PAGAN DAYBOOK

If you'd like to see this file again in the future, click on the What's New icon.

Complete documentation for Pagan Daybook can be found by double clicking on the Documentation icon.

The Pagan Daybook is bookware. For more information, please consult the Pagan Daybook documentation or the closing beg notice in Pagan Daybook itself.

Note: The registration system for Pagan Daybook for Windows has changed. Rather than using registration numbers supplied by Alchemy Mindworks, the Pagan Daybook can now be registered by entering a citation from The Order. If you have previously registered a copy of Pagan Daybook, you'll need your copy of The Order to re-register this one.

Complete instructions for the new registration system can be found in the Pagan Daybook documentation.

This release of Pagan Daybook adds several new features and stomps a few bugs:

- ⌘ Windows 95 32-bit version. Pagan Daybook is available in both sixteen- and 32-bit releases. The 32-bit release is designed to run under Windows 95.
- ⌘ Windows 95 disabled the system menu on older versions of Pagan Daybook, making it sort of impossible to set it up, register it or use the Calendar feature. The system menu is back.
- ⌘ Added a "stay on top" switch.
- ⌘ Fixed several cosmetic nasties that occurred when Pagan Daybook ran with large fonts.
- ⌘ Corrected a really embarrassing spelling mistake.
- ⌘ Caught a potential memory problem.
