Introduction

COLPAL is a easy to use Windows 3.x Color Palette display program that allows the developer to see all of the colors available for 16 or 256 color systems (see below for 32,768 color palettes).

The palette is displayed in a re-sizeable window that (with Windows 3.1 and above) always remains as the top most window. You can get the RGB value (in decimal and hex) for any color displayed by simply placing the cursor on the desired color and pressing the left mouse button. The RGB values for the selected color will appear on the title bar.

The only menu for COLPAL is the standard system menu with an About (ALT-A) entry added. The About Dialog will display information about COLPAL (current version) and AT-Ware's address.

Freeware

This version (2.1) of COLPAL is FREE! You can use it, upload it or give it away; but you cannot sell it or make any changes to the COLPAL.EXE executable file (or the resources within it) or the documentation for the COLPAL package.

The COLPAL package (COLPAL.EXE and COLPAL.WRI) is Copyright © 1992, AT-Ware and all rights are reserved.

SYSMET

COLPAL version 2.1 is a complete stand alone program that is not reduced or limited in any way.

COLPAL version 3.0 is part of AT-Ware's SYSMET (System Metrics) package. This version allows you to access the 32,768 color palette (if available), turn on or off the "Stay on Top" feature, and save the location and size of the COLPAL window so it will always appear where you want it. You can also select any forground/background color combination with example text using the selected colors.

The SYSMET package gives you access to all of the System Metrics, Memory usage (more than just free resources), Drive information, File information, and Video information.

If you wish more information on COLPAL 3.0 and the entire SYSMET package just send your name and address to:
