

SuperDuper-Header.gif "

Welcome!

Thank you for your interest in SuperDuper!

SuperDuper is designed to make it easy for you to isolate your computer from unwanted system changes.

While SuperDuper can be used as a flexible disk copying utility, it goes well beyond mere duplication. Its unique "Safety Clone" feature lets you install potentially risky drivers or system updates without fear of creating an unbootable or unworkable system - or losing access to your critical personal data.

SuperDuper's power is accessible to Macintosh users of any ability, thanks to its easily understood interface and complete documentation. Everything that will occur is presented in a clear summary section entitled "**What's going to happen?**", ensuring that even the least experienced is guided through the process step by step.

Installation

To get started, just drag SuperDuper! to your Applications folder. (If you encounter problems replacing the old version, simply drag the old version to the trash first)

You can access the documentation from SuperDuper's Help menu (Help | User's Guide).
