Download the latest Windows 95 shareware from the Internet

It would be impossible for us to have the latest Windows 95 shareware and freeware on this CD-ROM. You'll need to visit some of the sites in Table 33-2 if you want to find the latest software. We have included below a list of software that has come been released since we finished gathering software for this CD-ROM.

You can download this software from the Internet by double-clicking on the URL for the software given below. It may be the case that the URL for the software is out of date by the time that you attempt to download it. If your browser returns an error after you double-click a URL, you can still get to the file that you wish to download by "going up the directory tree." That is, shorten the URL in your Browser's URL display window from the right hand end back to the previous slash and press the Return key. Keep trying till you get to a displayable page. Use the guides on the page to get to the file that you want to download. You may have to think about just how to do that.

These lists and descriptions are taken with permission from two mailing lists that are associated with two shareware web sites: [Tucows](#) and [Windows95.com](#). You can go to either of these sites and search for the file that your wish to download. Other sites can be found at our [Windows 95 Secrets web site](#).

Lance Jones, the publisher of the In Touch: Win95 Software Edition mailing list, and who works in cooperation with Steve Jenkins at Windows95.com produced the first list and descriptions.

Scott A. Swedorski at Tucows produced the second list. I would suggest going to both of these sites and taking a look for yourself. Also sign up to be on their mail lists as per the instructions given below or at the site.

In Touch

The In-Touch: Win95 Software Edition Copyright (c) 1995 Lance Jones. All Rights Reserved.

To SUBSCRIBE to the In-Touch: Win95 Software Edition mailing list, send E-mail to listserv@peach.ease.lsoft.com with "subscribe in-touch yourfirstname yourlastname" as the body of the E-mail (don't include the ""). If John Smith was your name, you would type "subscribe in-touch John Smith" (without the ""). Do not include anything in the SUBJECT line. To UNSUBSCRIBE, type "signoff in-touch" and send it to the above address.

The digest is compiled in its entirety by Lance Jones sword@islandnet.com.

All of these files can be downloaded by cutting and pasting the provided URLs into your browser or by visiting the windows95.com website at <http://www.windows95.com/>. At Windows95.com simply choose the 32-bit shareware icon and select the appropriate shareware category (they are provided in the digest).

The current and previous week's digests are now also available via email at <http://www.islandnet.com/~sword/digest.html>. the digest(s) will be immediately emailed to you upon request.

Back issues of the digest are now available via FTP server at <http://www.windows95.com/apps/intouch/previous.html> or via automatic E-mail responder. You can now get any back issue by sending an empty message to:

digestxx@wdwbbs.metronet.com

where "xx" is to be replaced with the number of the issue you want, such as digest02, digest07, digest13, etc. It's an infoserver, so no subject, and no message text are required. The back issue will be attached as text following a short reply message.

The In-Touch: Win95 Software Edition newsletter is sponsored by L-Soft International Inc., the makers of the popular LISTSERV(TM) software for Windows NT, Windows 95, Unix (13 brands), OpenVMS and VM. The newsletter currently has 41,853 members and is hosted on the largest LISTSERV site in the world, which processes over 1,700,000 daily deliveries. The LISTSERV software runs on a P133 with 64Mb and Windows NT, and the messages are delivered by a redundant configuration of AlphaServer 2100 engines, one with Windows NT and one with OpenVMS. For more information, feel free to visit L-Soft's website at <http://www.lsoft.com>, or write to info@lsoft.com.

Coming up soon: LSMTP(TM) for Windows NT - up to 100,000 SMTP deliveries an hour on a \$5,000 PC!

For any of you who are interested, the In-Touch: Win95 Edition is now the fourth largest mailing list on the Internet (according to L-Soft's Listserv rankings). Number one is C|Net, the Computer Network (316,000 members); number two is the Wall Street Journal (110,000); number three is CMP Publications' TechLink (45,000); and then there's our list (42,000) -- with your help, we might leapfrog into the third position by next week's issue!!

The information contained within each Win95 digest is copyrighted by Lance Jones. This information may be used only for recreational purposes (i.e. for downloading files) and personal informative purposes only. Any other use of the information above in a document, list, web/ftp site, similar

medium, or any other medium or forum must first be expressly authorized in writing by the author and copyright holder, Lance Jones.

Safety Net

Version: 4.4
File Date: 03/11/96
Size: 153 Kb
Download Time: Approx. 2 minutes with 14.4 modem
Developed By: CT Software
Registration: Shareware \$15.00
File Location: <http://members.aol.com/ron2222/sftynt44.zip>
Windows95.com: Category -- Anti-Virus & Disk Utilities
Description:

Safety Net is a great utility for backing-up critical Windows system files. The program has a default setting, which will copy all "DAT" (registry) files, "INI" files and "INF" files from both your windows and windows\system directories (the copied files can be placed either in a separate directory or onto a floppy diskette). Safety Net will also copy your "config.sys" and "autoexec.bat" files for safekeeping. When used in conjunction with a virus scanner, this application can help prevent countless hours of grief in the unlikely event of a total system "meltdown"!

VShield

Version: Beta 3

File Date: 03/15/96

Size: 587 Kb

Download Time: Approx. 9 minutes with 14.4 modem

Developed By: McAfee Associates, Inc.

Registration: Free Beta Evaluation

File Location: <http://www.zdnet.com/plweb-cgi/swlib/download.pl?VSHL32.ZIP?0005TM?utilities>

Windows95.com: Category -- Anti-Virus & Disk Utilities

Description:

McAfee has re-designed the classic VShield product for Windows 95. The application no longer requires the use of a DOS TSR, and the interface has been completely overhauled for the 32-bit operating system. Vshield provides "ON-ACCESS" scanning for computer viruses. This means that, once enabled, the program will provide real-time protection against the contracting and spreading of viruses. The scan options are extremely customizable via a VShield Configuration Manager, allowing you to scan files upon Run, Copy, Create or Rename; scan disks upon access or shutdown; scan particular types of files (program files, compressed files). The program demands a minimum of 8 MB of RAM, and 16 MBs would be optimal to maintain system speed.

ASAP WordPower

Version: 1.95
File Date: 01/25/96
Size: 1.4 Mb
Download Time: Approx. 22 minutes with 14.4 modem
Developed By: Software Publishing Corp.
Registration: Free Beta Evaluation
File Location: <ftp://206.79.154.4/asapzip.exe>
Windows95.com: Category -- APPLICATION SOFTWARE
Description:

ASAP WordPower is the standalone application which allows you to create slideshow presentations similar to those created with Microsoft's Power Point package. Text and graphics can be imported from documents or directories, and easily inserted into the pages of your presentation. The advantage of using this program over Power Point is the option to include the slideshow in your Web pages, and view it using the ASAP WebShow plug-in for Netscape. Use "Outline" to jot down your ideas using page titles, major points, and sub-points, see an overview of a presentation, change the order of pages, or spell-check the entire presentation. Use "Preview" to create pages visually: change the layout, design, and color scheme; add pictures such as clipart, a logo, a chart, and a background; add special text such as page numbers, headers, footers, picture captions, and lead-ins; or change the size and font of text. And finally, use "Present" to display a presentation on the computer screen. Context sensitive help is available.

File Manager Jr. 95

Version: 7.0B

File Date: 02/23/96

Size: 77 Kb

Download Time: Approx. 1 minute with 14.4 modem

Developed By: Charles Maher

Registration: Shareware \$19.95 US

File Location: ftp://ftp.zdnet.com/swlib/utilities/file_utilities/fmanjr.zip

Windows95.com: Category -- Application Add-Ins

Description:

File Manager Jr. is an add-on for Microsoft's Word for Windows 95, Version 7.0. The application allows you to move, copy, delete and rename files without actually leaving Word. Files can be printed without having to open them, back-up files can be deleted in one or multiple folders and deleted files can be easily recovered. If you spend much of your time in Word, and perform more than a few file-management operations in a typical session, you'll find that File Manager Jr. is a handy alternative to Windows Explorer.

WetSock

Version: 1.0
File Date: 02/02/96
Size: 49 Kb
Download Time: Approx. 1 minute with 14.4 modem
Developed By: Locutus Codeware
Registration: Shareware \$12.00 US
File Location: <ftp://ftp.wimsey.com/priv/locutus/wetsock1.zip>
Windows95.com: Category -- APPLICATION SOFTWARE
Description:

WetSock brings current weather conditions and forecasts to your Windows 95 desktop. The program places an icon in the system tray (by the clock), and when you access the Internet, it gathers current weather information from the National Science Foundation Weather Service server and brings it back to your desktop. Results include a current condition forecast (temperature, cloud cover, barometric pressure, winds, etc.), a two-day forecast and an extended forecast. WetSock is an innovative must-have for people who enjoy the outdoors, but take note that only U.S. weather information is currently available for download.

