

# Welcome to Duality 4 GT!

Duality 4.0 GT is not compatible with Aqua backups generated by the following theme changers: Duality 4 Beta, Duality 3.1, Duality 3.0 and ThemeChanger. Please restore to Aqua using your theme changer before using Duality 4 GT. Duality 4 GT will not run if a Aqua backup from a previous version of Duality is present.

Duality 4.0 GT reads themes in the following formats: .tpkg, .dlta, .rsrc, .iconset, .theme and .xscheme. A Duality Pro registration is required to read .tpkg and .rsrc themes.

## Known Issues:

- Aqua backups from previous versions of Duality cannot be read.
- Icons may not appear for theme files in some cases.
- Load times may be slow on non-xscheme files. Convert theme files to xschemes to prevent this.

If you encounter any problems please contact [goMac@mac.com](mailto:goMac@mac.com).
