (refresh)
- ◆ Reset the values of the configuration file you opened
- ◆ Transfer files between the host and workstation
- ◆ Use the mouse instead of a keyboard to enter data into the Presentation Space

New Session Command

Displays the Configuration File Selection dialog box that allows you to create a new configuration file or open an existing one.

Related Topics

[Configuration File Selection Dialog Box](#)

[Opening a Session](#)

Save Command

Saves changes you made.

Save As Command

Displays the Save As dialog box that allows you to save changes to the file, rename it, and save it to a different directory.

Related Topics

[Save As Dialog Box](#)

[Saving a File](#)

Exit Command

Exits the Session window, allowing you to save changes.

Copy Command

Copies data selected from the Presentation Space of a Session window to the Windows clipboard.

Related Topic

[Copying and Pasting Presentation Space Data](#)

Paste Command

Places data selected from the Windows clipboard into any window.

Related Topic

[Copying and Pasting Presentation Space Data](#)

Send Command

Displays the Send Session window that allows you to choose a file to transfer from the workstation to the host. You can send multiple files simultaneously, one from each session. File transfer can run in the background, allowing you to continue working in other windows while the transfer is being executed.

Related Topics

[Send Session Window](#)

[Sending a File to the Host](#)

Receive Command

Displays the Receive Session window that allows you to choose a file to transfer from the host to the workstation. You can receive multiple files simultaneously, one from each host session. File transfer can run in the background, freeing you to do other Windows work.

Related Topics

[Receive Session Window](#)

[Receiving a File from the Host](#)

Transfer Command

Not being implemented for this release. Designed to work with CICS. Command will display under Transfer menu of Session window. Context number is 540.

Related Topics

(Fonts) 24x80 Screen Mode Command

Displays the 24x80 Screen Mode dialog box that allows you to resize screen fonts for the 24x80 mode. This mode is assigned in the host Bind command. The screen size is defined as the number of lines (rows) by the number of characters (columns) per line. If you are not sure if this mode is active, ask your IBM systems programmer.

Before resizing screen fonts, read the Setting Up the Session Viewing Area section in Chapter 5 of the *NetWare 3270 LAN Workstation for Windows User's Guide* for additional information.

Related Topics

[\(Fonts\) 24x80 Screen Mode Dialog Box](#)

[Resizing Screen Fonts](#)

(Fonts) Adjust to Fit Command

Enables or disables automatic font resizing. If a check appears to the left of the Adjust to Fit command, automatic font resizing is enabled; if the check is cleared, automatic font resizing is disabled.

Automatic font resizing chooses a font size from the font sizes installed in your copy of Microsoft Windows. The chosen font size is determined by the size and shape of the window.

If the shape of the window is close to being proportional to the session display area, the program will choose the largest font size that allows all session characters to appear in the window. The program may also adjust the size of the window to be exactly proportional. If the window is too small to display all the session characters at the smallest font size, scroll bars appear. You can use the scroll bars to view other parts of the window.

If the shape of the window is tall and narrow or short and wide, the program selects the largest font size that fits the longest dimension. For example, when the window is tall and narrow, the program selects the largest font size that allows all rows in the session window to appear. Scroll bars appear at the bottom of the window so that you can scroll to display hidden character columns.

Related Topic

[Resizing Screen Fonts](#)

(Fonts) Large Screen Mode Command

Displays the Large Screen Mode dialog box that allows you to resize screen fonts for the large screen mode. This mode is assigned in the host Bind command. The screen size is defined as the number of lines (rows) by the number of characters (columns) per line. If you are not sure if this mode is active, ask your IBM systems programmer.

Before resizing screen fonts, read the Setting Up the Session Viewing Area section in Chapter 5 of the *NetWare 3270 LAN Workstation for Windows User's Guide* for additional information.

Related Topics

[Resizing Screen Fonts](#)

Colors Command

For the workstation's color monitor, this command displays the 3270 Workstation Color Control dialog box that allows you to

- ◆ Change host-assigned base, default extended, extended, background/blinking, and OIA colors
- ◆ Change your Presentation Space colors to monochrome
- ◆ Choose 3270-type colors or regular PC colors
- ◆ Redefine a color square in the dialog box to any of 256 colors (if you have a hardware driver that supports 256 colors)
- ◆ Redefine any Session window color based on the color squares
- ◆ Reset colors to adapter default colors

Connection Command

Displays the Connection Configuration dialog box that allows you to choose the server name, service name, user ID, and LU category. The LU category specifies the LU group from which you want to obtain a session. You can choose one of these LU categories:

- ◆ Any Choose if the LU group (Public, Pooled, or Dedicated) can be any.
- ◆ Public Choose for an LU that is neither pooled nor dedicated.
- ◆ Pooled Choose for a group of LUs that have one or more characteristics in common (such as all users in this group will have a Model 2 session with Model 2 displays).
- ◆ Dedicated Choose for an LU that has a unique configuration (such as a reserved address for a specific user).