InstantOn

Version: 1.1
File Date: 03/14/96
Size: 960 Kb
Download Time: Approx. 16 minutes with 14.4 modem
Developed By: Intel Corporation
Registration: Freeware
File Location: <http://www.intel.com/IAL/inston/ion.zip>
Windows95.com: Category -- Automation Utilities
Description:

InstantOn was developed to take full advantage of an Energy Star compliant PC's power-saving features. When user or application activity ceases, an Energy Star compliant PC goes into a low-power energy efficient state. InstantOn returns the computer to full power immediately, whenever required, and it provides power management, scheduling, and crash recovery capabilities. The application can perform activities that you schedule, and if necessary, wakes up the PC from a lower power state to perform those scheduled activities. This allows your computer to perform unattended network backups, virus scanning, system maintenance, online services data collection, etc. You can schedule actions to occur at certain times, on certain days, or in response to power changes or changes in the status of running applications. InstantOn can also restart applications after power failures or application crashes. This capability can help restore your system to its previous operating state without your intervention.

Command Line 95

Version: 1.0
File Date: 01/20/96
Size: 28 Kb
Download Time: Approx. 30 seconds with 14.4 modem
Developed By: Joshua Seales
Registration: Shareware \$5.00 US
File Location: <http://www.cris.com/~randybrg/win95/cmdline95.zip>
Windows95.com: Category -- COMMAND SHELLS
Description:

Command Line 95 is designed for people who like to use Windows 95 applications but miss the MS-DOS style navigation that command lines provide (used to provide). The graphical interfaces of new operating systems like Windows 95 have replaced MS-DOS commands with the mouse, allowing you to copy files, change directories and execute files with the click of a button. Although this may be easier for newer computer users, it can become slow and annoying for people who prefer the command line of days gone by. This application allows you "die-hards" to use commands and execute files as is done in MS-DOS, while staying in the graphical environment of Win95.

MS-DOS Prompt Shell Extension

Version: 1.1
File Date: 01/16/96
Size: 172 Kb
Download Time: Approx. 3 minutes with 14.4 modem
Developed By: Derek Smith
Registration: Freeware
File Location: <http://shell.masterpiece.com/derek/binaries/shexcd.zip>
Windows95.com: Category -- COMMAND SHELLS
Description:

The MS-DOS Prompt Shell Extension adds an "MS-DOS Prompt" menu item to the right-click menu of all drives and folders (including the start button) in Windows 95 Explorer. This means that a right-click on a folder will open an MS-DOS window in the corresponding directory that you have selected. It's definitely a time saver, especially for DOS junkies!

SuperDIR 95

Version: 6.00b4
File Date: 01/27/96
Size: 46 Kb
Download Time: Approx. 30 seconds with 14.4 modem
Developed By: Omnivision Technologies
Registration: Free Beta Evaluation
File Location: <http://www.monash.edu.au/~hofman/supdir/sdir95b4.zip>
Windows95.com: Category -- COMMAND SHELLS
Description:

SuperDIR 95 is a complete replacement for the MS-DOS "DIRectory" command, which provides all of the usual features of the "DIR" command, plus a nice assortment of other useful features. Apparently, SuperDIR 95 is the only "DIR" replacement utility currently in existence which correctly implements the new long filename system of Windows 95, known as VFAT. The application will open an MS-DOS window and display the directory contents according to your specifications: it automatically maximizes the number of columns displayed, based on the current display format; it displays filenames in different colors, based on their file extensions; it displays files based on their file attributes; and it sorts files based on various criteria in either a horizontal or vertical direction.

PGPfone

Version: 1.0b1
File Date: 03/21/96
Size: 245 Kb
Download Time: Approx. 4 minutes with 14.4 modem
Developed By: Philip Zimmerman
Registration: Freeware
File Location: <http://web.mit.edu/network/pgpfone/pgpfone-form.html>
Windows95.com: Category -- Communications & Chat Clients
Description:

PGPfone (Pretty Good Privacy Phone) is a software package that turns your desktop or notebook computer into a secure telephone. It uses speech compression and strong cryptographic protocols to give you the ability to have a real-time secure telephone conversation. PGPfone takes your voice from a microphone, then continuously digitizes, compresses and encrypts it, and sends it out through a modem to the person at the other end who is also running PGPfone. All cryptographic and speech compression protocols are negotiated dynamically and invisibly, providing a natural user interface similar to using a normal telephone. Public-key protocols are used to negotiate keys without the need for secure channels. Before you can utilize the encryption features of this program, you must first obtain the Pretty Good Privacy (PGP) encryption module. It's available from the MIT Distribution site, located at:

<http://web.mit.edu/network/pgp.html>

All you need to run PGPfone is a decent modem (28.8 Kbps V.34 recommended), and a multimedia PC running Windows 95, with at least a 66 MHz 486 CPU (Pentium recommended), sound card, microphone, and speakers or headphones.

RoundTable

Version: 1.0b4
File Date: 02/19/96
Size: 949 Kb
Download Time: Approx. 15 minutes with 14.4 modem
Developed By: ForeFront Group, Inc.
Registration: Free Beta Evaluation
File Location: <http://www.ffg.com/download.rt.win95.1.html>
Windows95.com: Category -- Communications & Chat Clients
Description:

RoundTable is a 32-bit chat client which allows you to share information with other RoundTable users over the Internet, via the ForeFront Conference Server program (located remotely). The program can be launched and seamlessly connected to the Conference Server from your favorite Web browser. To view or participate in a current Internet meeting, simply visit ForeFront's Conference Site using your browser, and click on the meeting of your choice. Your browser will then automatically launch RoundTable, ask you for your Nickname, and allow you to enter the meeting. This meeting window displays a "Meeting Roster", the "Chat Panel", and the "Canvas". The Roster lists everyone in the meeting; the Chat Panel is used to type your comments and read everyone else's; and the Canvas is used to share images, URLs and documents with other participants in real-time. Chat features include the ability to whisper to selected participants, to announce participant entry and exit, and to auto-scroll chat dialog. These topical meetings, in my opinion, are far more interesting than generic "free-for-all" chat rooms which tend to focus only on "small talk".

WinZip Disk Spanner

Version: Beta
Size: 133Kb
Download Time: Approx. 2 minutes with 14.4 modem
Developed By: Nico Mak Computing, Inc.
Registration: Freeware Beta
File Location: <ftp://ftp.winzip.com/winzip/beta/wzspnb32.exe>
Windows95.com: Category -- COMPRESSION UTILITIES
Description:

WinZip's "Multiple Disk Spanning" feature allows you to create and access archives that span multiple floppy disks. This feature is useful when the data that is being archived (compressed or uncompressed) does not fit on one floppy disk. It's normally available via the Add and the Drop dialog boxes, but until now, it has required the use of PKZIP and PKUNZIP. After installing this add-on to WinZip 6.0a, the application will no longer require PKZIP and PKUNZIP when working with archives that span multiple floppy disks. It may sound a little perplexing now, but features such as disk spanning are becoming extremely practical, and they create opportunities not available in a 1.44 megabyte world.

WinZip Self-Extractor

Version: 1.1Beta3

Size: 181 Kb

Download Time: Approx. 3 minutes with 14.4 modem

Developed By: Nico Mak Computing, Inc.

Registration: Shareware \$49.00 US

File Location: <ftp://ftp.winzip.com/winzip/beta/wzsebeta.exe>

Windows95.com: Category -- COMPRESSION UTILITIES

Description:

WinZip Self-Extractor is an optional add-on utility for WinZip that creates native Windows and Windows 95 self-extracting ZIP files. A self-extracting ZIP file is an executable program file (.EXE file) that includes a ZIP file and software to extract or "unzip" the contents of the ZIP file. Users can run (execute) a self-extracting ZIP file just as they run any other program. These self-extracting ZIP files are ideal for electronic file distribution because they: can contain multiple compressed files, ensuring that important files do not become separated from the rest of the package; allow the receiver to use a familiar Windows interface to decompress files, without owning or knowing how to use a separate unzip utility; optionally run a "setup" or "installation" program, which may be included by the developer when the files are decompressed. Shareware developers will love this one!

MicroAngelo

Version: 2.0

File Date: 02/24/96

Size: 631 Kb

Download Time: Approx. 6 minutes with 14.4 modem

Developed By: Impact Software

Registration: Shareware \$24.95 US

File Location: <ftp://www.impactsoft.com/pub/impactsoft/muangl20.zip>

Windows95.com: Category -- Cursors & Icons

Description:

No, it's not the infamous virus! MicroAngelo is an outstanding icon, cursor, and animated cursor editing studio. The package contains five logical and wonderfully designed components: the Browser, Engineer, Librarian, Studio, and the Animator. The Browser helps you to locate the files on your system that contain icons. It has "intelligent" tabs in its main window that you can set to any drive and folder, and it quickly locates files of a particular type (i.e. icon, icon library, pointers, cursors, animated cursors). The Engineer is used to change the system icons on your Windows desktop, Start Menu, and other areas. It also provides a System Settings tab where you can choose among several options for your Windows 95 system configuration. The Librarian allows you to view, create, and manage libraries of icons. You can create new library files and then drag and drop icons or other libraries into the Librarian from Windows Explorer or from Microangelo's Browser. The Studio is used to create or edit icons and cursors. It provides a rich set of editing tools and controls that will help you edit icon and cursor images in all sizes and color formats. Finally, the Animator enables you to edit and create animated cursors. MicroAngelo is a "must have" for anyone interested in expanding on Windows 95 system graphics.

