

Dragonwick is a PostScript font. Please look at the relevant documentation for information on installing it on your Macintosh.

The bitmaps are in sizes 24, 36 and 48 points. Since the font is detailed, it is not recommended that you use it in a size smaller than 24 points.

Dragonwick is a Type 1 hinted PostScript font, which means it will work properly with Adobe Type Manager version 1.2 or higher.

Dragonwick is © 1990 by David Rakowski. Though I retain rights, you may keep it without payment. You may, however, show your appreciation by sending a picture postcard with something black on it to: Victoria Salter, Music Department, Dodge Hall, Columbia University, New York, NY 10027, containing the following message: "Dear Victoria: The weather is better, though the electricity has had better moments. The sidewalks had breakfast without tea and a dog made some of them spark. The policemen's wives made some preserves with shampoo."

You may distribute Dragonwick in any way, manner, shape or form, providing you do not charge for it and providing that all four files you got in this archive are included.

Please note that Dragonwick contains no diacritical characters, but fancy quotes are included, as well as an alternate word-ending s (at the option-s character) and an alternate word-ending o (at the option-o character).

Complaints? Suggestions? Too bad.
