Registration

ArcTime is shareware! Your support of this and other shareware titles will encourage developers to continue to bring you high-quality, low-cost software. You are entitled to use this product for evaluation purposes for 15 days. If you find this product worthwhile, you may obtain a license allowing you to continue to use the product for \$5.00 USD.

Registration will allow you access to technical support. In addition, registration will entitle you to receive the latest registered version now (via Internet)*, and access to future enhancements of the product. For your convenience a registration form is included with the product distribution.

Or, you may write out the following information on a sheet of paper and mail it along with \$5.00 (check or money order) to:

Rob Batchelder
BrainChild Software
16 Glendale Avenue
Saugus, MA 01906-2724

Include your:

Name:

Street Address, City, State, Zip:

E-mail Address:

Internet users will receive the latest release via e-mail.

(* You can also obtain a 3.5" diskette containing the latest release for an additional \$3 shipping/handling fee.)

What It Does

ArcTime allows you to select those files which were modified during a given time period. For example, suppose you want to back up just the files that you worked on today. ArcTime starts up with the date range set for today. Clicking on the Select Files button will list all the files in the chosen directory that have modification times between midnight and now. You then choose a directory to copy the files to, click on the Copy button and you're done. You can adjust the time period to include to whatever date & time range you might need.

If you pay bills online, develop software, write school papers, anything that changes some files in a directory, but not necessarily all of them, then ArcTime will help you save just the work you need to -- quickly and easily.

This is an evaluation version. For support and upgrades, please [register](#) today. Thanks for your support.

Entering Dates

There are three different ways to enter date values into the 'To' and 'From' fields. Most simply you can type in a date in mm/dd/yy format. Or, tapping either the '+' or '-' keys while one of the date fields is highlighted will increment or decrement respectively the date value in one day intervals. Finally, double clicking on the date field brings up a dialog box which allows you to select a date from a graphic calendar.

Getting File Information

You can view the last modification time and size of a file by highlighting the file name in the Selected Files list. The information will then be displayed in the text window below the list.

Deselecting A File

Highlighting a file name in the File Selected box and pressing the Delete key will remove the file from the list and keep it from being copied.

Entering Times

Times can be entered into the To and From boxes manually and adjusted in one hour increments by hitting the '+' and '-' keys.

Overwriting Files

Existing files will not be overwritten without your permission. If a file with the same name already exists in the target directory, you will be presented with a dialog box warning you of the conflict. Then you are allowed to cancel or proceed with the operation.

License

You are entitled to use this software un-registered for evaluation purposes only, for a period of 15 days from the date of installation. At the end of this trial period, you must either purchase a license to use this product (see [Registration](#)), or you must remove the software and its associated files from the computer it is installed on.

There may be an expiration date built into the software which will disable some or all of the functionality of the product prior to the end of that 15-day trial period. If this happens and you would like more time to evaluate the product, then contact the [author](#) and special arrangements can be made.

This software cannot be redistributed for profit, in whole or in part, alone or as part of a larger collection, without the express written approval of the [author](#).

Site licensing arrangements are available, contact the [author](#) for details.