AutoDial Registry Patch

Version: 1.0

File Date: 03/16/96

Size: 49 Kb

Download Time: Approx. 1 minute with 14.4 modem

Developed By: Creative Element

Registration: Freeware

File Location: <ftp://ftp.creativelement.com/pub/users/creativelement/win95ann/autodial.zip>

Windows95.com: Category -- Dialup Utilities

Description:

If you've purchased the Plus! pack from Microsoft, or have installed Internet Explorer, the autodial feature will have already been added to your system. However, if you're a Netscape user and would like the "Connect To" dialog box to open whenever you run a 32-bit winsock application, this Windows 95 patch will do the trick. Instructions are not included with the file, so here they are:

*Download the AutoDial Registry Patch.

*If you don't have the file URL.DLL in your Windows\System directory, copy the one included in this ZIP file to that location.

*Double-click on the AutoDial.REG file to apply the patch to your registry.

FPArchie

Version: 0.7b1
File Date: 01/18/96
Size: 173Kb
Download Time: Approx. 3 minutes with 14.4 modem
Developed By: FPWare
Registration: Freeware
File Location: <http://www.cris.com/~randybrg/win95/fpar07b1.zip>
Windows95.com: Category -- FTP, FINGER AND TERMINALS
Description:

FPArchie is a fantastic Archie client for Windows 95. For those of you who may be unfamiliar with Archie, it is essentially an index of anonymous FTP servers all over the world. If you are looking for a file, Archie is still probably the quickest way to locate it. Some Archie systems track archive sites globally, and others only track the archive sites in their country, region or continent (in order to reduce the load on trans-oceanic links). Client programs like FPArchie communicate via the "Prospero Distributed File System" protocol with Archie servers, and then perform the specified queries and return the results to the user. This application offers some extremely helpful features. It's multi-threading capability means that while FPArchie is busy, you can use your Internet connection for other purposes. It's easy to use because it utilizes the same interface as the file/folder "Find" applet in Windows 95. As the program collects data about the file you are searching for, it displays the information as it's received, and if you think you have enough, simply abort the query. Finally, FPArchie offers built-in FTP support, so when you've located the appropriate file, you can download it immediately with the Retrieve option. Give this one a try!

GearHeads

Version: Demo
File Date: 03/01/96
Size: 1.1 Mb
Download Time: Approx. 18 minutes with 14.4 modem
Developed By: Philips Media & R/GA Digital Studios
Registration: Free Demo
File Location: <ftp://205.197.244.11/pub/leland/pc/geardemo.exe>
Windows95.com: Category -- N/A
Description:

I mistakenly stumbled upon GearHeads, thinking it was a 32-bit game developed specifically for Windows 95. When I discovered the quality of the demo, I decided to include it in this week's digest anyway (after all, it is my publication ;^)). GearHeads is a game of battling wind-up toys. The first person to get twenty-one toys across your opponent's side of the playing field (looks like a chess board) wins the game. Each toy has a different weight, speed, style of movement and set of special abilities. Once a toy is released onto the board, you no longer control it. It's a 16-bit playable demo, but I highly recommend it!

Nanocore

Version: 1.2

File Date: 02/12/96

Size: 531 Kb

Download Time: Approx. 8 minutes with 14.4 modem

Developed By: Paul Keet

Registration: Shareware \$18.00 US

File Location: <ftp://ftp.winsources.ziff.com/pub/wsources/960213/nanocore.zip>

Windows95.com: Category -- Fun & Games

Description:

Nanocore is a unique 32-bit spin-off from the "old" arcade favorite, BreakOut. It provides a virtual-reality-like 3-D environment which can certainly challenge the average person's depth perception. The quality of graphics is acceptable, the sounds is decent, and the concept is great. Mastering the game however, will depend on your ability to judge the bouncing ball's distance from your paddle. It's not easy!

Shockwave Assault

Version: Demo
File Date: 02/12/96
Size: 8.7 Mb
Download Time: Approx. 135 minutes with 14.4 modem
Developed By: Electronic Arts Studios
Registration: Free Demo
File Location: http://www.ea.com/DEMOS/sw_demo.zip
Windows95.com: Category -- FUN & GAMES
Description:

Here's another wild game for Windows 95 that requires a T-1 connection for an acceptable download time. To quote Electronic Arts' description of the fast and furious demo: "A vast armada of alien warships unleash a deadly assault on the Earth. Taken by surprise, Earth's forces are crushed and only a small squadron of experimental fighters remain. The only chance for survival lies with you and a band of crack fighter pilots. Counterattacking from the orbital space carrier OMAHA, use of all your piloting skills to drive the Alien invaders out of Earth's cities, past the Moon, and back through the mysterious JumpGate from which they came!". Shockwave Assault runs in Windows 95 native mode, provides an easy-to-use interface, includes 50 minutes of "Hollywood" video, and showcases some stunning 3-D landscapes. This is a demo of their CD-ROM.

Silent Thunder

Version: 1.0

File Date: 03/16/96

Size: 3.7 Mb

Download Time: Approx. 60 minutes with 14.4 modem

Developed By: Sierra On-Line

Registration: Free Commercial Demo

File Location: http://wuarchive.wustl.edu/archive01/pub/MSDOS_UPLOADS/silent2.zip

Windows95.com: Category -- Fun & Games

Description:

Silent Thunder is a new flight simulation game for Windows 95. You can take on drug lords, terrorists, and dictators in an A-10 Thunderbolt II fighter, and enjoy the mind-blowing 3-D graphics courtesy of Microsoft's new DirectDraw driver. As I write this I'm downloading the program, but I'll be unable to provide you with a description of my own. I didn't think the avid game players would appreciate me waiting until next week, so Sierra On-Line quotes: "Incredible in every detail, Silent Thunder has realistic worlds with texture-mapped terrain and 3-D objects, 3-D fire and explosions so real you'll taste the smoke and dodge the debris, and leading edge high-res SVGA graphics and red book audio sound. Easy to learn, but challenging to master, Silent Thunder provides high-impact entertainment for avid flight sim and arcade players alike!"

Slots Of Trivia

Version: 1.1
File Date: 03/10/96
Size: 517 Kb
Download Time: Approx. 8 minutes with 14.4 modem
Developed By: Ultimate Software
Registration: Shareware \$20.00 US
File Location: <http://softsite.com/ulti/95stgn11.zip>
Windows95.com: Category -- Fun & Games
Description:

Slots of Trivia is a graphical slot machine game with a twist. It combines the excitement of a game of chance with the challenge found in a game of skill. In essence, the program is a slot machine crossed with "Trivial Pursuit". It's not often that I end up spending hours evaluating a piece of software, but this game is definitely addicting (it's a good thing no real money is required!). There are several versions of Slots of Trivia which can be added, in the form of new data files: general knowledge trivia, general sports trivia, baseball trivia, golf trivia, with more files being added each month. The slot wheel graphics correspond to the game being played, and there are a multitude of realistic sounds to add "casino atmosphere".

Someone's Coming

Version: 1.0

File Date: 02/20/96

Size: 740 Kb

Download Time: Approx. 12 minutes with 14.4 modem

Developed By: Jonathan Reinberg

Registration: Freeware

File Location: <http://www.happypuppy.com/digitale/gx/someone.zip>

Windows95.com: Category -- Fun & Games

Description:

Now here's some freeware with a purpose!! Someone's Coming is a problem solver for all of you Win95 game junkies who love to play at work. When you run the application, it places an exclamation mark icon in the desktop system tray (by the clock), and when it's clicked, a very business-like window pops-up. The window makes it appear as though you're working hard on a business presentation, instead of playing the latest and greatest 32-bit arcade adventure. When the boss leaves, simply click on the "Exit" button and resume your game playing. Please, no flames from department heads or managers -- I just report the shareware news!

Super Ice Qube Hopper

Version: 1.0
File Date: 03/09/96
Size: 1.8 Mb
Download Time: Approx. 28 minutes with 14.4 modem
Developed By: SGN/Starline
Registration: Shareware \$19.00 US
File Location: <http://members.aol.com/starlinepb/sih95sw.zip>
Windows95.com: Category -- Fun & Games
Description:

Super Ice Qube Hopper is an arcade style video game based upon the popular Q-Bert adventure of early 1980's fame. Qubey, your penguin hero, must successfully bounce his way over pyramids of ice cubes, avoiding the inevitable perils and pitfalls which await him. This is one of the first games to utilize Microsoft's new DirectX gaming system, which must also be installed on your computer. Graphics, animation, sound and speech are all greatly enhanced through DirectX technology, and new games are sure to take full advantage of its capabilities. The registered version of Super Ice Qube Hopper even allows you to design your own levels. The DirectX set-up file can be found at:

<ftp://members.aol.com/sqhwinv2/directx.zip>

Thexder

Version: Demo
File Date: 02/11/96
Size: 1.4 Mb
Download Time: Approx. 22 minutes with 14.4 modem
Developed By: Sierra On-Line, Inc.
Registration: Free Demo
File Location: <ftp://www.sierra.com/pub/sierra/demo/thexdemo.exe>
Windows95.com: Category -- FUN & GAMES
Description:

Thexder is a scrolling, arcade-action "run, jump and shoot" adventure. There are aliens and other wicked foes to battle as you make your way through a maze of platforms and tunnels. The demo only supports five levels, as opposed to fifty on the commercial version. There are limited sound effects and only a "low-res" graphics mode is available. Regardless of Thexder's demo shortcomings, game players will still definitely enjoy this optimized for Windows 95 entertainer.

WarBirds 95

Version: 1.02
File Date: 01/30/96
Size: 8.5 Mb
Download Time: Approx. 136 minutes with 14.4 modem (WOW!)
Developed By: Interactive Creations Inc.
Registration: 5 hours of free arena time (\$2.00 hourly rate after that)
File Location: <ftp://icigames.com/pub/wbfiles/win95/wb95cd.exe>
More Info URL: <http://www.icigames.com/>
Windows95.com: Category -- FUN AND GAMES
Description:

Unfortunately, I did not have the time to download this monstrous application, but die-hard game players would certainly want me to include some information about it in this week's digest. WarBirds is a network-based, multi-player flight combat simulation, which provides full screen (1024x768x256) color graphics running at 20 frames per second on a 486DX4-100 (no hardware graphics acceleration is required). You can test your aviation skills against hundreds of online pilots as you fly over texture-mapped terrain or engage in historical air battle re-creations. I highly recommend visiting the homepage above, simply to ensure that you don't waste your time downloading what must be the largest game I've seen available on the 'Net.

Search And Replace For Windows 95

Version: 2.5
File Date: 01/30/96
Size: 192 Kb
Download Time: Approx. 3 minutes with 14.4 modem
Developed By: Funduc Software, Inc.
Registration: Shareware \$15.00 US
File Location: <http://ourworld.compuserve.com:80/homepages/funduc/sr.zip>
Windows95.com: Category -- GENERAL UTILITIES
Description:

Search And Replace is a 32-bit search utility that you can use to find and replace a given string in multiple files, across multiple directories. The unregistered version only allows you to search for text strings; the registered version enables you to replace some, all or none of these strings with another string. A "Touch" button allows you to change the date and time of the files you specify, and the "Search Results" list allows you to view the discovered files using the associated viewer, or the context of the line where the string was found. I attempted to look for occurrences of my own name across my entire hard disk drive. There were 3200 files to check, and the total time involved was a little over 2 minutes (I'm running a Pentium 75 with 8 MB of RAM). I would highly recommend this application to anyone who spends a lot of time processing Word documents.

Shovelt

Version: 1.2
File Date: 02/23/96
Size: 15 Kb
Download Time: Approx. 15 seconds with 14.4 modem
Developed By: Phil Hord
Registration: Freeware
File Location: ftp://ftp.zdnet.com/swlib/utilities/system_utilities/shovit.zip
Windows95.com: Category –General Utilities
Description:

Shovelt is a helpful little utility which fixes a glitch on the Windows 95 desktop. This glitch occurs when the taskbar is placed on the top of the screen instead of on the bottom. Sometimes, after launching a new application, the opened program's caption bar appears underneath the Win95 taskbar. And since you can't click on the caption bar to maximize the window correctly, you must first hide the problematic taskbar and then proceed to maximize the application window. Shovelt fixes the problem by watching for windows that are created with obscured caption bars and then by moving them so that they're visible. It can be set to automatically do this (every 5 seconds) or only on command.

Small Utilities For Windows 95

Version: 1.0
File Date: 02/04/96
Size: 900 Kb
Download Time: Approx. 14 minutes with 14.4 modem
Developed By: Scott McMahan
Registration: Shareware \$7.50 US
File Location: <ftp://ftp.interpath.net/tmp/SUTILS.ZIP>
Windows95.com: Category -- GENERAL UTILITIES
Description:

Small Utilities For Windows 95 is aptly named. It's a buttonbar which resides on your desktop and provides some very useful, time-saving tools. You can access these utilities from the buttonbar, from Shortcuts on your desktop or anywhere else, from macro languages or from batch files. The Small Utilities package definitely addresses the need for small, quick applications which eliminate specific inadequacies in the system utilities provided with the Windows 95 operating system. There is a "Note" utility which allows to quickly jot down ideas or reminders, a "Quick Browse" utility which enables you to explore directory trees and folders, a "ShutDown" utility which saves you from using the standard Start Menu, an uncompress utility and a hexadecimal conversion utility. Small Utilities is a time-saving, unobtrusive addition to the Win95 desktop.

StopLight

Version: 1.0b2
File Date: 01/28/96
Size: 952 Kb
Download Time: Approx. 16 minutes with 14.4 modem
Developed By: SafetyNet, Inc.
Registration: Free Beta Evaluation
File Location: <ftp://gti.net/pub/safetynet/sl95b2.exe>
Windows95.com: Category -- GENERAL UTILITIES
Description:

StopLight is a terrific PC security system that provides maximum protection against an array of unauthorized user activities. The program provides a screen saver and keyboard lock that you can activate either by "hot key", Windows icon, or when the system is left unattended for a period of time. While the keyboard lock is active, your system will be secure from intruders, but existing programs will continue to run uninterrupted. If you allow access to your system, users actions are quietly monitored in the background and compared to a security set-up that you define. If the user should attempt to cross any security boundaries, such as accessing a restricted file, or attempting to reformat the hard disk, the system will deny the activity before any harm is done. Another attractive feature of StopLight is its ability to create an audit log, providing detailed system usage, such as programs that were run and files that were accessed. The audit log also records the time and date that users logged onto your computer. StopLight administration is done through the Windows 95 interface, and full context-sensitive help and step-by-step examples make security setup quite painless.

ACDSee

Version: 1.0 Beta
File Date: 02/23/96
Size: 770 Kb
Download Time: Approx. 12 minutes with 14.4 modem
Developed By: ACD Systems
Registration: Shareware \$20.00 US
File Location: <ftp://ftp.pinc.com/pub/acd/acdsee95/acdcn10b.zip>
Windows95.com: Category -- Graphics Utilities
Description:

ACDSee is a combined 32-bit image viewer and browser. As an image viewer, the program is very efficient at quickly decoding and displaying many different image formats. A unique feature of ACDSee is its use of "incremental display", which means that images can be displayed on the fly as they're decoded. This simply translates into extremely fast response times for such operations as image scrolling and zooming. As an image browser, ACDSee provides you with a high-speed preview feature that lets you quickly and easily take a peek at images without interrupting or slowing down your search. The program also supports image file descriptions which allow you to annotate a file with a phrase, without actually changing the file name. Other features include the ability to quickly alter your desktop wallpaper pattern (JPEG or bitmap), full on-line help with tool tips and context-sensitive pop-up help, drag and drop support for viewing single and multiple files, and optional image-shrinking to fit various sized windows. This shareware app will not disappoint!

Vector Reality

Version: 2.0

File Date: 02/17/96

Size: 2.3 Mb

Download Time: Approx. 36 minutes with 14.4 modem

Developed By: High Velocity Systems

Registration: Free Demo

File Location: DISK 1: <ftp://avalon.viewpoint.com/avalon/demos/vecd20d1.zip>

DISK 2: <ftp://avalon.viewpoint.com/avalon/demos/vecd20d2.zip>

Windows95.com: Category -- Graphics Utilities

Description:

Please note that it's necessary to download both of the above mentioned files. Vector Reality is a top-notch, 32-bit three-dimensional modeler and renderer. The modeler allows you to draw three-dimensional objects by utilizing three separate (two-dimensional) views: the top, right, and front views. The combination of these views enables you to manipulate the full range of three-dimensional motion. In Vector Reality the 3-D surface data is stored as a collection of polygons. The polygons form only an approximation of an actual surface, but by increasing the number of polygons in the approximation, the stored surface can be made to look more and more like an actual surface. The renderer takes the 3-D surface description of the modeler data and outputs a photo-realistic, shaded two-dimensional picture which appears three-dimensional. Many "materials" (metals, woods, etc.) can be applied to a surface to achieve this effect, and lighting can add yet another photo-realistic quality to the object. The demonstration version of Vector Reality does not allow you to save your work, and the working window has been reduced in size.

My Personal Diary

Version: 5.01

File Date: 02/23/96

Size: 232 Kb

Download Time: Approx. 4 minutes with 14.4 modem

Developed By: Chris Maresco

Registration: Shareware \$24.95 US

File Location: ftp://ftp.zdnet.com/swlib/applications/personal_information_managers/mpd32.zip

Windows95.com: Category -- Information & Time Management Utilities

Description:

My Personal Diary is a great 32-bit diary application with some very nice features. All entries in the journal are stored in encrypted files and are password-protected to ensure maximum privacy. The program fully supports all Win95 features (i.e. long filenames) and it also supports a variety of fonts, colors and paragraph formatting in daily entries. The user interface strongly resembles an actual diary and it can be set-up to allow access to many users, without enabling access to each other's entries. You can easily search for particular text in single or multiple entries, browse entries by date or store all of your most important information (passwords, PIN numbers, account numbers) in the "Treasure Chest" without worry. Separate components such as an address/phone list a "to do" list with reminders really add to this application's functionality.