Related Topic

[Connection Configuration Dialog Box](#)

Terminal Setup Command

Displays the Terminal Setup dialog box that allows you to choose numeric lock, opcode checks, form feeds, and/or screen updating (refresh) as follows:

- ◆ Numeric lock locks the keyboard when an attempt to enter non-numeric data into a numeric field is made.
- ◆ Opcode checks (Op Checks) can be returned by the host if invalid control characters are detected in the data stream and are reported to the host, or a Query Retry State error is reported to the host. If checking is off, invalid control characters may display as hyphens.
- ◆ Form feeds determine blank page ejection during printing of screens.
- ◆ Screen updating (refresh) determines how the screen is painted with host data.

Connection Reminder Command

Reminds you of the server name, service name, LU name, and SLU ID for the current session.

Send Session Window/Receive Session Window

These windows allow you to transfer files between your workstation and the host. Use the Send Session window to send a file to the host; use the Receive Session window to receive a file from the host.

The Send Session window allows you to choose the host filename, which file will be sent, and where the file is located. After you send the file, status information displays to indicate when file transfer is complete, the number of files sent, and the total number of bytes sent.

The Receive Session window allows you to choose where the file received from the host will be placed, and the host filename. After the file is received, status information displays to indicate the total number of bytes received.

Before you choose the Send or Receive button, you may want to choose options for the file you are transferring. See the Options command, the Sending a File to the Host procedure, or the Receiving a File from the Host procedure for more information about options.

[Sending a File to the Host](#)

[Receive Command](#)

[Options Command \(Receive\)](#)

[Receiving a File from the Host](#)

Options Command

For the transfer (send) function, displays the Send/Receive Options dialog box that allows you to choose CMS, TSO, or CICS options for the file to be sent to the host. See your CMS , TSO, or CICS documentation for an explanation of these options.

These options include file append, ASCII or binary file format, Carriage Return Line Feed (CRLF) recognition as record separators, record length, block size, packet size, timeout, and record format.

Timeout is the maximum amount of time, in seconds, that the file transfer program waits for a response from the host before an error message appears and transfer terminates.

Timeout Retries indicates file transfer delay by displaying the number of times the host response time was greater than 30 seconds.

Note: A timeout value of 150 seconds is recommended for large packets, large blocks, or slow communication lines.

For TSO, you can also enter the amount of space to be allocated for the file and how this space is to be allocated.

For CICS, you can enter the CICS Options/Comments. These are special CICS options, enclosed in parentheses and followed by comments (if there are any). If no special options are needed, but comments need to be sent, enter empty parentheses without anything inside of them, and then enter the comments.

Commands

Use the following commands in NetWare 3270 LAN Workstation for Windows:

Command

Keyboard Shortcut and Function

Alt-Shifted (Active Keyboard Map Window)

<Alt> <A> <K> <Alt> <F> <I>
Changes the keyboard to the characters you use with the **<Alt> <Shift>** keys.

Alt-Shifted (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <F> <I>
Changes the keyboard to the characters you use with the **<Alt> <Shift>** keys.

APL (Active Keyboard Map Window)
<A>

<Alt> <W> <K> <Alt> <S>

In APL mode, remaps the keyboard to APL characters and symbols.

APL (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <S> <A>

In APL mode, allows you to remap APL characters and symbols on the keyboard.

APL Code Page (Config Keyboard Map Window)
<A>

<Alt> <C> <K> <Alt> <D>

Displays the APL Code Page so that APL characters can be copied to the keyboard.

APL Code Page (Config Keypad Map Window)
<A>

<Alt> <C> <P> <Alt> <D>

Displays the APL Code Page so that APL characters can be copied to the keypad.

Base (Non-APL) (Active Keyboard Map Window)

<Alt> <W> <K> <Alt> <S>

Displays a keyboard with the national keyboard characters and symbols that you can activate with a mouse.

Base (Non-APL) (Config Keyboard Map Window)

**<Alt> <C> <K> <Alt> <S> **
Displays a keyboard with the

Caps Lock (Active Keyboard Map Window)
<C>

national keyboard layout that you can remap.

<Alt> <W> <K> <Alt> <S>

Displays the keyboard alphabet in uppercase.

Caps Lock (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <S> <C>
Displays the keyboard alphabet for remapping in uppercase.

Code Page

<Alt> <C> <G>
Displays the EBCDIC Code Page settings used during the session.

