

## HLS & LOGO Saver

### Two new modules for Screen Peace

Enclosed in this ZIP file are two new screen saver modules for Anthony Andersen's Screen Peace screen saver for Windows 3.0. These two modules are "HLS Saver" and "LOGO Saver". To install these new modules, simply close Screen Peace, then copy the HLS.SPX and LOGO.SPX files into your SPX directory (where 'Saver Path' is set to in your WIN.INI under the '[Screen Peace]' header) and, if you want predefined LOGOs, the SAVER.INI file into your Windows directory (where WIN.INI is), then restart Screen Peace. Screen Peace must be closed and re-run for the changes to take effect.

Both savers generate LOGOs when active. While HLS generates various kinds of the HLS-Logo, the LOGO saver can activate different LOGOs, which you can create, change or delete. With the LOGO saver you can create your personal LOGO screen saver. The best way to see how this works is to look at the examples in SAVER.INI, which can be accessed when activating the LOGO saver via the usual Screen Peace listbox, then selecting the "Edit LOGO" button. A second way to change the LOGOs is explained below.

The settings of both savers are stored by default in the SAVER.INI file. This default can be changed by adding one line "INI-File= ..." to the [Screen Peace] section of your WIN.INI file. The default looks like this:

```
[Screen Peace]
...
INI-File=SAVER.INI
...
```

You can use a file name with full path name, if you want; you can even use WIN.INI, but you shouldn't do so - the performance of your system will decrease!

The current Version of LOGO Saver does not provide a method to disable LOGOs, but it is possible to edit the SAVER.INI file to do it. In this file there is a section named [LOGO Saver], which looks like this:

```
[LOGO Saver]
On=y
AutoChg=y
Name=Caterpillar
Name1=Balls
Name2=Bar
Name3=Caterpillar
...
Name15=Wiper
Name16=Worm
```

Key "Name" identifies the current LOGO, while "Name1", "Name2" , ... identify the current set of LOGOs. They must be numbered continuous but need not be ordered! To disable a LOGO place a comment mark before the line and change the key of the LOGO with the highest number to the one of the commented LOGO. If, for example, LOGO Bar was disabled, the SAVER.INI file would look like this:

```
[LOGO Saver]
On=y
AutoChg=y
Name=Caterpillar
Name1=Balls
;Name2=Bar
Name3=Caterpillar
...
Name15=Wiper
Name2=Worm
```

In the SAVER.INI file, there is also one section for each LOGO. If you prefer, the LOGO Lines (named "Line1", "Line2", ...) can be edited here instead of using LOGO Saver's dialog box.

To re-enable a previously disabled LOGO, simply remove the comment mark at the beginning of the line, and change the number of the LOGO to current last number plus 1, for example from ";Name2=Bar" to "Name16=Bar".

The savers are copyrighted by HLS, no commercial use allowed! Although the programs were developed and tested very carefully, the author cannot be liable for any damage caused by any use of the programs; if you use the programs, it's your own risk!

If you have any problems, questions, bugs or comments, send them to  
hls@lefuefix.rz.rwth-aachen.de!

I can't guarantee that I will send a reply in finite time, because I don't have too much time at the moment, but if it's important, your chance of a reply increases!

**IMPORTANT:** If you like one or both of the new savers and continue to use them, don't forget an appropriate donation - the savers are CharityWare! But don't send money to the author ...