Scratch Pad

Version: 1.2
File Date: 02/21/96
Size: 661 Kb
Download Time: Approx. 11 minutes with 14.4 modem
Developed By: Lee Software
Registration: Shareware \$15.00 US
File Location: <http://www2.sliceoflife.com/Slice/leesoft/scratchp.zip>
Windows95.com: Category -- Information & Time Management Utilities
Description:

Scratch Pad is a terrific text editor with many features not currently found in other Windows WordPad replacement applications. The program allows you to jump directly to any line in your document by entering a line number. You can work with standard ASCII text files, Rich Text Format files, or Scratch Pad files (.SCT), which may utilize "bookmarks", colors, and fonts. The program enables you to differentiate between particular groups of files by assigning each group a different colored "folder". Scratch Pad regularly saves your entries, minimizing the risk of tragedy in the unlikely event of a power failure or hard disk crash (knock on wood). Another nice feature of this application is its OLE (Object Linking and Embedding) support, allowing you to insert a sound file (and more) right into your Scratch Pad document. The program is slick, but the help file is very limited.

Braintree eBase/Mailer

Version: 1.0
File Date: 03/20/96
Size: 1.9 Mb
Download Time: Approx. 30 minutes with 14.4 modem
Developed By: BrainTree, Ltd.
Registration: Shareware \$29.00 US (free 21-day evaluation)
File Location: <ftp://ftp.braintree.com/pub/ebm/btebm.exe>
Windows95.com: Category -- Mail Clients & Utilities
Description:

BrainTree eBase/Mailer is a 32-bit E-mailing list manager. The program facilitates the management of multiple E-mail lists and helps streamline the tedious task of keeping them current. It's built with "relational database" technology, which means that when you add or change addressee categories, the list(s) that the addressee belongs to also changes automatically (category-driven mailings). The application was designed for mailings of any size, with no limit on the number of addressees on an individual mailing list. Because it's a real database, multi-user operation and single user operation are both supported. A nice feature of eBase/Mailer is its ability to create mailing lists out of other mailing lists, greatly simplifying the process of distributing E-mail to various groups within a company network (or within a circle of friends). Free use of this application requires online registration.

Eudora Light

Version: 1.5.4b11

File Date: 01/12/96

Size: 1.98 Mb

Download Time: Approx. 32 minutes with 14.4 modem

Developed By: Qualcomm, Inc.

Registration: Freeware

File location: <ftp://ftp.qualcomm.com/quest/windows/eudora/1.5/beta/eu154b11.exe>

Windows95.com: Category -- MAIL CLIENTS AND UTILITIES

Description:

Eudora Light is the freeware version of Eudora Pro 32-bit, and it's definitely worth the download time. The interface will be very familiar to current Eudora users, except for the initial set-up and configuration routine. Not to worry, the once tedious task has been replaced with a more intuitive and graphical rendition. New features of the program include a native, fully compatible 32-bit version for the Windows 95 and Windows NT operating systems. Context-sensitive online help allows you to click on items in the user interface, and then read brief explanations of what the items do. "Active URL s" automatically open your World Wide Web browser and then take you to the selected URL -- great for reading my digest!. There is a new Dial-Up option for setting-up connections, and a handy feature which allows you to switch between messages by using the Ctrl+arrow keys. A floating toolbar can be placed anywhere on your desktop, and a "New Mail" icon displays the number of new messages in the Win95 system task tray. Very nice application!

Pegasus Mail

Version: 2.30

File Date: 03/16/96

Size: 417 Kb

Download Time: Approx. 7 minutes with 14.4 modem

Developed By: David Harris

Registration: Freeware

File Location: <http://risc.ua.edu/pub/network/pegasus/wpm32wb1.zip>

Windows95.com: Category -- Mail Clients & Utilities

Description:

As far as mail clients go, Pegasus Mail and Eudora are the top contenders, and now both programs are available in 32-bit form. I couldn't decide whether or not Pegasus Mail was a "new application" or a "old application update", since this version is identical in appearance, user interface and function set to the 2.30 16-bit release. It should be regarded as a starting point for further development, because it does not yet take full advantage of the features of the Win95 interface. For more information on Pegasus Mail, visit: <http://www.cuslm.ca/pegasus/>

ProPGP

Version: 1.0Beta1
File Date: 02/16/96
Size: 1.9 Mb
Download Time: Approx. 30 minutes with 14.4 modem
Developed By: Richard Rubin
Registration: Freeware
File Location: <http://www.schaft.com/ftp/Win95/propgp10.zip>
Windows95.com: Category -- Mail Clients & Utilities
Description:

ProPGP is a 32-bit front-end for creating "Pretty Good Privacy" (PGP) files that can be sent encrypted over the Internet. The program was designed so that someone knowing no PGP commands could still achieve the desired encryption results with ease. Almost all options in PGP 2.6.2 are supported (the current standard), including such operations as adding public keys to your "keyring" and viewing "fingerprints". ProPGP will even allow you to encrypt data from the Windows 95 clipboard (a future version will enable you to actually decrypt it again!). Please note that this application does not include the PGP program needed to encrypt/decrypt data. It must be obtained from an FTP site on the Internet due to copyright laws -- one such location is <http://web.mit.edu/network/pgp.html> -- MIT's page allows U.S. and Canadian residents to obtain a copy of PGP. Here is a quote from their Web page:

"PGP or Pretty Good (TM) Privacy is a high-security cryptographic software application that allows people to exchange messages with both privacy and authentication. Privacy means that only those intended to receive a message can read it. By providing the ability to encrypt messages, PGP provides protection against anyone eavesdropping on the network. Even if a packet is intercepted, it will be unreadable to the snooper.

Authentication ensures that a message appearing to be from a particular person can have originated from that person only, and that the message has not been altered. In addition to its support for messages, PGP also enables you to encrypt files stored on your computer. MIT distributes PGP free for non-commercial use. This distribution is done in cooperation with Philip Zimmermann, the author of PGP, and with RSA Data Security, Inc., which licenses patents to the public-key encryption technology on which PGP relies."

Cool Edit 95

Version: Beta 1
File Date: 12/22/95
Size: 1.2 Mb
Download Time: Approx. 19 minutes with 14.4 modem
Developed By: Syntrillium Software Corp.
Registration: Free Beta Evaluation (Final Version Shareware \$50.00 US)
File Location: <ftp://earth.netzone.com/pub/syntril/cool95.zip>
Windows95.com: Category -- MULTIMEDIA AND GRAPHICS APPS
Description:

Cool Edit was probably the best sound processing shareware that I had ever tried. The 16-bit version has now given way to Cool Edit for Windows 95, and the 32-bit version is even more amazing. Keep in mind that this free evaluation provides all of the features of the regular version, but you can only use certain features at the same time. If you're looking for a utility to play and record basic sounds (i.e. your voice), stick to the Win95 Media Player. If, on the other hand, you're in need of a flexible, robust sound editing and synthesizing application, give Cool Edit 95 a try. Some of the features include the ability to synthesize just about any sound using the noise and tone generation functions, sample rate conversion, the ability to use any sample as an "instrument" and set it to music (like a dog barking, Jingle Bells, or Tarzan yelling a national anthem), no restrictions on the size of the wave sample other than your hard drive limitations, support for PCM, Microsoft .WAV, Sound Blaster .VOC, raw PCM, ASCII Text, AU, and Apple AIFF, continuous echo of all or part of a sample, a built-in CD player when the [MCI] CD Audio driver is loaded, and the ability spatially locate sound sources to appear as if they are coming from different directions. The Help file is user-friendly and explains all of the functions of Cool Edit in wonderful detail.

QuickTime For Windows 95

Version: 2.1.1 Beta
File Date: 01/24/96
Size: 1.7 Mb
Download Time: Approx. 28 minutes with 14.4 modem
Developed By: Apple Computer, Inc.
Registration: Free Beta Evaluation
More Info URL: <http://quicktime.apple.com/>
File Location: <http://quicktime.apple.com/emmys/QT32INST.EXE>
Windows95.com: Category -- MULTIMEDIA AND GRAPHICS
Description:

QuickTime For Windows 95 is the new 32-bit version of Apple's proprietary movie player. A QuickTime movie is a file that can contain video images, animation and sound, and it consists of a series of still images played in succession (frames). There is a host of third-party programs which let you play QuickTime movies within ordinary documents, such as word-processing files, spreadsheets, and presentations. To achieve the best performance for viewing movies, they should be played from your hard disk or from a CD-ROM disc (movies on floppy disks should first be copied to your hard disk before playing them). Also included in this package is Picture Viewer, which allows you to view a "picture file" (a DOS file containing a QuickTime for Windows picture, characterized by the DOS suffix ".PIC"). You can zoom in and out, print, copy, and get information about a picture, and if it's compressed, Picture Viewer will automatically uncompress it (maintaining excellent image quality and color). Visit Apple's website (above) to see some examples -- and please keep in mind that this is not Apple's QuickTime VR.

Remotely Possible/32

Version: 1.1c
File Date: 01/06/95
Size: 1.3 Mb
Download Time: Approx. 20 minutes with 14.4 modem
Developed By: Avalan Technology, Inc.
Registration: Free 30-Day Evaluation
File location: <http://www.avalan.com/rp3295.exe>
Windows95.com: Category -- Network Utilities
Description:

Each week I attempt to provide you with information about the best 32-bit shareware applications available on the 'Net. There have been a few instances where I have missed or overlooked a terrific program, and Remotely Possible/32 is just such an instance. The program is a wonderful 32-bit remote control communication software package. It has a built-in dialler for direct modem connections, and it supports TCP/IP for connecting over LAN's, WAN's, SLIP, PPP, RAS and the Internet. Remote communication applications are ideal for people who need to access a PC over any distance (i.e. customer support and help desk reps, home office professionals, telecommuters, classroom trainers, etc.). Remotely Possible/32 includes several programs which allow you to edit access codes to provide security, change user preferences, remotely control several PCs, transfer files among multiple PCs, and even establish interactive chat sessions. Online context-sensitive help is always available and the Quick Steps tutorial does a fine job of explaining the multitude of features in the package.