Colors

<Alt> <C> <C>
Changes and/or redefines custom colors in the session.

Connection (Printer Session Window)

<Alt> <O> <C>
Specifies the server name, service name, user ID, and LU category.

Connection (Session Window)

<Alt> <C> <N>
Specifies the server name, service name, user ID, and LU category.

Connection Reminder

<Alt> <U> <C>
Reminds you what the server name, service name, user ID, and LU category are.

Copy

<Alt> <E> <O>
Copies session data to the Windows Clipboard.

Copy (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <E> <O>
Copies keyboard keys to the keyboard buffer.

Copy (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <E> <O>
Copies keypad keys to the keypad buffer.

Ctrl-Shifted (Active Keyboard Map Window)
<K>

<Alt> <W> <K> <Alt> <C>
Displays the keyboard characters produced in the Control-Shifted

Ctrl-Shifted (Config Keyboard Map Window)

state.

<Alt> <C> <K> <Alt> <S> <R>

Allows you to remap the keyboard characters defined in the Control-Shifted state.

Cut (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <E> <C>

Places the selected keyboard key into the keyboard buffer.

Cut (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <E> <C>

Places the selected keypad key into the keypad buffer.

Dual Case

<Alt> <O> <D>

Sets the printer to print uppercase and lowercase letters.

EBCDIC Code Page (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <D> <E>

Displays the EBCDIC Code Page.

EBCDIC Code Page (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <D> <E>

Displays the EBCDIC Code Page.

Exchange (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <E> <X>

Exchanges a keyboard key with the key in the keyboard buffer.

Exchange (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <E> <X>

Exchanges a keypad key with the key in the keypad buffer.

Exit (Printer Session Window)

<Alt> <I> <X>

Exits the printer session.

Exit (Session Window)

<Alt> <F> <X>

Exits the session, keyboard, or keypad.

(Fonts) 24x80 Screen Mode

<Alt> <C> <F> <2>

Resizes screen fonts for the 24x80 Screen mode.

(Fonts) Adjust to Fit

<Alt> <C> <F> <A>

Selects Adjust to Fit font resizing.

(Fonts) Large Screen Mode

<Alt> <C> <F> <L>

Resizes screen fonts for Large Screen mode.

Function List (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <D> <L>

Displays the 3270 functions you can copy to the keyboard.

Function List (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <D> <L>

Displays the 3270 functions you can copy to the keypad.

Function List (Session Window)

<Alt> <W> <L>

Displays the 3270 functions you can activate with your mouse.

International (Active Keyboard Map Window)

<Alt> <W> <K> <Alt> <F> <I>

Opens a Novell-provided file that changes the keyboard map to the layout of another country.

International (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <F> <I>

Opens a Novell-provided file that changes the keyboard map to the layout of another country. You can then remap this layout.

Keyboard (Active Keyboard Map Window)

<Alt> <W> <K>

Displays the keyboard you can use to enter data into the session using a mouse.

Keyboard (Config Keyboard Map Window)

<Alt> <C> <K>

Displays the keyboard you can remap.

Keypad (Active Keypad Map Window)

<Alt> <W> <P>

Displays the keypad you can use to type data into the session, or execute 3270 functions.

Keypad (Config Keypad Map Window)

<Alt> <C> <P>

Displays the keypad you can remap.

New

<Alt> <C> <P> <Alt> <F> <N>

Opens a new keypad, after you select its size.

New Session (Printer Session Window)

<Alt> <I> <N>

New Session (Session Window)

Opens a new printer session.

<Alt> <F> <N>

Opens a new display session.

Num Lock (Active Keyboard Map Window)

<M>

<Alt> <W> <K> <Alt> <S>

Changes the keyboard's numeric keypad to allow numbers to be entered.

Num Lock (Config Keyboard Map Window)

<M>

<Alt> <C> <K> <Alt> <S>

Changes the keyboard's numeric keypad to numbers you can remap.

Opcode Check

<Alt> <O> <O>

Specifies if the host will return opcode checks.

Open (Active Keyboard Map Window)

<O>

<Alt> <W> <K> <Alt> <F>

Displays the keyboard map of any keyboard file you open. You can then select the keys with your mouse to type data into the session.

Open (Active Keypad Map Window)

<O>

<Alt> <W> <P> <Alt> <F>

Displays the keypad map of any keypad file you open. You can then type data into the session or execute 3270 functions.

Open (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <F> <O>

Displays the keyboard map of any keyboard file you open. You can then remap this keyboard.

Open (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <F> <O>

Displays the keypad map of any keypad file you open. You can then remap this keypad.

Options (Receive Session Window)

<O>

<Alt> <T> <R> <Alt> <N>

Sets CMS, TSO, or CICS options for the file to be received at the workstation from the host.

