1.2 CheckItOut!: Copyright, License and Disclaimer

The CheckItOut! program and its documentation are (c) Copyright ←
1994,
1995 Bug Free Development All rights reserved.

A demonstration version of the CheckItOut! program is made available through the form of electronic distribution known as "Shareware". Shareware allows you to evaluate the demonstration version of this software prior to purchasing it.

A limited, 30 day license is granted to single users for the express purpose of evaluating the demonstration version of the CheckItOut! program. Registration is required for any use after the expiration of this limited license.

No warranties are implied or expressed with regard to the fitness or merchantability of the CheckItOut! program for any particular purpose. All risks and damages, incidental or otherwise, arising through the use or misuse of the CheckItOut! program are entirely at the responsibility of the user. In no event shall Bug Free Development or the author of the CheckItOut! program be liable for direct, indirect, special or consequential damages.

While considerable effort has been made to provide a reliable product, this software is not guaranteed to be 100% "bug-free". Nor does this disclaimer entitle the user to any future release. Any problems that do arise will be corrected when and if feasible at the author's discretion.

Distribution is limited to the original shareware distribution archive file only. None of the member files may be omitted or distributed separately. No profit or other material gain may be realized while distributing the demonstration version of the CheckItOut! program other than the cost for media and postage incurred while distributing this program.

The limited distribution right granted above is for the demonstration archive only! No distribution rights are granted for the registered versions of the CheckItOut! program. All rights to the CheckItOut! program software are retained by the author and only a license to use the software on a single computer are granted.

This software is protected by federal copyright law. Copying software for any reason other than to make a personal backup is a violation of law. Individuals who make unauthorized copies of software may be

subject to civil and criminal penalties. Registered copies of the CheckItOut! program are serialized and tracked to the original licensee who is liable for any infringements of copyright.

Registration

1.3 CheckItOut!: Features

The CheckItOut! program is extremely fast while supporting an extensive feature list:

- * Multiple account types: Checking, Savings, Credit Card, Cash, Asset, Liability.
- * Many accounts can be managed simultaneously.
- * Flexible categorization of spending and income, including multi-level categories.
- * Extremely fast data entry using SmartType.
- * Fast fund transfers from one account to another.
- * Very convenient account reconciliation with bank statements using intuitive windows.
- * Simple balance adjustment feature.
- * Numerous reports are available analyzing personal finances, including budget, net worth, transaction itemization by account, transaction breakdown by category and category summaries.
- * Sophisticated budget capabilities including monthly values for each category and reports comparing actual spending against budgeted amount.
- * Powerful search and search/replace functions.
- * On-Line HyperText Help with Context Sensitive Help
- * Imports/Exports transactions and categories in .qif format, a defacto industry standard compatible with Quicken and Microsoft Money programs.

1.4 CheckItOut!: Introduction

The CheckItOut! program monitors the state of your entire ↔
personal

finances. You can create accounts to track your real life accounts like checking, savings, and credit card. Fund transfers between accounts are very simple and can be handled with a few simple keys. You can also create extensive transaction categories to classify your spending and investing. Powerful reporting features allow you to closely monitor your finances.

The CheckItOut! program uses a number of different windows to allow you to manage your accounts:

- registers
- categories & transfers
- reconcile
- modify account information,
- modify categories
- transaction search/ query
- reports

CheckItOut! processes personal finance data formatted as transactions. Transactions are quickly entered into an account register using SmartType. The SmartType feature recognizes previous transactions and quickly fills in other transaction fields. The CheckItOut! program may be invoked from the WorkBench or by using the CLI by specifying a finance database file.

For example:

```
CheckItOut Finances.cio
```

would instruct the CheckItOut! program to open the Finances.cio database. See the section [Command Line Options](#) for a complete description of all the command line options.

1.5 CheckItOut!: Installation

To use the CheckItOut! program your system must have the following minimum system requirements:

an Amiga 500,600,1200,2000,2500,3000,4000 with a color display.

AmigaDos 2.0+

1024 Kilobytes Memory

1 Floppy Disk

Installation instructions:

Copy the program (CheckItOut!), the default category list (DefaultCategories.qif) and the optional sample database Finances.cio to the desired directory.

copy #?.guide#? help texts to a directory specified by the environmental variable AmigaGuide/Path.

1.6 CheckItOut!: Command Line Options

If the CheckItOut! program is executed from the CLI. The format for the command is:

```
CheckItOut! [options] [data file]
```

The data file name is optional, if no name is specified, the default of Finances.cio in the current working directory is opened/created.

The following values are supported:

Option	Description
-----	-----

There are no options in this release.

1.7 CheckItOut!: Menus

The CheckItOut! program sports a standard Amiga menu ↔ interface.

Holding the right mouse button while the pointer is in the CheckItOut! display window changes the title bar to a menu strip.

The following table describes the menu structure for the CheckItOut! program:

1.8 CheckItOut!: Menu/ Program/ About...

Selecting the About menu choice brings up a dialog box ←
containing the
version of the CheckItOut! program, a copyright notice and
registration information.

If you are using the evaluation version of the program, that fact is
stated in the dialog box along with the following gadgets: AGREE,
REGISTRATION, and CANCEL. If you don't agree to the

license and warranty
information outlined in this document, press
CANCEL and don't use the program. If you do agree with the license and
warranty press AGREE to continue.

If you have registered and need to enter the registration information,
select REGISTRATION. This will open another dialog box containing a
form to enter the registration information. Registration requires that
you agree to the license and warranty and that you pay a software
license fee. See the section on
Registration
for more information on
how to register.

If you are a registered user, the dialog box registration information
contains your name and serial number.

The keyboard shortcut key for About... is to press <Right-Amiga-A>.

1.9 CheckItOut!: Menu/ Program/ Close Window

Selecting the Close Window menu performs the same action as pressing the Close-Window-Gadget, that is it closes the currently active account or category list.

To exit the program, select
Quit
from the Program menu.

The keyboard shortcut key for Close Window is to press <Right-Amiga-C>.

1.10 CheckItOut!: Menu/ Program/ New Account...

This menu choice allows you to create a new account. When you select New Account, a fill-in form is displayed. Choose the appropriate account type:

- Bank -- Use this type for accounts that you get regular statements for. For example, a checking account or mutual fund account.
- Cash -- Use the cash type for passbook bank accounts and for other simple cash monitoring. This type is useful for a business petty cash account.
- Asset -- Use asset accounts to manage things of value such as property.
- Credit Card -- This type of account is for a charge card account like a MasterCard or Visa.
- Liability -- Use this account to monitor liabilities like a home mortgage or car loan.