Internet Conference

Version: 1.1.b3
File Date: 02/04/96
Size: 1.1 Mb
Download Time: Approx. 17 minutes with 14.4 modem
Developed By: Insitu, Inc.
Registration: Free Beta Evaluation
File Location: <http://www.insitu.com/files/i3211b3.exe>
Windows95.com: Category -- NEWS & CHAT
Description:

Internet Conference is definitely a "killer app", and it offers a glimpse at the next step in Internet communication. The application combines the familiar Internet chat with the ability to share Web images, documents or pictures over the Internet or any TCP/IP network. The Internet Conference "whiteboard" then allows you to scribble, postulate or debate issues and ideas, the same way you would with a piece of paper or on an office whiteboard. Shape tools allow you to draft concepts and ideas quickly and easily, and Internet Conference can also be expanded to include voice communication through "Internet Phone" from Vocaltec. Even video could be added to this application via the "CuSeeMe" product. The interface has the standard Windows 95 look and feel, including button bar, menu, toolbar and context sensitive help. This is a program which opens up a whole new world of visual communication through the Internet and the World Wide Web. The only downside is its powerful, addictive quality -- Internet chat will never be the same.

HS-Install

Version: 2.0
File Date: 02/11/96
Size: 650 Kb
Download Time: Approx. 10 minutes with 14.4 modem
Developed By: Harrisoft, Inc.
Registration: Shareware \$49.95 US
File Location: <http://www.dnh.mv.net:80/ipusers/harrisoft/hsi.zip>
Windows95.com: Category -- PROGRAMMING FILES
Description:

Here is a beautiful application for all of you experienced or aspiring Win95 software/shareware developers. HS-Install is a tool for constructing software installation programs. It provides a simple, yet intuitive way for developers to create functional set-up programs using a familiar Windows 95 interface-style set-up wizard. HS-Install was developed for Windows 95, but it can generate an install program for Windows 3.1x as well. Noteworthy features include selective installation of components for a multi-component application, use of your logo, bitmaps, and billboards during installation, wizards to guide the design and set-up process, creation of multiple directories on different drives, full updating of the Windows Registry, the ability to launch help files, text files, and any other application at any time during or after the installation, the ability to intelligently update or modify system files, AUTOEXEC.BAT and CONFIG.SYS, private and system INI files, and completely integrated uninstall capabilities. The generated set-up package can be as small as 80 Kb, depending on your chosen options, and the small overhead leaves more space on the installation floppy disks for your own files (reducing the number of diskettes needed for distribution).

Amazing JPEG Screen Saver

Version: 1.10

File Date: 02/06/95

Size: 147 Kb

Download Time: Approx. 2 minutes with 14.4 modem

Developed By: ESM Software

Registration: Shareware \$12.95 US

File Location: <http://www.winsite.com/pc/win95/demo/aj95v110.zip>

Windows95.com: Category -- Screen Savers & Backgrounds

Description:

The Amazing JPEG Screen Saver is a neat utility for Windows 95 which allows you to customize your screen saving session with any of your own JPEG images. A set-up dialog box is used to select the JPEG file, and the program can be configured to load the images progressively, so there is no waiting. In other words, the image starts off in low resolution, and then the quality improves until maximum resolution is obtained. The utility works on both 256 color and True Color displays, it automatically changes images after a specified time period, there are different image movements from which to select, and automatic image re-sizing is available. Beware, the unregistered version includes a banner that remains on the screen while the screen saver is activated.

Desktop Changer

Version: 1.2
File Date: 02/24/96
Size: 90 Kb
Download Time: Approx. 1 minute with 14.4 modem
Developed By: Christopher Conti
Registration: Shareware \$10.00 US
File location: <http://www.crl.com/~rickd/IonFlux/sharew/dtc12.zip>
Windows95.com: Category -- Backgrounds & Screen Savers
Description:

Desktop Changer is a compact utility which allows you to quickly and easily change your Win95 desktop wallpaper (.BMP), screensaver (.SCR), start sounds (.WAV), and exit sounds (.WAV). The program can be configured to randomly select a background upon start-up, and a delay can be activated for the screen saver. Functional, quick to download and very easy to use!

Anywhere 95

Version: 2.31
File Date: 02/09/96
Size: 667 Kb
Download Time: Approx. 11 minutes with 14.4 modem
Developed By: Dreamland Software
Registration: Shareware \$20.00 US
File Location: <http://home.earthlink.net/~guitrzan/AW231.zip>
Windows95.com: Category -- SHELL ENHANCEMENTS
Description:

Anywhere 95 is a helpful utility which allows you to easily move or copy files with a single click of the right mouse button. Desktop icons, Explorer folders and individual files can be selected, and a menu of options will pop-up with various choices about your request. You decide on a move or a copy, you can change the name of the copied/moved file, you can create a new directory to send the file or you can reverse your actions by selecting the "Forget It" button. This one is a great time saver.

Change File Type 96

Version: 1.0
File Date: 03/13/96
Size: 63 Kb
Download Time: Approx. 1 minute with 14.4 modem
Developed By: Jack Mathews
Registration: Freeware
File Location: <http://pegasus.cc.ucf.edu/~jm66626/filetype.zip>
Windows95.com: Category -- Shell Enhancements
Description:

Change File Type 96 is a great Win95 shell extension which allows you to alter file types quickly. After you install the program, it adds "Change File Type" to the right-click menu of any kind of file (except Shortcuts), followed by a dialog box which provides you with several options for making the necessary changes. This application seamlessly incorporates a very useful tool into your Windows 95 desktop.

Desktop Informant

Version: 1.0
File Date: 03/05/96
Size: 1.4 Mb
Download Time: Approx. 22 minutes with 14.4 modem
Developed By: Tom Kier
Registration: Freeware
File Location: <ftp://ftp.winsite.com/pub/pc/win95/desktop/infrm10.exe>
Windows95.com: Category -- Shell Enhancements
Description:

Desktop Informant is a great utility that displays detailed file information for any file in Windows 95. When you hold the cursor over a file's icon for a brief moment, the program will display all details available for that file (size, type, last modified). The information is displayed in an easy to read pop-up bubble window, and file details are never truncated or scrolled off the screen, as often happens when viewing them with the Windows 95 shell. Desktop Informant can display details for any file shown on the desktop, in folder windows, in Explorer windows and in open dialogs. The program will also work with any application that uses the new list view control. Enjoy this free time saver!

Dir3D

Version: 1.0
File Date: 03/21/96
Size: 1.6 Mb
Download Time: Approx. 26 minutes with 14.4 modem
Developed By: Regnoc Software
Registration: Shareware \$20.00 US (crippled after 30-day trial)
File Location: http://wuarchive.wustl.edu/pub/WINDOWS_UPLOADS/dir3d.zip
Windows95.com: Category -- Shell Enhancements
Description:

Dir3D creates a 3-D representation of your hard disk. It's been designed as a direct replacement for the Windows 95 Explorer interface, and the program will allow you to perform all of the same functions as Explorer. The application uses a three-dimensional user interface to give the illusion of moving freely (even flying) about the inside of your hard disk or network directory. Dir3D uses the OpenGL graphics libraries available with the 32-bit versions of Windows to render the 3-D images in real-time, creating and updating your virtual world as you manipulate files and directories. Sound effects are also available to increase the realism of this completely imaginary simulation. Dir3D shows the directory structure of your hard disk as a series of tall rectangular solids that resemble buildings. When Dir3D first starts, it displays the root directory in front, followed by all the sub-directories of the root. Because all of the images in Dir3D's world are created dynamically, you can change the appearance of your virtual world any way you like. Colors, spacing, sizes, lighting, movement, and sound options are all completely user configurable. Quite a concept!

File Search 95

Version: 1.0
File Date: 03/04/96
Size: 22 Kb
Download Time: Approx. 30 seconds with 14.4 modem
Developed By: Chris Blackburn
Registration: Shareware \$10.00 US
File location: <http://www.cris.com/~randybrg/files/search95.zip>
Windows95.com: Category -- Shell Enhancements
Description:

File Search is a handy utility which offers you ability to easily search your disk drives for files by extension. It's a great program for locating Windows "temp" (.TMP) files which collect dust and consume memory resources if left untouched for prolonged periods. The application comes with a built-in text editor called Note Editor 95 and a helpful utility called StartUp, which allows you to search for programs and then run them when they are found. Also included is Icon Plus!, a program that views Windows "icon" (.ICO) files and SearchIT, a utility that enables you to quickly scan a disk drive for duplicate files. File Search 95 utilizes Help buttons and is very easy to use.