Options (Send Session Window)
<O>

<Alt> <T> <S> <Alt> <N>

Sets CMS, TSO, or CICS options for the file to be sent from the workstation to the host.

Paste

<Alt> <E> <P>

Places data from the Windows clipboard to any open session.

Paste (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <E> <P>

Places the key in the keyboard buffer to a keyboard or keypad key.

Paste (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <E> <P>

Places the key in the keypad buffer to a keypad key.

Receive

<Alt> <T> <R>

Receives a file from the host.

Reset Configuration (Printer Session Window)

<Alt> <O> <R>

In the printer session, cancels changes you made and restores default settings.

Reset Configuration (Session Window)

<Alt> <C> <R>

In the display session, cancels changes you made and restores default settings.

Save (Printer Session Window)

<Alt> <I> <A>

Saves changes you made to the printer session.

Save (Session Window)

<Alt> <F> <A>

Saves changes you made to the session, keyboard, or keypad.

Save As (Printer Session Window)

<Alt> <I> <A>

Saves changes you made to the printer session, renames the file, and/or saves it to a different directory.

Save As (Session Window)

<Alt> <F> <A>

Exits the session, keyboard, or keypad. Also renames the file, and/or saves it to a different directory.

Select Code Page

<Alt> <O> <S>

Displays the EBCDIC Code Page settings for printing so that you can change them.

Send

<Alt> <T> <S>

Sends a file from the workstation to the host.

Setup

<Alt> <I> <P>

Sets printer options.

Shifted (Active Keyboard Map Window)

<Alt> <W> <K> <Alt> <S> <I>

Displays the keyboard layout in the Shifted state.

Shifted (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <S> <I>

Displays the keyboard layout in the Shifted state.

Terminal Setup

<Alt> <C> <T>

Displays numeric lock, opcode check, form feed, and screen update settings you can change.

Undo (Config Keyboard Map Window)

<Alt> <C> <K> <Alt> <E> <U>

Cancels the last change you made to the keyboard.

Undo (Config Keypad Map Window)

<Alt> <C> <P> <Alt> <E> <U>

Cancels the last change you made to the keypad.

Unshifted (Active Keyboard Map Window)
<N>

<Alt> <W> <K> <Alt> <S>

Displays the keyboard layout in the Unshifted state.

Unshifted (Config Keyboard Map Window)
<N>

<Alt> <C> <K> <Alt> <S>

Displays the keyboard layout in the Unshifted state.

Changing Colors Supported by the Hardware Driver

This procedure redefines any of the 16 color squares in the color palette (in the 3270 Workstation Color Control dialog box) to any of the 256 colors supported by the hardware driver. You can only redefine a color square if you have a hardware driver that supports 256 colors.

1. Choose the Colors command from the Config menu in the Session window (<Alt> <C> <C>). The 3270 Workstation Color Control dialog box appears and the Define button is enabled.
2. Choose the Pallette mode as instructed in the Choosing 3270 Host or Regular PC Colors procedure.
3. Select the color square in which you want to redefine a color.
4. Choose the Define button. The Define Custom Color dialog box displays.
5. Scroll the Red, Green, and Blue boxes until the color you want displays in the color rectangle. The value of the Red, Green, or Blue box displays next to the rectangle. (To obtain a "pure" red, green, or blue, set its value to 255 and the other two colors to 0.)
6. Choose OK. The Define Custom Color dialog box disappears and the color square changes to match the color you set in the Define Custom Color dialog box.

Note: To *cancel* your changes, choose Cancel. The dialog box disappears. To *reset* the current colors to the default colors of the workstation adapter, choose Optimize and then choose OK. The colors change to the adapter's default colors.

7. Choose OK. The 3270 Workstation Color Control dialog box disappears and your changes become effective in the Session window.

[Changing Host-Assigned Colors](#)

Changing Host-Assigned Colors

This procedure changes any host-assigned color in the Presentation Space of the Session window so that it matches any of the 16 color squares in the color palette of the 3270 Workstation Color Control dialog box.

1. Choose the Colors command from the Config menu in the Session window (**<Alt> <C> <C>**). The 3270 Workstation Color Control dialog box appears.
2. Select an option in the base, default extended, extended, background/blinking, or OIA color category.
3. Select the needed color from the color palette (one of the 16 color squares on the dialog box). The selected option changes to match the color of the selected palette square.
4. Repeat Steps 2 and 3 until you complete all needed color changes.

Note: To *cancel* your changes, choose Cancel. The dialog box disappears.

5. Choose OK. The dialog box disappears and your changes become effective in the Session window.

Changing Presentation Space Colors to Monochrome

For color monitors, this procedure changes the Presentation Space colors to black and white.