After you have chosen the account type, enter a name for the account. Names can be up to 15 characters long. You may also enter an optional description for the account. Account descriptions can be 49 characters long. When the account information entry is complete, press <Enter> or select [Record] to actually create the account.

A number of
Shortcut Keys
can be used to modify the name and
description text fields in this form.

When you create an account, CheckItOut! automatically creates a transfer category using the account name surrounded by brackets (e.g. an account named Checking has a corresponding transfer category [Checking]). CheckItOut! also adds the account name to the

Open Account
menu list.

Note: The account list is ordered alphabetically and the first ten accounts are assigned shortcut keys. If you change the name of an account, it may change the assignment of the shortcut keys.

After the account is created, a new register window will open for the account with a pre-filled transaction waiting for you to enter an opening balance. Bank, cash and asset accounts default to an initial deposit. Credit card and liability accounts expect an initial debit to be entered. You can change this by <Tab> or <Shift-Tab> to the other field. You can also change any of the other fields in the transaction. When the opening balance entry is complete, press <Enter> or select [Record] to complete account creation. Below is an example of a opening balance transaction.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | '/' | BALANCE |
|-----+-----+
|      |         | CATEGORY    |         |         |     |         |
+-----+-----+
|12/01|         |Opening Balance|         |         |     |         |
|-----+-----+
|1994 |[Account Name] |         |         |         |     |         |
+-----+
    
```

1.11 CheckItOut!: Menu/ Program/ Open Account...

Once you have created some accounts, the Open Account menu contains a sub-menu item for each account. Choosing one of the account names in the sub-menu causes the register window for that account to be displayed. The first ten accounts also contain shortcut key selections. For example, you can quickly open first account by pressing <Right-Amiga-1> The tenth account can be opened by pressing <Right-Amiga-0>.

Program

```

+-----+
|About...      |
|Close Window  |
|-----+-----+
|New Account...|
|Open Account... +-----+
|Change Account...| Cash      A 1 |
|Delete Account  | Checking A 2 |
|-----+-----+| IRA      A 3 |
|New File...     | Property A 4 |
|Open File...    | Saving   A 5 |
|-----+-----+| Visa     A 6 |
|Import...      +-----+
|Export...      |
    
```

```

|Print...      |
|-----|
|Quit         |
+-----+

```

1.12 CheckItOut!: Menu/ Program/ Change Account...

This menu choice allows you to modify account information. ←

When you

select Change Account, a fill-in form is displayed. You can choose the account type from the following choices:

- Bank -- Use this type for accounts that you get regular statements for. For example, a checking account or mutual fund account.
- Cash -- Use the cash type for passbook bank accounts and for other simple cash monitoring. This type is useful for a business petty cash account.
- Asset -- Use asset accounts to manage things of value such as property.
- Credit Card -- This type of account is for a charge card account like a MasterCard or Visa.
- Liability -- Use this account to monitor liabilities like a home mortgage or car loan.

Account names can be up to 15 characters long. You may also change the optional description for the account. Account descriptions can be 49 characters long. When the account information modification is complete, press <Enter> or select [Record] to store the changes.

A number of

Shortcut Keys

can be used to modify the name and description text fields in this form.

If you change the account name, CheckItOut! automatically changes the transfer category for the account and all transfers to the account are updated to reflect the new category. The account name will also be changed in the

Open Account
menu list.

Note: The account list is ordered alphabetically and the first ten accounts are assigned shortcut keys. If you change the name of an account, it may change the assignment of the shortcut keys.

1.13 CheckItOut!: Menu/ Program/ Delete Account

Use this menu choice if you need to delete an entire account. This function is very destructive and can not be undone. You should only delete an account when you are confident you will not need the transaction history any more. The following Program Alert is displayed prior to the delete function to give you a last chance to cancel the operation.

Make SURE the account name displayed in the requester is the account you want to delete!

```
+-----+
|                                             |
|                                             |
|  Deleting an Account is Permanent         |
|           and Irreversible.              |
|                                             |
| All Transactions in Account [Name]       |
| Will be Deleted and any Transfers       |
| to the Account Will be Converted        |
| to No Category Transactions.            |
|                                             |
|                                             |
| [Ok]                                     | [Cancel] |
|                                             |
+-----+
```

1.14 CheckItOut!: Menu/ Program/ New File...

You can create a new set of accounts by selecting this menu item. A

file requester is displayed prompting you to enter a new name for your accounts database. The default file extensions for CheckItOut! database files are .cio. When a new database file is created, a set of default categories is created as well. CheckItOut! looks for the default category file named DefaultCategories.qif in the same directory as the program. After the new database is created, you can begin creating your accounts.

Normally, you don't need to create a new file, instead use the

New Account...

menu choice to add new accounts to an existing database. Instances where you may want to create separate database file include when you run a business that maintains separate account information or if you manage bank accounts for others (like your kids).

1.15 CheckItOut!: Menu/ Program/ Open File...

You can change to a different set of accounts by selecting this menu item. A file requester is displayed prompting you to choose a database file. The default file extension is .cio for CheckItOut! database files. Select the desired directory and database file name.

1.16 CheckItOut!: Menu/ Program/ Import...

By selecting this menu item, you can import account transactions or categories created by CheckItOut! or other personal finance programs like Quicken or Microsoft Money. You must first select the destination account using

Open Account

the Program menu. If you want to import categories, select

Categories & Transfers

from the View menu.

A file requester is displayed prompting you to choose the import file. The default file extension is .qif for CheckItOut! and Quicken import files. Select the desired directory and file name.

If you import transactions that include transfers to accounts that don't exist, the transfer category is changed from [Name] to *[Name]. By doing this, you can quickly recognize that an account needs to be created to receive these transfers. After you have created the account, you must go back and change the *[Name] to [Name] in the transfer transactions.

If you import transactions that duplicate an existing transaction in the account, a warning is displayed in the register information box and the transaction is ignored.

1.17 CheckItOut!: Menu/ Program/ Export...

By selecting this menu item, you can export account transactions or categories created by CheckItOut! in a format that is compatible with other personal finance programs like Quicken or Microsoft Money. You must first select the source account using

Open Account

from the

Program menu. If you want to export categories, select

Categories & Transfers

from the View menu.

A file requester is displayed prompting you to enter an export file name. The default file extension is .qif for CheckItOut! and Quicken import files. Select the desired directory and file name. press

<Enter> or select [Ok] create the export file.

Make sure you do not use the same file name as your database file. If you do, you will corrupt your transaction database!

1.18 CheckItOut!: Menu/ Program/ Print

The action performed by selecting this item depends on the current activity. If you are displaying one of the reports generated by CheckItOut!, that report will be printed. When you select Print, the following form containing the page size and the destination for the report is displayed:

