Beta Tester Info File for The Fingerer/32 BETA v0.3

WIDE BETA RELEASE

PLEASE SEND BUG REPORTS / SPELLING ERRORS / GENERAL BONERS TO akist1+@pitt.edu. FOR BUG REPORTS *PLEASE* STATE EXACTLY WHAT WAS HAPPEINING WHEN ERROR OCCURRED.

!!! NOTE !!! : The Fingerer/32 has been built to take advantages of dynamic libraries. They are: MFC30.DLL, MSVCRT20.DLL WINSOCK.DLL, CTL3DV2.DLL. The Fingerer/32 won't work properly unless all are present on your system.

KNOWN BUGS (not to be reported):
<none>

KNOWN "CHARACTERISTICS"

1   Ping currently only returns ALIVE or NOT RESPONDING. (If you need more functionality use the ping.exe that comes with Windows 95 and NT)

2   Ph queries have server response numbers included (ie -200: Your search found...). This is being worked on.

3   "The Four ComboBoxes don't let me cut and paste." This is not true. Use CTRL-INS to Copy,

SHIFT-INS to Paste.

4   The Fingerer/32 may start acting very strange if it
     encounters a large server reply (ie 60K or so).
     This is a storage implementation problem and
     will be fixed in the next release.

THANK YOU.
