Welcome to Extensions Strip!

Extensions Strip hosts control strip modules in the most flexible environment out there.   Its theme is "extensions with a global interface" because of the extra power it gives to modules, especially the Extensions Strip savvy ones.

NOTE: It is recommended that you disable Control Strip before installing. To do this, open the Extensions Manager control panel and check the off box for "Control Strip" and (for System 8.5 and beyond) the "Control Strip Extension".

Included in the package are two useful modules, a few icon themes, and developer stuff.   Remember to look at the documentation for further info. Have fun, experiment, and keep in mind that Extensions Strip is shareware,
