

POSITION.TXT

This file is provided for users of Microsoft® Visual Basic™ version 3.0 who want to access Word through OLE Automation.

Visual Basic version 3.0 does not support named arguments, which means that when a Visual Basic 3.0 application sends WordBasic commands through OLE Automation, it must specify named WordBasic arguments by position. WordBasic statements that correspond to Word dialog boxes take named arguments.

For most WordBasic statements that correspond to dialog boxes, the positioning of the arguments is documented in the WordBasic Help topics or printed reference entries for those statements. However, the WordBasic statements for some dialog box tabs include arguments that are irrelevant or that have no effect. These arguments are not documented in WordBasic Help or in the printed reference. For example, the InsertIndex statement corresponds to the Index tab in the Index and Tables dialog box. The InsertIndex statement takes a number of arguments that have to do with other tabs in the dialog box, such the Table of Contents tab. Since these arguments are irrelevant to inserting an index, they are ignored and therefore not documented in WordBasic Help or in the printed reference. However, the Visual Basic version 3.0 OLE Automation programmer needs to be aware of these arguments so that he or she can correctly specify arguments by position.