```
+-----+
|               +-----+ |
| [o] Device |@|      PRT:      | |
|               +-----+ |
|               |               |
|               +---+ +-----+ |
| [ _ ] File  |fr| |PRT:      | |
|               +---+ +-----+ |
|               |               |
|               --- Page ---   |
|               |               |
|               +-----+   +-----+ |
|   Width |   |   Length |   | |
|               +-----+   +-----+ |
|               |               |
| [ Ok ]           [ Cancel ] |
+-----+
```

Choices for the device are:

```
+-----+
|@|      SER:      | -- The serial device.
+-----+

+-----+
|@|      PAR:      | -- The parallel device.
+-----+

+-----+
|@|      PRT:      | -- The printer device (Recommended).
+-----+

+-----+
|@|T:CheckItOut.txt| -- A disk file named 'T:CheckItOut.txt'
+-----+
```

If you choose File, the [fr] button brings up the standard file requester. From the requester you can choose the destination text file for the report. Make sure you do not use the same file name as your database file. If you do, you will DESTROY your transaction database!

Below the device choice is the page size information. CheckItOut fills in a default page width based on the report being displayed. You can customize the size of the page by entering a new page width and page length.

The keyboard shortcut key for Print is to press <Right-Amiga-P>.

Note: The following print activities are NOT supported at this time.

If the active window is an account register, the contents of the account register will be printed. If the active window is the category & transfer list, the list will be printed.

1.19 CheckItOut!: Menu/ Program/ Quit

Selecting the Quit menu choice causes the CheckItOut! program to exit.

The keyboard shortcut key for Quit is to press <Right-Amiga-Q>.

1.20 CheckItOut!: Menu/ Edit/ New Entry

CheckItOut! always provides a blank transaction at the end ↔ of the register display. This register entry is used to add new transaction entries to the account. When you fill in a blank transaction and select [Record], the transaction is added to the account database and a new blank entry is created to allow you to add additional entries.

This menu selection allows you to quickly get to the blank register entry to add new transactions. More information is available on

Data Entry

.

The keyboard shortcut key for New Entry is to press <Right-Amiga-E>.

1.21 CheckItOut!: Menu/ Edit/ Delete Entry

This menu selection causes the currently selected transaction ↔ in the active account to be deleted. If the current transaction is a transfer, both the current transaction and the parallel entry in the other account are deleted. More information is available on

Fund Transfers Between Accounts
. Deleted transactions can not be restored so use caution when you select this action.

The keyboard shortcut key for Delete Entry is to press <Right-Amiga-D>.

1.22 CheckItOut!: Menu/ Edit/ Void Entry

Voiding a transaction is very easy with CheckItOut!. You simply select this menu choice and the transaction will be voided. Voided transactions can be recognized because CheckItOut! inserts the text Void -- at the beginning of the transaction. Other modifications made to voided transactions are that the transaction amount is moved to the end of the memo field and surrounded by []. Also, the transaction is marked as cleared.

1.23 CheckItOut!: Menu/ Edit/ Find Entry

This menu option allows you to search the current ←
account for
transactions that match particular values. You can choose the search criteria based on any of the transaction fields using the

Find Transaction
form. Filling in fields in the displayed query form will define the search criteria. The search is conducted from the currently selected transaction. When the last transaction of the account is reached, an alert is displayed asking you if you want continue the search from the first transaction.

You can use the keyboard shortcut
<Right-Amiga-N>
to continue searching.

Note: The account choice is predefined to the active account in the query form. Changing the account list is disabled.

The keyboard shortcut key for Find Entry is to press <Right-Amiga-F>.

1.24 CheckItOut!: Menu/ Edit/ Find Next

This menu option allows you to continue a search for ←
transactions that
match the active query form. The search is conducted from the currently selected transaction to the last transaction. When the last transaction of the account is reached, an alert is displayed asking you if you want continue the search from the first transaction.

If you have not entered any search criteria, an alert is displayed. You should use the Find Entry to enter the search criteria and begin a search.

The keyboard shortcut key for Find Next is to press <Right-Amiga-N>.

1.25 CheckItOut!: Menu/ Edit/ Replace Entry

This menu option allows you to search accounts for transactions that match particular fields. You can choose to search for any of the transaction fields. The matching transactions are displayed in the following window:

```

+-----+

| [Clear All] [Set All] [Replace ...] |
|-----+
+-----+

```

You must select the transactions that you want to perform the global replace on. To select these transactions, press the <Left-Mouse> button with the pointer over the desired transactions. Selected transactions are marked with an 'x' on the left side of the window. There are shortcut buttons to [Clear All] and [Set All] transactions.

You can change the field being replaced by pressing the <Left-Mouse>

button on the column heading of the field you want to replace. Doing so will change the [Replace ...] button to indicate the selected replacement field. Next to the [Replace ...] button is a fill-in field that contains the new value. The regular SmartType

shortcuts
are
available (including the special
date
and
category
shortcuts when

those fields are the chosen replacement fields). Valid values for the 'C'leared field are 'x', '*' and ' '. These represent Reconciled, Cleared, and not cleared respectively.

When you press [Replace ...] the changes are made to the selected transactions. The selection 'x' is removed from all transactions that have been successfully updated. If errors occur during a replace, the transactions that had errors are still selected with the 'x'. This allows you to correct problems and continue the replace.

You can also double click on a transaction to activate that account register and select the transaction.

1.26 CheckItOut!: Menu/ View/ Register

Choosing this menu selection is a shortcut to open the active account register window.

The keyboard shortcut key for Register is to press <Right-Amiga-R>.

1.27 CheckItOut!: Menu/ View/ Categories & Transfers

CheckItOut! provides a powerful set of category functions that allow you to classify your income and expenses. This menu choice opens the category/ transfer window. Using the functions provided by this window, you can create, modify, or delete categories and subcategories.

The following is an example of the category window:

```
+-----+
|CATEGORY/TRANSFER    TYPE        TAX |
|=====|
|
| Auto                Expense      T  |
|   Gas
|   Insurance
|   Miscellaneous
|   Repairs           |
```