HTML Printer Driver

Version: 1.0
File Date: 01/17/96
Size: 92 Kb
Download Time: Approx. 2 minutes with 14.4 modem
Developed By: Microsoft Win95 Doc Imaging Group
Registration: Freeware PowerToy
File Location: <http://www.microsoft.com/windows/download/HTMLdrv.exe>
Windows95.com: Category -- SHELL ENHANCEMENTS
Description:

This PowerToy is installed and used like a printer driver, and it allows most Windows applications to generate HTML files that do not support a "Save As HTML" option. Text that would have been sent to a printer is actually intercepted and written to a file with an .HTM extension. Embedded bitmap files (.BMP) are converted and written to JPEG (.JPG) files, with pointers embedded in the .HTM file. The .HTM file is then suitable for publishing on the World Wide Web and for viewing by a variety of Web browsers, but in some cases it may be necessary to hand edit the HTML file to produce optimal output. Interesting features include the ability to convert columns and tabs into HTML tables, support for HTML tables within tables (only when using Internet Explorer 2.0), the option to auto-launch your favorite Web Browser, horizontal rule placement between pages, complete text formatting retention, and support for long filenames. It's quite a lot of power for such a small package.

Telephony Location Selector

Version: 1.0
File Date: 01/17/96
Size: 9 Kb
Download Time: Approx. 10 seconds with 14.4 modem
Developed By: Microsoft Corp.
Registration: Freeware PowerToy
File Location: http://www.microsoft.com/windows/download/Tapi_tna.exe
Windows95.com: Category -- SHELL ENHANCEMENTS
Description:

The Telephony Location Selector (sounds like serious business!) PowerToy is a must for anyone who uses Microsoft's telephone dialer application from several geographical locations (e.g. from a laptop computer). The program places an icon in your TaskBar notification area, beside the clock, and a series of menus will pop-up when the icon is double-clicked. These menus enable you to quickly change your current TAPI location, to bring up your current dialing properties, or to run the Phone Dialer. It's another time saver from the team in Redmond, Washington.

WrapUp

Version: 1.3

File Date: 02/02/96

Size: 98 Kb

Download Time: Approx. 2 minutes with 14.4 modem

Developed By: Tessler's Nifty Tools

Registration: Shareware \$39.00 US

File location: http://ourworld.compuserve.com/homepages/NIFTY_TOOLS/wrapup.zip

Windows95.com: Category -- SHELL ENHANCEMENTS

Description:

WrapUp provides a logical extension to the Win95 desktop. It functions in the same manner (but in the opposite direction) as the StartUp group in your Start Menu, but instead of automatically launching programs when Windows is begun, WrapUp automatically executes applications that you specify upon Windows "ShutDown". This can serve many useful purposes, such as automatic backing-up of your PC's hard disk(s), logging out of your PC network (LAN), accessing your favorite online stock-quote system and retrieving your latest stock prices, sending queued E-mail messages, or ejecting the CD-ROM disk from your drive. WrapUp will also close any open applications on your desktop, providing a safe and efficient system shutdown.

Desk List

Version: 1.00
File Date: 02/01/96
Size: 14 Kb
Download Time: Approx. 15 seconds with 14.4 modem
Developed By: George Harth IV
Registration: Freeware
File location: <http://phoenix.kent.edu/~gharth/files/desklist.zip>
Windows95.com: Category -- ToolBars & Menu Items
Description:

Desk List is a very simple application to use and to describe. When launched, it creates an icon in the Win95 system tray (yes, by the clock). When you click on the icon, you are presented with a list of the icons which reside on your desktop (with the exception of My Computer, Recycle Bin, Network Neighbourhood, and InBox). Selecting one of the menu items has the same effect as double-clicking on the desktop icon. The reasoning behind this is clear: it eliminates the need to minimize windows or move them around when you wish to launch an application from a desktop icon.

RipBar

Version: 7.0b
File Date: 03/14/96
Size: 312 Kb
Download Time: Approx. 3 minutes with 14.4 modem
Developed By: SoftDesign
Registration: Shareware \$34.95 US
File Location: <http://mtl.net/softdesign/Files/ripbar95.zip>
Windows95.com: Category -- Toolbar & Menu Utilities
Description:

RipBar is an icon toolbar which offers a wide array of features. It combines an application toolbar, command line launching, drag and drop server, memory and system information display, post-it style notes, and hot-key support in a compact and unobtrusive package. Files may be dropped onto the application icons (which you set-up) sitting on the bar, causing the application to launch and open that particular file automatically. In addition, RipBar supports attaching sound to certain types of events, hot-key activation, program groups and more. Tools of particular interest include a system information tool, a clock tool, a resource tool, a memory tool, a task manager tool, a resource tracker, a notes tool, a RUN tool, and a disk tool. RipBar can be likened to a Swiss Army knife of desktop applications.

DerekWare HTML Author

Version: 2.0

Size: 62 Kb

Download Time: Approx. 1 minute with 14.4 modem

Developed By: Derek Smith

Registration: Freeware

File Location: <http://shell.masterpiece.com/derek/binaries/dhtml20.zip>

Windows95.com: Category -- WEB AUTHORING TOOLS

Description:

HTML Author has to be one of the smallest standalone HTML editors that I have come across. It's a 32-bit application which offers a nice selection of features, combined with a "no nonsense" user interface. It supports all HTML 2.0 tags and Microsoft Internet Explorer 2.0 extensions, as well as most Netscape Navigator extensions (who can keep up with Netscape's changes?). The program offers intelligent tag formatting, allowing you to select the text to be formatted, and then implementing the desired change with the click of a single format button. "Tag Wizards" are available for more complicated tags, including font changes, extended horizontal rules, images, dynamic images (.AVI and .MOV files), links, marquees and forms. There is even a customizable tag list, allowing you to add, remove and modify the supported tags. HTML Author is small, robust and free. Anyone looking for these features in an editor would be silly to overlook this one.

Egor Animator

Version: 1.0

File Date: 02/28/96

Size: 670 Kb

Download Time: Approx. 11 minutes with 14.4 modem

Developed By: Sausage Software (the makers of Hot Dog)

Registration: Shareware \$50.00 US

File location: [tp://ftp.zdnet.com/swlib/internet/publishing_tools/egorin.zip](ftp://ftp.zdnet.com/swlib/internet/publishing_tools/egorin.zip)

Windows95.com: Category -- Web Authoring Tools

Description:

Egor Animator is wonderful application which lets you add animations and sounds to your Web pages through Sun Microsystem Inc's Java programming language. But you don't have to be familiar with the complexities of Java because this is a visual editor. Instead of displaying only static graphics, you can now bring your pages to life with relative ease, and even if you lack the time or talent to create your own graphics, the program provides you with several pre-built animations in a Samples directory. Egor has two components: the Windows front-end (EGOR.EXE) for creating animations, and the Java applet (anim.class) for displaying them. To create an animation, you must first design a GIF or JPEG file for each frame in the animation. The behavior of the animation can then be set with an Effects dialog box, the Preview button allows you to see how the animation will look when viewed by a Web browser, and a Compile button generates HTML source code that you can paste directly into your favorite HTML file editor. Very cool program!

MS FrontPage

Version: Beta
File Date: 02/20/96
Size: 9.4 Mb
Download Time: Approx. 150 minutes with 14.4 modem
Developed By: Microsoft Corp.
Registration: Free Beta Evaluation (expires March 16, 1996)
File location: http://www.microsoft.com/msoffice/frontpage/freestuff/fs_fp_trial.htm
Windows95.com: Category -- Web Authoring Tools
Description:

To download this program, you must first complete a "free registration" form on the above mentioned Web page. FrontPage is a robust, visual client/server Web publishing tool created for both non-programmers and professional Web developers alike. It provides an extremely rich environment for anyone interested in developing and maintaining a professional Web site. The program, originally introduced by Vermeer Technologies, was designed for distributed, collaborative and multi-user work environments, and its client/server architecture supports authoring, scripting, and management of a Web site on a personal workstation, across a LAN, or even over the Internet.

With FrontPage, you can develop and maintain your Web site with the visual "FrontPage Explorer", develop high-quality pages with the "FrontPage Editor", run your Web site immediately with the "FrontPage Personal Web Server" (it fully supports HTTP and CGI standards), create Web pages and entire Web sites automatically with templates and wizards, add drop-in interactive functions and eliminate programming tasks with WebBots, and maintain your site with Web server administration tools. The program includes an extensive tutorial and context-sensitive help to explain the multitude of features and functions of FrontPage. This is easily the most comprehensive visual Web site development tool currently available. For more information about FrontPage and its many features, visit Microsoft's Web site at <http://www.microsoft.com/Msoffice/FrontPage/>.

WebCount

Version: 1.0
File Date: 03/08/96
Size: 551 Kb
Download Time: Approx. 9 minutes with 14.4 modem
Developed By: Endless Visions, Inc.
Registration: Shareware \$15.00 US
File location: <http://endlessvisions.com/WebCount/WebCount.zip>
Windows95.com: Category -- Web Authoring Tools
Description:

Here's a nice little program for those of you who operate your own Web servers. It's a CGI-program written in C++ that keeps track of the number of hits on a Web page. The graphical counter can be displayed anywhere on a page, and four different counter styles are included in the package. WebCount has been tested with Website server 1.0g, Website server 1.1, ALIBABA server, SAIC's HTTP server 1.1, Netscape server, EMWAC's HTTP server V 0.96 and Purveyor server V1.1.