1. Choose the Colors command from the Config menu in the Session window (**<Alt> <C> <C>**). The 3270 Workstation Color Control dialog box appears.
2. Select the Monochrome button in the Terminal Mode box. A black dot fills this button, and the dialog box changes to display only the monochrome, background/blinking, and OIA color categories. The monochrome category displays the Normal option in gray and the Intensified option in white.

Note: To *cancel* your changes, choose Cancel. The dialog box disappears.

3. Choose OK. The dialog box disappears and your changes become effective in the Presentation Space of the Session window.

Choosing 3270 Host or Regular PC Colors

This procedure allows you to choose either 3270 host colors or regular PC colors for the 16 squares of the color palette in the 3270 Workstation Color Control dialog box. The host colors are brighter than the PC colors.

1. Choose the Colors command from the Config menu in the Session window (**<Alt>** **<C>** **<C>**). The 3270 Workstation Color Control dialog box appears.
 2. Choose one of these buttons from the Palette Mode box:
 - ◆ To specify 3270 colors, select Host.
 - ◆ To specify the regular PC colors, select PC.
A black dot fills this button.
- Note:** To *cancel* your changes, choose Cancel. The dialog box disappears.
3. Choose OK. Your changes become effective in the palette and the dialog box disappears.

Choosing the EBCDIC Code Page

This procedure allows you to choose the EBCDIC code page you need for your current session. The code page settings for the Printer Session window and the Session window must match.

1. To display the Select Code Page dialog box, choose one of these commands:
 - ♦ Select Code Page command from the Config menu in the Printer Session window (**<Alt> <C> <S>**).
 - ♦ Code Page command from the Config menu in the Session window (**<Alt> <C> <G>**).
2. Click the code number box arrow to display the choices.
3. Click the scroll bar arrows to scroll the full list.
4. Choose a code page. Your choice displays in the code number box.
5. Choose OK. After the dialog box disappears, save your changes.
6. If you chose the Select Code Page command in Step 1, now choose the Code Page command from the Session window and match code page settings by repeating Steps 2 to 5. If you chose the Code Page command in Step 1, now choose the Select Code Page command from the Printer Session window and match code page settings by repeating Steps 2 to 5.

Note: To *cancel* your choice, choose Cancel. The dialog box disappears.

Copying and Pasting Keyboard/Keypad Keys

This procedure copies a keyboard or keypad key to another keyboard or keypad location.

1. Choose one of these commands from the Config menu in the Session window:
 - ◆ Keyboard command (**<Alt> <C> <K>**)
 - ◆ Keypad command (**<Alt> <C> <P>**)
The keyboard or keypad appears.
2. Select the keyboard or keypad key you want to copy.
3. Choose the Copy command from the Edit menu to copy the selected key to the keyboard or keypad buffer (**<Alt> <E> <O>**).
4. Select the destination key.
5. Choose the Paste command from the Edit menu to copy the key in the keyboard or keypad buffer to its destination (**<Alt> <E> <P>**).

Note: To *undo* the cut or paste, choose the Undo command from the Edit menu (**<Alt> <E> <U>**).

Copying Code Page and Function List Keys

This procedure copies a key from the Function List, EBCDIC Code Page, or APL Code Page to another keyboard or keypad location.

1. Choose one of these commands from the Config menu in the Session window:
 - ◆ Keyboard command (<Alt> <C> <K>)
 - ◆ Keypad command (<Alt> <C> <P>)
The keyboard or keypad appears.
2. Choose one of these commands from the keyboard or keypad Display menu:
 - ◆ APL Code Page command (<Alt> <D> <A>) to display the APL code page
 - ◆ EBCDIC Code Page command (<Alt> <D> <E>) to display the EBCDIC code page
 - ◆ Function List command (<Alt> <D> <L>) to display the list of 3270 functions
3. Using the left mouse button, select the key you want to copy and drag it to its new location on the keyboard or keypad.

Note: To *undo* the copy, choose the Undo command from the Edit menu (<Alt> <E> <U>).

Copying Dead Keys

This procedure copies a dead key from the EBCDIC Code Page to the keyboard or keypad.

1. Choose one of these commands from the Config menu in the Session window:
 - ◆ Keyboard command (**<Alt> <C> <K>**)
 - ◆ Keypad command (**<Alt> <C> <P>**)
The keyboard or keypad appears.
2. Choose the EBCDIC Code Page command (**<Alt> <D> <E>**) from the keyboard or keypad Display menu. The EBCDIC code page appears.
3. Choose the Dead Key command (**<Alt> <D>**) from the code page. The dead keys are highlighted.
4. Using the left mouse button, drag the dead key you need to its new keyboard or keypad location. The dead key symbol appears on that key.

