GEnie

GEnie is the latest online service to offer Ambrosia a piece of virtual real estate. Ambrosia is pretty excited about this. The more places we can reach, the more support we can offer, the happier our users are. So now Ambrosia has forums on AOL, eWorld, ZiffNett & GEnie. Of course our stuff is available elsewhere, but these are your one stop shopping areas.

mbrosia's support area is in the Macintosh Product Support Round Table, located on page 606. To get there, while signed on and in terminal mode, type M606 at any GEnie prompt. Our message base can be found by choosing option 1 from the page 606 menu. This will take you to the message boards. The Ambrosia Section can be found by typing SET 4. Our software library can be found by choosing option 3 from the page 606 menu. This will take you to the software libraries. Then choose option 8 to set the software library to Ambrosia's library, which is library 14.

For questions or more specific information e-mail us at AmbrosiaSW.