```

|      Ford          |
|      Mazda        |
| Bank Charges      Expense |
| Bonus              Income  T |
| Business          T      |
| Advertising       |
|                   |
| [Use]   [New]   [Edit]   [Delete] |
| [       New Subcategory       ] |
|                               |
+-----+

```

The three columns in the window contain the category description, the type (Expense, Income, Transfer, Unspecified), and the tax related flag. Near the bottom of the window are some select buttons. The following table presents the buttons in the window and their functions:

[Use] ----- Copy the category to the selected transaction in the active account.

[New] ----- Create a new category. This button opens the category modification form.

[Edit] ----- Modify an existing category. This button opens the category modification form.

[Delete] ----- Delete the currently selected category.

[New Subcategory] -- Create a new subcategory. This button opens the category modification form.

The currently selected category is displayed in a raised bevel box. You can move the selection box up and down by pressing the <Up-Arrow> and <Down-Arrow> keys. Pressing <Enter> is the same as selecting the [Use] button. Double clicking on an entry is another shortcut for the [Use] button.

You can make categories into subcategories quickly by selecting the category you want to make a subcategory. Release then press and hold the <Left-Mouse> button down while you move the mouse up or down, the pointer will change to an up/down arrow and a transparent horizontal line will appear. Drag the mouse to the category you want to be a parent category and release the <Left-Mouse> button. For example, select Bank Charges, then hold the <Left-Mouse> button down while you drag the mouse up to the Auto category. When you release the mouse, Bank Charges will be a subcategory of Auto.

You can also move a subcategory from one parent category to another. Suppose you made the change in the above example then decided that you wanted Bank Charges to be a subcategory of the Business category. You would select Bank Charges, release then press the <Left-Mouse> button again this time dragging the mouse (and horizontal line) to Business.

You are not limited to nesting only two levels deep. You can actually create an unlimited nesting of subcategories. For example, under Auto:Repairs you could create a third level of subcategories for Mazda and Ford

When you enter category information in a transaction, separate the category and subcategory using : as a delimiter. For example if you were categorizing a check to the auto repair man who worked on your Mazda, you would enter the category information as Auto:Repairs:Mazda.

More information is available about
Data Entry -- Category

You can also promote a subcategory to a parent category or make a more nested subcategory less nested. To do this, select the subcategory you want to make a category. Release then press and hold the <Left-Mouse> button down while dragging the mouse to the left, the pointer will change to an left arrow and a transparent vertical line will appear. Drag the mouse to the left the number of levels you wish to promote the subcategory. The vertical line will show you what level you would get if you release the <Left-Mouse> button. For example, if Bank Charges were nested under Auto and you wanted to make it a category of its own, select the Bank Charges subcategory, release then hold the <Left-Mouse> button down while you drag the mouse to the left. The vertical line will move to somewhere in the Auto of the Auto category. When you release the mouse, Bank Charges will be at the same category level as Auto.

If you modify a category, all the transactions in all the accounts that contain that category are immediately changed. If you delete a category, any transactions that contain that category will be edited such that the category field is removed from the transaction. This is a significant loss of information about your finances and you should use caution when deleting categories!

Transfer categories are rendered as [Account Name]. You can not modify or delete a transfer category or create subcategories below a transfer category. To change a transfer category, you must use the

Change Account...
selection from the Program menu to change a transfer category.

The keyboard shortcut key for Categories & Transfers is to press <Right-Amiga-L>.

1.28 CheckItOut!: Menu/ Activities/ Go To Transfer

This menu choice allows you to quickly get to the parallel ↔ transaction created by a fund transfer. If the currently selected transaction is a

transfer, the destination account's register window is opened and the parallel transaction is selected. If the currently selected transaction is not a transfer, an error message is displayed in the information box at the bottom of the register window. More information is available about

Fund Transfers

.

The keyboard shortcut key for Go To Transfer is to press <Right-Amiga-G>.

1.29 CheckItOut!: Menu/ Activities/ Reconcile...

CheckItOut! provides a simple to use yet powerful account balancing feature. When you choose the Reconcile... menu option, a window is opened containing the following account statement form:

```

+-----+
|
|           Enter Information from Your Bank Statement
|
|           Date                Balance
|
| Previous  MM/DD/YYYY          0.00
|
|           +-----+-----+
| Current  | MM/DD/YYYY |          |
|           +-----+-----+
|
| Charges or Interest Will be Added to Your Account
|
|           Date                Amount          Category
|           +-----+-----+-----+
| Interest | MM/DD/YYYY |          | Interest Income |
|           +-----+-----+-----+
| Service Charge | MM/DD/YYYY |          | Service Charge |
|           +-----+-----+-----+
|
|           [Ok]          [Cancel]
|
+-----+
    
```

You enter information from your bank statement to begin the reconciliation process. Fill in the statement date and the ending balance on the statement.

```

|           +-----+-----+
| Current  | MM/DD/YYYY |          |
|           +-----+-----+
|
    
