Known problems

The program has some small bugs and problems that will, if it is possible, be corrected in the releases. The bugs and problems that we know about at this moment are listed below:

- The virtual desktop doesn't always display the windows correctly.
- The mainwindow will always do full-drag, both by re-sizing and moving.
- Not all controls (listview, buttons etc.) are painted properly under Windows NT.

This problem can be corrected by using the shell-update for NT or waiting for our release that fixes this.
