Welcome to Wayzata's Best of PC Shareware 2.0!   (c) 1994

This disk contains 900+ PC games, utilities, programs,
etc. (Over 15,000 files). Open the category directories
to view/use/browse the files.

Register and receive information about special offers and
upgrades! Use the enclosed registration card or the file
"Register.txt".

**IMPORTANT NOTICE about shareware: Most of the programs provided
are shareware and require that you send a payment to the program
author if you decide to keep and use a program past the shareware
trial period. The necessary information about the author can be found
in the provided database, text files in the directories, and within the
program.

Finding out about the programs (beyond browsing the folders).
We have provided an indexed TextWare database that allows you
to read about the games, find out about their authors, shareware fee,
rating, location on the CD-ROM, and search for any text. This database
also allows you to access the programs without using DOS.

Getting Started (using the TextWare Index):

   1. At the DOS prompt, change your drive letter to the CD-ROM drive.
   2. At the DOS prompt, type   BESTOF
           Textware will boot up automatically and display the database.
   3. For help with running Textware, refer to Textware directions
            included with the disc packaging, or the on line manual for
            help running textware.

The programs on the disc have been categorized within the database. These
categories are:

1.   Run Me

                     -This option will execute the program from the
                      CD-ROM without installing it on your hard drive.

2.   Install Me

                     -This option calls the program to execute its
                      install procedure. This will install
                      the program on your hard disk.

3.   Take Me There

                     -This option temporarily exits Textware to the DOS
                      directory where the program is located.

4.   Copy To Hard Disk
                     -This option will copy the program to your hard disk
                      and launch it. You can use this option as many times
                      as you like, it will only add space to your hard drive
                      once.

To execute these options, simply move the cursor (with the mouse or arrow keys) to the highlighted area. Then click with the mouse or press enter. The program may also require a write to disk when it executes, which is not possible since CD-ROMs are read only. Each program will execute properly if the program and all of its related files are copied to a write able source (hard or floppy drive).