```

If you earned interest during the statement period, enter the interest

paid date, the interest amount and a category in the appropriate fields.

	Date	Amount	Category
Interest	MM/DD/YYYY		Interest Income

If you had to pay charges (including interest paid on a credit card account) during the statement period, enter the charge information in those fields.

Service Charge	MM/DD/YYYY		Service Charge
----------------	------------	--	----------------

You can use the same SmartType shortcut keys for modifying the Date and Category fields. You must enter a valid date, if you don't, an alert is displayed and you must correct the field. If you enter a nonexistent category, you are prompted to Set Up a new category, Select from the category list, or Cancel and return to editing the field.

When you have completed entering the statement information, press <Enter> or select [Ok]. If you change your mind, you can cancel the reconcile operation by pressing <Esc> or [Cancel].

Assuming you are continuing, another window will open showing the uncleared checks. More information is available on

Continuing Reconciliation

.

1.30 CheckItOut!: Reconciling an Account

Before getting to this step, you have entered account information in a

Statement Information

window. Now you are ready to complete the reconciliation. Displayed in the reconciliation window are all the transactions that have not been cleared. The information listed includes cleared status (a checkmark), the transaction reference number, date, description, and amount. All the debits (checks, charges, etc.) are listed first, then credits (deposits, payments, etc.). Within the debit/credit ordering, transactions are ordered by reference number and date. Also displayed in the window are some The following is a sample of the reconciliation window.

--	--	--	--

	Debit	Credit
Total Cleared	0.00	0.00
Total Not Cleared	0.00	0.00
Difference	0.00	

Num Date	Description	Amount
100 MM/DD/YY	xxxxxxxxxxxxxxxx	##.##
101 MM/DD/YY	xxxxxxxxxxxxxxxx	##.##
✓ MM/DD/YY	Interest Income	##.##
✓ MM/DD/YY	Service Charge	##.##

[Ok] [Cancel]

Interest income, service charges, and transactions that you cleared manually in the account register are displayed with a bold checkmark. The bold checkmark indicates that these transactions are not included in the totals at the top of the window.

To continue with the reconcile process, move the cursor above each transaction that appears as cleared on your statement. The cursor changes to a checkmark. When you press the <Left-Mouse> button the transaction below the cursor will be marked with a light checkmark. Repeat this procedure for all the cleared transactions on the statement. If you make a mistake, you can click on the transaction again to clear the checkmark. Use the scroll bar to move the transaction list up or down. If you need to correct a transaction, you can double click on it activate the register window and select the transaction.

As a convenience, you can press and hold the <Left-Mouse> button while you drag the mouse up or down. All the transactions will toggle as the mouse passes over them. If you continue to press the mouse button with the cursor below the last transaction displayed, the list will automatically scroll up, toggling the checkmarks as it scrolls. The same is true if you move the mouse above the top transaction except that the list scrolls down.

As you are checking or clearing the checkmark of the displayed transactions, the totals at the top of the window will update. When you have checked all the transactions on the statement, the difference field should be zero.

Difference	0.00	
------------	------	--

If it is not, there is something wrong with your account register or

bank statement. Usually some transactions weren't entered. You can select the account register window and add transactions during the reconcile process. The new transactions are added to the reconcile window when you press [Record] in the register window. You can also modify transactions in the register if there is a discrepancy with the transaction. Select the transaction in the register window, make your changes and press <Enter> or [Record]. The changes will be reflected in the reconcile window.

When you are done balancing the account, press <Enter> or select [Ok]. If the difference is zero, great you are done. The Debit and Credit Total Cleared values at the top of the window should equal the debit and credit totals on your statement.

If the difference field in the totals section is not zero, there is a discrepancy between your register and the statement. You are asked if you want CheckItOut! to add an adjustment transaction to the account. If you don't say [Ok], you must go back and fix the account yourself.

CheckItOut! will not let you exit the reconcile process with a balance difference from your statement. You can abort the reconcile by pressing <Esc> or selecting [Cancel]. If you do cancel, the account will be returned to its original state before the reconciliation began. Interest and service charges will be deleted from the account.

1.31 CheckItOut!: Menu/ Activities/ Adjust Balance...

CheckItOut! provides a quick mechanism for adjusting an account balance. If you select the Adjust Balance... menu selection, the following window appears.

```

+-----+
|
|      Date
| +-----+ Mark All Previous
| | mm/dd/yyyy | Transactions as
| +-----+      Cleared
|
|      New Balance      +---+
| +-----+            |\'/|
| |                |      +---+
| +-----+
|
|              Category
| +-----+
| |[AccountName] |
| +-----+
|
|
|      [Ok]          [Cancel]
|
+-----+

```

Enter the date that you want the balance set to the new balance value, the value itself, and a category where the funds should come from. If you leave the default category of [AccountName] CheckItOut! assumes the funds came from an account not managed by the program.

Since you are telling CheckItOut! exactly what the balance is in the account on a particular day, you can have all prior transactions marked as cleared. If you don't want the transactions cleared, remove the checkmark from the box.

You can use the same SmartType shortcut keys for modifying the Date and Category fields. You must enter a valid date, if you don't, an alert is displayed and you must correct the field. If you enter a nonexistent category, you are prompted to Set Up a new category, Select from the category list, or Cancel and return to editing the field.

When you have completed entering the balance adjustment information, press <Enter> or select [Ok]. If you change your mind, you can cancel the balance adjustment operation by pressing <Esc> or selecting [Cancel]. If you specified [Ok], a transaction is added to the account with the appropriate amount to make the balance after the adjustment the value you specified.

1.32 CheckItOut!: Menu/ Reports/ Budget

When you select the Budget report, the Find Transaction form is displayed. Filling in fields in the displayed query form will limit which transactions are included in the budget report.

CheckItOut! provides the capability to compare your budgeted spending against actual spending. Use the Budget report to view this comparison. The information contained are rows for each category you have set up and columns containing values. Each month uses three columns to display the data:

- o Monthly total of actual income/ spending
- o Budgeted values
- o The difference between the actual and budgeted amounts

The first column labeled with the name of the month (January, February, etc.) is the total actual income/ spending for the month. Next to the month is a column labeled Budget, this column represents what you entered in the budget for that month. The final column contains the Difference between actual and budgeted amounts.

Use the arrow keys or scroll bars to move around in the report display. You can use

<Right-Amiga-P>
 to output the report to the
 printer or a file. Resizing the window will cause more columns to be
 displayed. There is more information about
 Setting Up Budgets
 .

1.33 CheckItOut!: Menu/ Reports/ Net Worth

When you select the Net Worth report, the Find Transaction form is

displayed. Filling in fields in the displayed query form will limit which transactions are included in the report. For the Net Worth report, only the first date, account, and category fields are enabled. The number, description, amount, memo and second date filters are disabled.

After completing the query, the Net Worth report window shows you a summary of all your assets and liabilities on a particular date. Listed are all your asset accounts including subtotals for each type (bank accounts, cash accounts and other assets). After your asset accounts appear liability accounts with subtotals for credit cards and other liabilities. At the bottom of the report is your net worth, a total of assets minus liabilities.

Use the arrow keys or scroll bars to move around in the report window. You can use

<Right-Amiga-P>
to output the report to the printer or a

file.

1.34 CheckItOut!: Menu/ Reports/ Itemize Transactions

When you select the Itemize Transaction report, the Find Transaction form is displayed. Filling in fields in the displayed query form will limit which transactions are included in the report.

Included in the Itemized Transaction report is a combined opening balance for the selected accounts, followed by a detailed list of all the transactions that met the search criteria you entered in the find transaction query form. There are subtotals for each account, for all accounts in the query period, and a total ending balance that combines the opening balance and all the transactions.

Also included at the end of the report is a net result that shows the amounts of all debits (Outflows) and credits (Inflows).

You can double click on a transaction to activate that account register and select the transaction.

Use the arrow keys or scroll bars to move around in the report window. You can use

<Right-Amiga-P>

to output the report to the printer or a file. Resizing the window will cause more information to be displayed in the description, memo, and category fields.

1.35 CheckItOut!: Menu/ Reports/ Itemize By Category

When you select the Itemize by Category report, the Find Transaction form is displayed. Filling in fields in the displayed query form will

limit which transactions are included in the report.

The Itemize by Category report shows a detailed list of all the transactions that met the search criteria you entered in the find transaction query form. There are subtotals for each category. There are totals for income, expenses, transfers, and categories that have no type specified. There is a grand total at the end of the report.

You can double click on a transaction to activate that account register and select the transaction.

Use the arrow keys or scroll bars to move around in the report window. You can use

<Right-Amiga-P>

to output the report to the printer or a file. Resizing the window will cause more information to be displayed in the account, description, and memo fields.

1.36 CheckItOut!: Menu/ Reports/ Summary By Category

When you select the Summary by Category report, the Find Transaction form is displayed. Filling in fields in the displayed query form will limit which transactions are included in the report. ←

The Summary by Category report is similar to the Itemize by Category report except that the detailed list of all the transactions are not included. Only the category totals for the transactions that met the search criteria you entered in the find transaction query form are displayed. There are totals for each category that contains subcategories and totals for income, expenses, transfers, and categories that have no type specified. There is a grand total at the end of the report.

Use the arrow keys or scroll bars to move around in the report window.
You can use

<Right-Amiga-P>
to output the report to the printer or a
file.

1.37 CheckItOut!: Menu/ Set Up/ Budget

CheckItOut! provides powerful budget capabilities. ←

You can categorically specify the total amount you expect to spend each month. At any point you can compare your planned spending to the actual values using the

Budget Report
menu choice.

There are shortcut keys for zeroing an entire category row and copying a value to all later months in the year.

Use <Up-Arrow>, <Down-Arrow>, <Tab>, and <Shift-Tab> to move the entry box around in the display. You can also use scroll bars to move around in the window. When you are done select [Save] to record all the budget values. If you change your mind you can discard your changes by selecting [Restore].

You can use

<Right-Amiga-P>
to output the budget to the printer or a

file. Resizing the window will cause more columns to be displayed.

1.38 CheckItOut!: Menu/ Set Up/ Preferences...

Note: This feature is not available in this version of the program.

1.39 CheckItOut!: Menu/ Set Up/ Printer...

Note: This feature is not available in this version of the program.

1.40 CheckItOut!: Reports

CheckItOut! provides a number of query/ reports. These reports allow you to analyze your personal finances against your budget, your total net worth, and income/ spending categorically. The following reports are supported:

- Budget
- Net Worth
- Itemize Transactions
- Itemize By Category
- Summary By Category

1.41 CheckItOut!: Transaction Queries

CheckItOut! provides an extremely powerful query/ search capability. You can define a number of search criteria that are applied to the transactions used to build reports, find entries, and global replace functions. The following form is displayed allowing you to enter the filter criteria used when selecting transactions:

```

+-----+
|          +-----+          +-----+          |
| Date    |@| >= | and      |@| <= |      Select Accounts |
    
```

```

+-----+
|@| [.] | -- Allow entries containing this data (e.g. 'Brown Bank'
+-----+   contains 'Bank')

+-----+
|@| .[] | -- Allow entries that don't contain this data
+-----+

+-----+
|@| < | -- Allow entries that are less than this value
+-----+

+-----+
|@| <= | -- Allow entries that are less than or equal to this value
+-----+

+-----+
|@| = | -- Allow entries that are equal this value
+-----+

+-----+
|@| >= | -- Allow entries that are greater than or equal to this value
+-----+

+-----+
|@| > | -- Allow entries that are greater than this value
+-----+

+-----+
|@| <> | -- Allow entries that are not equal to this value
+-----+

```

Next to the selection box are the word `and` and another selection box. This second entry allows you to combine two conditions for each field.

```

and      +-----+
         |@| N/A|
         +-----+

```

This is very useful for entering ranges. For example you can include all transactions between to dates, check numbers, or amounts by specifying `>=` for the first date test and `<=` for the second test.

Another example is if you wanted to view the checks you wrote to all your banks except the Brown Bank, you could specify in the first description range `Bank` with the test `[.]` (contains) and in the second range `Brown Bank` and a test `.[]` (doesn't contain).

You can also control the inclusion or exclusion accounts or categories in your search by clicking the mouse in those windows to toggle the selection 'x'. There are shortcut buttons to `[Clear All]` or `[Set All]` the choices in the account and category windows.

You can combine many rules for the search. For example you could specify all the transactions within a certain date range that are above a certain value that also contain the word 'Christmas' in the

memo field.

Note: You can only have one Find Transaction window open at a time.

1.42 CheckItOut!: Fund Transfers Between Accounts

CheckItOut! provides an easy way to transfer funds from one account to another. Simply go to the source account you want to transfer money from and create a

New Transaction

. In the

Category

field of the new

transaction, select the destination account for the transfer. This is done by entering [Account Name] in the category field. The transfer transaction must contain a date and amount. It may also include a reference number, description, and memo just like regular payment and deposits. CheckItOut! automatically creates a parallel but opposite transaction in the other account. The program also includes a shortcut

Go To

method of getting from the source account to the destination and visa-versa.

For example, if in the account Saving you enter the following transaction:

DATE	NUMBER	DESCRIPTION	PAYMENT	DEPOSIT	'/	BALANCE
		CATEGORY		MEMO		
12/25	1023	Transfer	500.00			1720.00
1994	[Checking]			Pay for gifts		

The following parallel transaction would be added to the Checking account.

DATE	NUMBER	DESCRIPTION	PAYMENT	DEPOSIT	'/	BALANCE
		CATEGORY		MEMO		
12/25	1023	Transfer		500.00		1207.00
1994	[Saving]			Pay for gifts		

If you modify date or amount in either the original or the parallel

transaction the other transaction will be changed as well. Changing the other fields in either transaction does not effect the other.

If you set the category field of the original transaction to another account, the parallel transaction will be deleted from the destination account and a parallel transaction will added to the new account. Using the above example, if you decided to transfer the money from your Savings account to your Visa account, the transaction in Checking would be removed and a new entry in Visa would be added.

If you set the category field of the original transaction to a non-transfer category, the parallel transaction will be deleted from the destination account.

Attempts to change the category in the parallel transaction entered in the destination account will result in an error message. The error is displayed in the register information box at the bottom of the window. Using the original example, if you tried to change the category field for the transfer transaction in the Checking account, an error would be generated.

If you delete an entire account, any transfer transactions will be converted to simple transactions. The transfer category will be blanked.

1.43 CheckItOut!: Data Entry

Transaction data is entered in an account window. The account window is broken into a number of sections. At the top is a descriptive transaction that contains the field headings for a transaction. Below the description are the actual transactions. The arrow keys and scroll bar allow you to move around among the account transactions.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | ` / | BALANCE |
|-----+-----+
|      |         | CATEGORY   |         | MEMO    |     |
+-----+-----+
|12/09|         |             |         |         |     | 0.00 |
|-----+-----+
|1994 |         |             |         |         |     |     |
+-----+
    
```