Note: To *undo* the copy, choose the Undo command from the Edit menu (**<Alt> <E> <U>**).

Opening a Novell-Provided Keyboard File

This procedure opens any keyboard file provided by Novell. If you save and rename the file after remapping the keyboard, use the Open command to open it next time.

1. Choose one of these commands in the Session window:
 - ◆ Keyboard command from the Config menu (<Alt> <C> <K>) to display the Config Keyboard Map window
 - ◆ Keyboard command from the Window menu (<Alt> <W> <K>) to display the Active Keyboard Map window
2. Choose the International command from the File menu (<Alt> <F> <I>). The International Keyboard Map dialog box appears.
3. Choose the keyboard size by selecting the Small or Enhanced button. A black dot fills this button.
4. Choose the language from the Languages drop-down list box. The list disappears and your language choice displays in the Language box. (If no languages are listed, choose the directory where the Novell-provided keyboard language files reside.)
5. Choose OK. The dialog box disappears and the keyboard now displays the character set and keyboard size of the language you chose.

Note: To *cancel*, choose Cancel. The dialog box disappears.

Related Topics

[International Command](#)

Opening a Keyboard or Keypad File

This procedure opens any keyboard or keypad file, whether it is a Novell-provided file or a file you created by remapping the keyboard. Novell provides several keyboard files (each with the .kyb extension) that you can choose. There is only one keypad file that Novell provides, called *STD1.PAD*.

1. Choose the Open command from the File menu (**<Alt> <F> <O>**) and the Open File dialog box appears and displays the current filename and location.
2. Specify the filename and location as follows:
 - a. To display the directory where the file resides in the Open File text box, select the directory letter from the Files In list box. Enter the directory path followed by the filename in the Open File Name text box.
 - b. Choose the filename and extension from the Files In list box. The filename and extension display in the Open File Name text box. If needed, enter the drive letter followed by the directory path before the filename in the Open File Name text box.
3. Choose the Open button. The keyboard/keypad map of the filename you specified in Step 2 displays on the online keyboard or keypad.

Note: To *cancel* your changes before you choose the Open button, choose Cancel. The Open File dialog box disappears.

Opening a Session

This procedure opens a new session.

1. To open a printer session in the Printer Session window or the Session window, choose the New Session command from the File menu (**<Alt> <F> <N>**).
The Configuration File Selection dialog box appears.
 2. Specify the filename and location as follows:
 - a. To display the directory where the file resides in the Filename box, select the directory letter from the Directories list box. Enter the directory path followed by the filename in the Filename text box.
 - b. Choose the filename and extension from the Files list box. The filename and extension display in the Filename text box. If needed, enter the drive letter followed by the directory path before the filename in the Filename text box.
- Note:** To *cancel* your changes, choose Cancel. The Configuration File Selection dialog box disappears.
3. Choose the OK button. The new session displays in the Printer Session or Session window.

Receiving a File from the Host

This procedure transfers a file from the host to the workstation.

1. Choose the Receive command from the Transfer menu in the Session window (<Alt> <T> <R>). The Receive Session window appears.
2. Enter the filename in the Local text box, or choose the name from the Filename list box. The filename displays in the Local text box.
3. Enter the host name of the file that will be sent in the Host text box.
4. Specify the source drive letter and path in the Directory list box (if the filename was not selected from the Filename box).
5. Choose the Options command from the Config menu in the Receive Session window to specify file transfer options (<Alt> <N> <O>). The Send/Receive Options dialog box appears.
6. Specify CMS, TSO, or CICS options (referring to your CMS, TSO, or CICS documentation) as follows:
 - a. Select the CMS, TSO, or CICS option button from the Host Type box. A black dot fills this button.
 - b. Select the Append to Data Set, ASCII, and/or CRLF check box as needed. An X displays.
 - c. Enter the packet size in the Packet Size text box.
 - d. Enter the timeout in the Timeout text box.
 - e. The Host Program Name text box lists the name of the file transfer program installed on the host. The default name is IND\$FILE. If the name of your host program is different, enter the name of your host program in this box. (When the host program name is different, it is usually because the host language does not include the \$ character.)
 - f. Choose the language in the Language list box.
 - g. Enter the directory path of the language translation table (NVLXXLAT.IBM) in the Language Table Path text box, if it is different than the default path displayed.
 - h. Choose OK. The dialog box disappears and the Receive Session window reappears.
 - i. Press the Receive button.

The Bytes Received number is updated as file transfers.

