Jon's Phone Tool
by Jonathan Nathan
Version 3.0.3 Released December 29, 2005

Introduction
Jon's Phone Tool (JPT) is a versatile phone dialer. JPT can dial your Bluetooth mobile phone or your regular land line through your Mac's modem or speakers. JPT can also make calls via Vonage, CallVantage, Skype, Ovolab Phlink, Parliant's PhoneValet, a Cisco IP Phone, an Asterisk PBX server, an IP-based telephony device, or various softphones from Xten Networks, for use with many VoIP services.

You can enter a phone number manually or you can use the integrated search tools to find numbers in your Address Book, Microsoft Entourage, Now Contact, or Palm Desktop databases. You can also search various websites and with the included contextual menu, you can even select a number just about anywhere and instantly dial it using JPT.

JPT also has extensive AppleScript support, a call log, a notepad, and call timers as well as a fun and unique interface.

For more information about this product, please go to the main JPT page: http://homepage.mac.com/jonn8/jpt/ <http://homepage.mac.com/jonn8/jpt/> .

Any feedback you may have is appreciated jonn8@mac.com <mailto:jonn8@mac.com?subject=Re:%20Jon's%20Phone%20Tool>.

Installation
To use this application, copy it to your Applications folder (or anywhere, really).

Requirements
Jon's Phone Tool requires Mac OS X 10.2 or later.

While JPT should work on all computers that meet the requirements, please test JPT to see if it is compatible with your system before you register. The beauty of shareware is that you can determine if a product will meet your needs before you buy it so please, please exercise this great feature!
