A-Dock X 1.4.6
shareware
The tijej house, jeromefoucher@mac.com,
http://jerome.foucher.free.fr
Requirements: Mac OS 10.3 or later
A-Dock X uses Themes to customize its appearance. Do you want your icons to float into flames, grass, snow, flowers? A-Dock X features nine built-in Themes. Plus you can download more cool Themes from the Themes archive. You can also customize A-Dock's colors and transparency so your Dock just looks perfect.

DockFun 4.7 *shareware*
Donelleschi Software, info@donelleschi.com,
http://www.donelleschi.com
Requirements: Mac OS 10.2.7 or later
DockFun is a tool to run an infinite number of OS X's Dock configurations. For example, you'll be able to set up a Dock for Internet applications and a Dock for graphic purpose which you'll turn on, easily, with just a click. It also allows you to edit your Mac OS X dock preferences. It will not only increase your productivity on Mac OS X, but also make it easy to organize your applications and documents.

FileBrowse 1.0.2 *trial*
Robert van Uitert, rvu@rgreenblue.com, http://www.filebrowse.com
Requirements: Mac OS 10.4 or later
The standard file browser on the Mac is the Finder, which can show thumbnails of image files, but shows all other files and folders as standard icons. Because all items of a certain type have the same icon, it's hard to distinguish between the items. The icons don't give any clue about the specific contents of the files and folders. FileBrowse can show thumbnails for many file types, not only for images, and folder icons even show the items inside.

Mousepose 2.5.1 *demo*
Boinx, info@boinx.com, http://www.boinx.com
Requirements: Mac OS 10.3.9 or later
Boinx Mousepose is the essential tool for presenters and trainers, adding the final touch to the perfect demo. Now the audience can not only follow the mouse and its actions but also see the keys pressed during the presentation. This allows them to better understand what they see on stage.

sqreensavers 1.0 *freeware*
Plasq, http://www.plasq.com
Palsq's sqreensavers range from abstract vector colored shapes to panning pastoral scenes, and are based on the larger set of visualizers from plasq's Rax 2.0 application for professional musicians. They have been designed to use the graphics power in modern machines, resulting in attractive visuals at relatively small cost to the CPU.
