

# CopyWrite 2.2

CopyWrite is an organizational tool specifically designed for the process of creative writing for projects of all kinds. Word processors are for formatting. Desktop publishing applications are for layout. CopyWrite is for writing.

---

## Using CopyWrite

What is it and what does it do for you?

CopyWrite uses a **project-based approach** to keep your writing organized. Word processors and layout tools are great for making your finished manuscript pretty, but do little to help you stay organized during the process of writing. Treating your collection of chapters, sections, character sketches, random scenes, and notes as a project rather than just a vague jumble of loosely-related documents, CopyWrite helps you keep track of it all. CopyWrite's version control system makes it easy to explore all the alternatives without sacrificing neatness and organization.

CopyWrite turns folders full of loose documents into a well-organized project with a simple, all-in-one interface. Finding what you're looking for is quick and easy - use the **powerful project browser** to organize, search, and filter or use the **navigation bar** to jump easily from document to document. CopyWrite saves your work automatically as you make changes and even remembers where you were the last time you were working on any document.

Speaking of changes, CopyWrite's Global Replace lets you make changes across your entire project instantaneously. Whether you want to change a character's name or capitalize every occurrence of a word, CopyWrite makes change simple.

Of course change can be frightening, but with CopyWrite there is nothing to fear. Its built-in backup system is the perfect companion for CopyWrite's robustness. Whether you're a full-time writer or a part-time hack, CopyWrite treats your project like the investment it is, keeping it safe above all else. CopyWrite was designed with the process of writing (and the humans who do the writing) in mind.

---

## What's New In 2.2

What great new features are included in this version?

- Full screen editor - *Removes the distractions, leaving nothing but you and the page.*
  - Navigation bar - *Lets you navigate your project without the project browser.*
  - Selected text statistics - *Provides instant statistics for any selected text.*
  - Separate export and printing preferences - *Gives you even more control without the clutter.*
  - Numerous interface improvements - *Continuous refinement for a better user experience.*
  - Performance and stability enhancements - *Faster, snappier, more efficient.*

## About Bartas Technologies

Who created this software?

The philosophy behind Bartas Technologies revolves around a simple yet sometimes elusive concept: Should you kill a flea with a cannon ball just because you can?

Large software suites are meant to be a catch-all, a silver bullet for IT needs. What they typically

turn out to be is a confusing jungle of options you'll never use. Bartas Technologies strives to provide simple, realistic solutions to tough problems.

Most importantly, Bartas products are about personal creativity and the pursuit of self-expression.

**“Should you kill a flea with a cannon ball just because you can?”**