One transaction per account can be selected for modification at a time. To distinguish the selected transaction from others, the modifiable one is rendered in a raised box. To change the transaction simply type in the fields. You can use <Tab> and <Shift-Tab> to move from one field to another.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | ` / | BALANCE |
|-----+-----+
    
```

	CATEGORY	MEMO	
12/09			0.00
1994			

Each transaction contains a number of fields. Many of these fields contain SmartType special key sequence. The following is a list of the transaction fields:

Date

Number

Description

Payment

Deposit

\/

Balance

Category

Memo

After you enter or modify transaction data, you must press < ←
Return> or

<Enter> on the keyboard or select [Record] with the <Left-Mouse> button when you are done. If you do not, the data you entered will not be stored! If you select another transaction either directly with the mouse or indirectly by scrolling the currently selected transaction off the window, any modifications will be lost.

You can use <Esc> or [Restore] to cancel the data entry and return the original data to a transaction.

When you create or modify a transaction, it is placed in the account register according to a defined sort order. The order is ascending dates. If the dates are the same, ascending reference numbers are used. If these are the same, the order is the oldest transaction is at the top and the newest is at the bottom of the order.

You can not record a transaction that contains an invalid date. If you try, a warning is displayed in the register information box and you must correct the date.

Additionally, if you enter a numeric value in the NUMBER field, CheckItOut! scans the transaction list for previous transactions that contain a duplicate check/reference number. If one is found, you are presented with an alert that shows you the date and description of original. You must then choose an action to the duplicate number. Actions that can be taken on a duplicate are:

[Save] -- Ignore the fact that a duplicate exists and record the transaction anyway.

[Discard] -- Restore the transaction to its original state prior to any modifications.

[Cancel] -- Cancel the record operation and continue editing the transaction

1.44 CheckItOut!: Data Entry -- Date

The date field contains a date formatted in two rows. In the first row, MM/DD contains the month (MM) [01,02,...,12] and the day (DD) [01,02,...,31]. The second row contains the year. The </> key performs a special function. If there is no '/' in the MM/DD field, the first '/' will be entered as a separator. If one already has been entered, the </> key will tab data entry between the month/day and year fields.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | '/' | BALANCE |
|-----+-----+-----+-----+-----+
|      |         | CATEGORY    |         |         |     |         |
+-----+-----+-----+-----+-----+
|MM/DD|         |             |         |         |     | 0.00 |
|-----+-----+-----+-----+-----+
|YEAR |         |             |         |         |     |         |
+-----+-----+-----+-----+-----+

```

When entering dates with CheckItOut!, a number of SmartType shortcut keys are available. These keys allow you to quickly modify the date field. The following is a table of these special date keys and functions:

 and -- Sets the date to the beginning of the year (01/01).
 <E> and <e> -- Sets the date to the end of the year (12/31).

<F> and <f> -- Sets the date to the first of the month.
 <M> and <m> -- Sets the date to the middle of the month.
 <L> and <l> -- Sets the date to the llast of the month.

<T> and <t> -- Sets the date to today.
 <+> and <=> -- Increases the date by one day.
 <-> and <_> -- Decreases the date by one day.

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

1.45 CheckItOut!: Data Entry -- Number

The number field contains a transaction reference number. ↔

You can

enter any data you like in this field. Typically, you might enter the check number if this is a checking account or other reference information like ATM or CASH. The maximum number of characters you can enter in this field is 5.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | \ / | BALANCE |
|-----+
|      |         | CATEGORY   |         |         |    |         |
+-----+
|      |         |            |         |         |    |         |
|-----+
|      |         |            |         |         |    |         |
+-----+

```

When entering check numbers in CheckItOut! a couple of SmartType shortcut keys are available. These keys allow you to quickly modify the number field. The following is a table of these special keys and functions:

- <+> and <=> -- Increases the last check number you entered by one.
- <-> and <_> -- Decreases the last check number you entered by one.

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

1.46 CheckItOut!: Data Entry -- Description

This field contains a description for the transaction. You can ↔ enter

any data you like in this field. Typically, you might enter a deposit or payee description. The maximum number of characters you can enter in this field is 49.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | \ / | BALANCE |
|-----+
|      |         | CATEGORY   |         |         |    |         |
+-----+
|      |         |            |         |         |    |         |
|-----+
|      |         |            |         |         |    |         |
+-----+

```

When entering descriptions in CheckItOut! SmartType really makes things go fast. SmartType remembers the transactions you have already

entered for this account and as you type, it automatically fills in the rest of the description with the last transaction that matches what you have entered. As soon as you are satisfied with the description, you can press <Tab>, SmartType automatically copies the amount, category, and memo fields from the previously entered transaction. If the transaction is new and therefore not in the transaction list, SmartType immediately recognizes this and allows you to enter a new description, amount, category, and memo.

You can also use some other SmartType shortcut keys. These keys allow you to quickly search the SmartType transaction list for the one you want. The following is a table of these special keys and functions:

- <+> and <=> -- Selects the next transaction in the SmartType list.
- <-> and <_> -- Selects the previous transaction in the SmartType list.

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

If you need to enter <+>, <=>, <->, or <_> simply hold the <Ctrl> key down and press the desired key.

1.47 CheckItOut!: Data Entry -- Amount

The payment and deposit fields contain the transaction amount. You may enter a value in this field or leave it blank. When a value is entered in the payment field, this amount is deducted from the account balance. Values in the deposit field increase the account balance. The maximum number of characters you can enter in this field is 10.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | \'/ | BALANCE |
|-----+-----+-----+-----+-----+
|      |         | CATEGORY    |         |         |     |         |
+-----+-----+-----+-----+-----+
|      |         |             |         |         |     | 0.00 |
|-----+-----+-----+-----+-----+
|      |         |             |         |         |     |         |
+-----+
    