Timeout Retries increments if the PC has not responded to the host transmission within the timeout period set internally (about 30 seconds). If the host does not respond within the maximum timeout set by the user in the Send/Receive Session Options dialog box (a maximum of 300 seconds), then file transfer is cancelled and an error message appears.

Note: Choosing Cancel or Close before choosing the Receive button exits file transfer and returns you to the host session. If you cancel after choosing the Receive button and abort file transfer, you might need to press the <Enter> and/or <PF2> key to get the READY prompt from the host.

Send/Receive Options Dialog Box

Resizing Screen Fonts

There are two ways to resize the screen fonts in the Presentation Space:

- ◆ Automatic font resizing adjusts the font size according to the size of the Session window.
- ◆ Manual font sizing directly sets the font sizes for the 24x80 Screen Mode and Large Screen Mode.

To enable or disable automatic font resizing:

1. Choose the Fonts command in the Config menu of the Session window (**<Alt> <C> <F>**).

Automatic font resizing is enabled when a check appears to the left of the Adjust to Fit command. When automatic font resizing is enabled, the 24x80 Screen Mode and Large Screen Mode commands are disabled.

2. Choose the Adjust to Fit command (**<Alt> <C> <F> <A>**) to enable or disable this feature.

The Adjust to Fit command alternately enables or disables the feature. For example, if automatic font resizing was enabled, the Adjust to Fit command disables the feature.

To select specific font sizes for the Session window:

1. If automatic font resizing is enabled, disable automatic font resizing as described above.
2. Choose the Fonts command in the Config menu of the Session window (**<Alt> <C> <F>**); then choose one of these:

- ◆ To resize the screen font for the 24x80 Screen mode, choose the 24x80 Screen Mode command (**<Alt> <C> <F> <2>**). The 24x80 Screen Mode dialog box appears, displaying the current font size above the font sizes list.

- ◆ To resize the screen font for the Large Screen mode, choose the Large Screen Mode command (**<Alt> <C> <F> <L>**). The Large Screen Mode dialog box appears, displaying the current font size above the font sizes list.

3. Scroll through the full list of font sizes.
4. Select a size.
5. Choose OK. The dialog box disappears, and the Presentation Space font size changes to display your choice.

Note: To *cancel* your choice, choose Cancel. The dialog box disappears. To *reset* your choice after you choose OK, display the dialog box and choose Optimize. This changes the font size to 8x16 (for Model 2), 8x12 (for Model 3), 8x10 (for Model 4), and 6x14 (for Model 5). The dialog box disappears. To reset the font size to its original size you can use the Reset Config command (if you use this command, any other changes you made since the file was last saved will also be reset to their default values). The Reset Config command will not reset changes to the keyboard unless the Config Keyboard Map window is open at the time you choose the Reset Config command.

Saving a File

This procedure saves changes into a file, and allows you to rename it and relocate it into a different directory.

1. Choose the Save As command from the File menu in the Printer Session window, Session window, or Config Keyboard/Keypad Map window (**<Alt> <F> <A>**).
The Save As dialog box appears, displaying the current filename and location.
2. If you want to
 - ◆ Rename the file, enter the new filename in the text box.
 - ◆ Relocate the file, select the new drive letter in the list box (the new drive letter appears in the text box).
3. Specify the new directory path next to the drive letter in the text box.
4. Choose the Save button. The dialog box disappears.

Note: To *cancel* a save before choosing the Save button, choose Cancel. The dialog box disappears.

Sending a File to the Host

This procedure transfers a file from the workstation to the host.

1. Choose the Send command from the Transfer menu in the Session window. The Send Session window appears (**<Alt> <T> <S>**).

2. Specify the file to be sent and its current location as follows:

- a. Enter the destination host name in the Host text box.

For VM/CMS, this is *filename (fn) filetype (ft) filemode (fm)*. Separate with spaces (for example, TESTFILE TEST A1). Fn and ft are required, and may be up to 8 characters long. Fm is optional—if omitted, the default of A1 is assumed.

For TSO, this is the TSO data-set-name parameter. This parameter is required. Follow this by entering the *member-name* parameter that is required if the TSO data set is partitioned. The data-set-name (with member-name, if required) may be enclosed in single quotes to indicate that it is the complete name (that is, that it is not to be prefixed by TSO).

For CICS, this is the host filename (fn). This parameter is required, and must conform to the CICS filename/program name/transaction ID conventions (where the initial character is a letter and the remaining characters are letters or digits). Do not separate with a space (for example, TESTFILE.TEST(2)).

- b. Enter the filename in the Local text box or choose the name from the Filename list box. The filename displays in the Local text box.
- c. Specify the source drive letter in the Directory list box, and type the directory path in front of the filename in the Local text box (if the filename has not been obtained from the directory in the Filename box).