```

Different account types use different descriptions for the payment and deposit fields. The following table describes these fields:

- Bank -- PAYMENT and DEPOSIT
- Cash -- SPEND and RECEIVE
- Asset -- DECREMENT and INCREMENT
- Credit Card -- CHARGE and PAYMENT
- Liability -- INCREMENT and DECREMENT

1.48 CheckItOut!: Data Entry -- ` / (Cleared)

A transaction can be marked as cleared by moving the mouse \leftrightarrow into the cleared box. The pointer will change to a checkmark. Pressing the <Left-Mouse> button will mark the transaction as cleared.

This is not the recommended way to clear transactions. Normally, you should use the

Reconcile

function to clear transactions for bank and credit card accounts when you receive your monthly statement. The

Adjust Balance

function can be used for other account types.

If you clear a transaction manually using the mouse, the checkmark that is displayed is rendered with a lighter checkmark. Transactions that have been processed using the Reconcile or Adjust Balance functions are rendered with a heavy checkmark to distinguish normal reconciliation verses manual clearing. After the next successful reconcile or adjust balance, manually cleared transactions are converted to normal completed status.

DATE	NUMBER	DESCRIPTION	PAYMENT	DEPOSIT	` /	BALANCE
		CATEGORY				
						0.00

1.49 CheckItOut!: Data Entry -- Balance

This field contains account balance after applying the value of this transaction. You can not enter any data in this field, it is for display purposes only. Changes in the amount fields affect the balance field when the transaction is recorded.

DATE	NUMBER	DESCRIPTION	PAYMENT	DEPOSIT	` /	BALANCE
		CATEGORY				
						0.00

1.50 CheckItOut!: Data Entry -- Category

This field contains a category for the transaction. If you enter anything in this field, it must be a category from the category/transfer list. If what you have entered is not a valid category, you are prompted with a requester to [Set Up] a new category, [Select] one from the category list or [Cancel] to return to the category data entry field. The maximum number of characters you can enter in this field is 49.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | \'/ | BALANCE |
|-----+
|      |         | CATEGORY    |         |         |     |         |
+-----+
|      |         |             |         |         |     | 0.00 |
|-----+
|      |         |             |         |         |     |         |
+-----+

```

When categorizing transactions in CheckItOut! SmartType speeds things up. SmartType scans the category/transfer list as you type, it automatically fills in the rest of the category with the first one that matches what you have entered. As soon as you are satisfied with the category, you can press <Tab>, SmartType automatically fills in the rest of the category field for you. If the category is new and therefore is not in the category list, SmartType immediately recognizes this and allows you to enter a new category. To separate a category and subcategory use : as a delimiter.

To transfer funds between accounts, select a transfer category. More information is available on

Fund Transfers Between Accounts

You can also use some other SmartType shortcut keys. These keys allow

you to quickly search the category/transfer list for the one you want. The following is a table of these special keys and functions:

- <+> and <=> -- Selects the next category in the list.
- <-> and <_> -- Selects the previous category in the list.
- <:> -- Allows you to skip to a subcategory.

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

1.51 CheckItOut!: Data Entry -- Memo

This field contains another description for the transaction. You can enter any data you like in this field. The maximum number of characters you can enter in this field is 39.

```

+-----+
|DATE | NUMBER | DESCRIPTION | PAYMENT | DEPOSIT | \ / | BALANCE |
|-----+
|      |         | CATEGORY   |         |         |    |         |
+-----+

1.52 CheckItOut!: Special Keys

CheckItOut! supports a number of shortcut keys that are useful to edit information you have entered. The following is a table of these special edit keys and functions:

Ctrl <-

Control-Backspace allows you to delete from the cursor to the beginning of the current word.

Ctrl

Control-Delete allows you to delete from the cursor to the beginning of the next word.

Ctrl ->

Control-Right-Arrow allows you to move the cursor to the beginning of the next word.

Ctrl <-

Control-Left-Arrow allows you to move the cursor to the beginning of the current word.

<Enter> or <Return>

These keys are a shortcut for pressing the [Record] button.

<Esc>

This key is a shortcut for pressing the [Restore] or [Cancel] buttons.

1.53 CheckItOut!: Special Date Keys

When entering dates with CheckItOut!, a number of shortcut keys are available. These keys allow you to quickly modify the date field. The following is a table of these special date keys and functions:

```
<B> and <b> -- Sets the date to the Beginning of the year (01/01)
<E> and <e> -- Sets the date to the End of the year (12/31)

<F> and <f> -- Sets the date to the First of the month
<M> and <m> -- Sets the date to the Middle of the month
<L> and <l> -- Sets the date to the Llast of the month

<T> and <t> -- Sets the date to Today
<+> and <=> -- Increases the date by one day
<-> and <_> -- Decreases the date by one day
```

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

1.54 CheckItOut!: Special Number Keys

When entering check numbers in CheckItOut! a couple of SmartType shortcut keys are available. These keys allow you to quickly modify the number field. The following is a table of these special keys and functions:

```
<+> and <=> -- Increases the last check number you entered by one.
<-> and <_> -- Decreases the last check number you entered by one.
```

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

1.55 CheckItOut!: Special Description Keys

You can use a couple of shortcut keys to quickly search the SmartType transaction list for the description you want. The following is a table of these special keys and functions:

```
<+> and <=> -- Selects the next transaction in the SmartType list.
<-> and <_> -- Selects the previous transaction in the SmartType list.
```

If you need to enter <+>, <=>, <->, or <_> simply hold the <Ctrl> key down and press the desired key.

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

1.56 CheckItOut!: Special Category Keys

When you enter category information in a transaction, separate the category and subcategory using : as a delimiter. For example if you were categorizing a check to the auto repair person who worked on your Mazda, you might enter the category information as Auto:Repairs:Mazda

You can use the following SmartType shortcut keys to quickly search the category/transfer list for the one you want. The following is a table of these special keys and functions:

<+> and <=> -- Selects the next category in the list.
<-> and <_> -- Selects the previous category in the list.
<:> -- Allows you to skip to a subcategory.

In addition to these shortcut keys, a number of Generic Shortcut Keys can be used to modify this field.

1.57 CheckItOut!: Registering

Upon registering the CheckItOut! program you will receive a key that unlocks the features of the CheckItOut! program. As a registered user, you will receive the latest version of the CheckItOut! program and will be notified when new versions are available.

To register the CheckItOut! program send \$40 to Bug Free Development

Include a completed copy of the printout the Registration Form . The

system configuration information is completely confidential and will only be used by Bug Free Development to tune applications preferences. Use <Right-Amiga-P> while displaying the registration form page in AmigaGuide to print out the registration form.

Your name will be added to our registration database and you will be sent a registration serial number. When you receive the registration information, enter it into the CheckItOut! program by clicking on the Registration gadget. The registration fill-in form is pretty self explanatory. You must be exact when entering the information (even upper/lower case).

When you register, you agree to all terms involved in licensing the CheckItOut! program. This includes agreeing with the copyright notice. Breaking a copyright IS a felony in the eyes of the law.