3. Choose the Options command from the Config menu in the Send Session window to specify file transfer options (**<Alt> <N> <O>**). The Send/Receive Options dialog box appears.

4. Specify CMS, TSO, or CICS options (referring to your CMS, TSO, or CICS documentation) as follows:

◆ *For a VM/CMS host:*

- a. Select the VM/CMS option button from the Host Type box. A black dot fills this button.
- b. Select the Append to Data Set, ASCII, and/or CRLF check box as needed. An X displays.
- c. Enter the required record length or leave the default in the Record Length text box.
- d. Enter the packet size in the Packet Size text box.
- e. Enter the timeout in the Timeout text box.
- f. The Host Program Name text box lists the name of the file transfer program installed on the host. The default name is IND\$FILE. If the name of your host program is different, enter the name of your host program in this box. (When the host program name is different, it is usually because the host language does not include the \$ character.)
- g. Choose the language in the Language list box.
- h. Enter the directory path of the language translation table (NVLXXLAT.IBM) in the Language Table Path text box if different than the default specified.
- i. Select the Fixed or Variable option button in the Record Format area. A black dot fills this button.

- j. Choose OK. The dialog box disappears, and the Send Session window reappears.
- ◆ For a *MVS/TSO* host, repeat the CMS steps except:
 - a. Select the MVS/TSO option button from the Host Type box. A black dot fills this button.
 - b. Specify the block size in the Block text box.
 - c. Select the Undefined button (if required) in the Record Format area.
 - d. Enter values in the Space, Increment, or Average Block text boxes in the TSO Options area.
 - e. Select the Tracks, Cylinders, or Blocks button from the Space Allocated In area of the TSO Options.
 - f. Choose OK. The dialog box disappears, and the Send Session window reappears.
 - g. Save the options you specified if needed for future transfers.
- ◆ For a *CICS/VS* host, repeat the CMS steps except:
 - a. Select the CICS/VS option button from the Host Type box. A black dot fills this button.
 - b. You do not specify record format in the Record Format area.
 - c. Enter the required CICS options in the Special CICS Options text box. If there are options, enter them within parentheses; then skip a space and enter comments if needed. If no options are needed but you need to enter comments, enter parentheses without anything in them, followed by a space and comments.
 - d. Choose OK. The dialog box disappears, and the Send Session window reappears.
 - e. Save the options you specified if needed for future transfers.
- 5. Choose the Send button to send the file. When transfer has completed:
 - ◆ The entire Percentage Complete box is shaded.
 - ◆ The File Size number appears.
 - ◆ The Bytes Sent number appears.
 - ◆ Timeout Retries increments if the host has not responded to the PC transmission within the timeout period set internally (about 30 seconds). If the host does not respond within the maximum timeout set by the user in the Send/Receive Session Options dialog box (a maximum of 300 seconds), then file transfer is cancelled and an error message appears.

Note: Choosing Cancel or Close before choosing the Send button exits file transfer and returns you to the host session. If you cancel after choosing the Send button and abort file transfer, you might need to press the **<Enter>** and/or **<PF2>** key to get the READY prompt from the host.

Connection Configuration Dialog Box

Allows you to choose the server name, service name, user ID, and LU category. The LU category specifies the LU group from which you want to obtain a session. You can choose one of these LU categories:

- ◆ Any Choose if the LU group (Public, Pooled, or Dedicated) can be any.
- ◆ Public Choose for an LU that is neither pooled nor dedicated.
- ◆ Pooled Choose for a group of LUs that have one or more characteristics in common (such as all users in this group will have a Model 2 session with Model 2 displays).
- ◆ Dedicated Choose for an LU that has a unique configuration (such as a reserved address for a specific user).

Related Topic

[Connection Command](#)

Connection Reminder Dialog Box

Reminds you of the server name, service name, user ID, and LU category for the current session.

Related Topic

[Connection Reminder Command](#)

Define Custom Color Dialog Box

Allows you to define custom colors for the 16 color squares in the 3270 Workstation Color Control dialog box. This box displays when you choose the Define button, which works only if your hardware driver supports 256 colors.

When you define a custom color as described in the Changing Colors Supported by the Hardware Driver procedure, note that any Session window color that was defined by the old color in the square will change to the new color you defined.

Note: Be careful when you redefine a custom color in a color square. For example, if you change blue to red, and the OIA colors were blue and red, the OIA area will all be red and you will not be able to see the OIA symbols. If this happens, you can use the Optimize button to reset the color, but the color will be reset to the hardware adapter's default for the old color and not the original color provided by Novell.

After you redefine the color square to a new color, you can use this square to redefine any color in the Session window to the new color by following the Changing Host-Assigned Colors procedure.