WebThing

Version: 1.21
File Date: 02/14/96
Size: 1.9 Mb
Download Time: Approx. 30 minutes with 14.4 modem
Developed By: Paul Lutus
Registration: Careware (invented by Paul)
File Location: <http://id.mind.net/~lutusp/webthing.zip>
Windows95.com: Category -- WEB AUTHORING TOOLS
Description:

WebThing is ideal for anyone who is new to HTML or Web page design. The program is a free, full-featured HTML editor and workshop, which also includes some excellent tutorials on the Internet, the World Wide Web, HTML basics and Web page creation. Paul calls this application "Careware", and I would encourage you (if you choose to download this one) to read the description of his newly coined software term. With WebThing, you can create Web pages and preview them on all available browsers, interactively edit Web page resources and appearance, import full-featured text, tables and outlines into your Web page, with table structure, indentation, font color, size and face preserved, create interactive forms that launch programs to do things not possible in HTML alone, and neatly organize a set of Web pages with associated graphics, sound files, and various other resources. WebThing supports many of the HTML tags currently in use, and it can be customized to include any specialized tags that you desire (or any new tags that come into use in the future). Nice job, Paul!

Moondo

Version: 1.0a
File Date: 02/27/96
Size: 2.5 Mb
Download Time: Approx. 40 minutes with 14.4 modem
Developed By: Intel Corporation
Registration: Freeware
File Location: <http://tu cows.niia.net/files/moondo.exe>
Windows95.com: Category -- World Wide Web Browsers
Description:

Moondo is a 32-bit application which pushes the boundaries of Internet technology. The program allows you to visit 3D multi-user virtual worlds and create your own virtual worlds for others to visit. Moondo features VRML rooms and avatars, audio chat, customizable avatars, multiple views of the virtual world (different "camera angles"), and URL-based browsing of distributed Moondo servers world-wide. Once your Moondo client is connected to a room, it enables you to view the virtual room and all its occupants, move around in the virtual environment, and chat (audio, text or both) with others in that same virtual space. Everyone's avatar position is updated as they move around. Unfortunately there were no occupants in the main Moondo room when I visited, but the features of the program were simply incredible. The application is RAM-hungry, so please remember to close any open windows if you're running 8 MB, or your hard disk will tire quickly of continual swapping.

ASAP WebShow For Netscape

Version: Beta 1.0

File Date: 01/25/96

Size: 437 Kb

Download Time: Approx. 7 minutes with 14.4 modem

Developed By: Software Publishing Corp.

Registration: Free Beta Evaluation

File Location: <ftp://206.79.154.4/wsb1w32.exe>

Windows95.com: Category -- WEB BROWSER PLUG-INS AND UTILITIES

Description:

ASAP WebShow is a Netscape Navigator 2.0 plug-in which enables inline display of documents created with ASAP WordPower. Essentially this unique application allows you to view Web-based slideshow presentations, from within the Netscape browser. See below for more details.

CyberSpell For Netscape

Version: Trial
File Date: 02/24/96
Size: 1.8 Mb
Download Time: Approx. 28 minutes with 14.4 modem
Developed By: Inso Corporation
Registration: Shareware \$24.95 US (free 30-day trial)
File location: http://www.inso.com/pub/cyb10_32.exe
Windows95.com: Category -- Web Browser Plug-Ins
Description:

CyberSpell is a spell-checking tool that finds and corrects errors in E-mail messages composed in Netscape Navigator 2.0. There are two modes from which to choose: Quick Spell checks for spelling errors (including context-sensitive spelling errors) and Power Spell checks for "proofing errors" (spelling, punctuation, formatting, spacing, and some types of grammatical errors). Unlike traditional spell-checking software, Power Spell recognizes text as "correct" when it is in the form of E-mail addresses, World Wide Web addresses, Newsgroups, filenames and extensions, directory and subdirectory names, and even emoticons. This feature in itself saves considerable time and effort. CyberSpell's spelling database has over 159,300 words, including 2,600 technical and computer-related words, 2,200 names of well-known companies and products, as well as 8,500 legal, financial, business, and insurance terms.

Cyber Patrol

Version: 2.10
File Date: 01/26/96
Size: 455 Kb
Download Time: Approx. 7 minutes with 14.4 modem
Developed By: MicroSystems Software, Inc.
Registration: Free Evaluation
File location: <http://tucows.niaa.net/files/cp-setup.exe>
Windows95.com: Category -- Web Browser Utilities
Description:

Cyber Patrol is an excellent Internet access management utility that also manages application usage from a PC. The program allows parents and teachers to control the display of some materials found on the 'Net. After all, the Internet is an open environment, and this means that "it has the same mix of good and bad as you see in the world around you." Programs such as Cyber Patrol let you "censor" what is viewed on a computer by children, students, or even employees, and this is a much more viable solution than allowing governments to exercise such control over content. Cyber Patrol loads during start-up and runs in the background to control access to all associated applications. With the program, you can block access to possibly offensive Internet sites and chat groups, use the "CyberNOT" list of sites to make access decisions, restrict access to certain times of the day, limit total access time for each day and each week, control access to major on-line services, and even control access to applications on your PC, such as games and personal financial managers. All restrictions can be bypassed with a password, and system security is fully configurable to suit your needs.

iSeek

Version: 1.0
File Date: 03/15/96
Size: 973 Kb
Download Time: Approx. 16 minutes with 14.4 modem
Developed By: InfoSeek Corporation
Registration: Freeware (expires April 15/96)
File Location: <http://download.infoseek.com/download/issetup.exe>
Windows95.com: Category -- Web Browser Utilities
Description:

iSeek is an interesting application which brings the popular InfoSeek search engine and utilities directly to your Win95 desktop. An iSeek query bar resides on your desktop, allowing you to make search requests on InfoSeek without opening your browser or visiting InfoSeek's Web site. The program then returns search results in your default browser. You can enter your search as you would ask a question in normal conversation, and for more powerful search options, you can use the same syntax you use to search with Infoseek Guide. Notable features of the program include the ability to store searches that you may want to use again as icons in the iSeek window, the ability to assign a graphical icon to represent the search (and then visit the locations by double-clicking the icon), and the ability to embed iSeek icons in word processing or spreadsheet documents for others to use. There is an Explorer-style toolbar with the standard Edit and View buttons, and buttons for inserting searches and locations and changing their properties.

Look@Me

Version: 1.0
File Date: 03/12/96
Size: 1 Mb
Download Time: Approx. 16 minutes with 14.4 modem
Developed By: Farallon Computing, Inc.
Registration: Free Beta Evaluation
File Location: <http://collaborate.farallon.com/www/look/look@.exe>
Windows95.com: Category -- N/A
Description:

Look@Me is a real-time Internet collaboration tool which allows you to edit documents, review presentations, examine graphics, or provide training/support on another PC. The program enables you to watch activity taking place on another Look@Me user's screen, and it can be run either as a standalone applet or as a Netscape Navigator plug-in. Collaboration over the Internet can occur between Look@Me users (or Timbuktu Pro users -- the commercial version of this program) on either a Windows PC or a Macintosh. The concept is quite simple but the applications of this technology are limitless.

MovieStar

Version: 1.0a3
File Date: 03/04/96
Size: 27 Kb
Download Time: Approx. 30 seconds with 14.4 modem
Developed By: Intelligence At Large
Registration: Freeware
File location: <http://130.91.39.114/npstar32.zip>
Windows95.com: Category -- N/A
Description:

MovieStar is a compact Netscape plug-in for Windows 95 that lets you view QuickTime movies embedded in any World Wide Web page. Although several plug-ins are already available for viewing QuickTime movies, the MovieStar plug-in is unique in that it allows you to view QuickTime data in a "streaming" format. This means that a continuous stream of data is loaded into your Web browser, enabling you to view the movie (video and sound) without delay or lengthy download times. Embedded movies created by other applications can be viewed normally by the MovieStar plug-in or they can be saved as streaming movies with the "MovieStar Maker" (not included here -- available at <http://www.beingthere.com/>). In addition, MovieStar Maker movies can be viewed without streaming by other QuickTime viewer plug-ins, eliminating the risk of alienating Web site visitors who don't use the MovieStar plug-in. Please keep in mind that you'll require the 32-bit version of QuickTime for Windows to make use of this plug-in (<http://quicktime.apple.com/emmys/QT32INST.EXE>).

MS Bookmark Conversion Utility

Version: 1.0

File Date: 02/29/96

Size: 147 Kb

Download Time: Approx. 2 minutes with 14.4 modem

Developed By: Microsoft Corp.

Registration: Freeware

File location: <http://www.microsoft.com/windows/download/winbm2fv.exe>

Windows95.com: Category -- Web Browser Utilities

Description:

This helpful freeware utility from Microsoft was designed to convert Netscape users to Internet Explorer users. The program adds Bookmarks from Netscape Navigator into the Favorites menu of MS Internet Explorer without modifying the original Bookmark file. With recent news of an Alpha version of I.E. on the horizon (supporting Java, JavaScript, Visual Basic Script, HTML 3.0 and Frames), you'll have no excuse not to "convert"!! ;^)

URL2Net

Version: 4.0
File Date: 02/10/96
Size: 1.2 Mb
Download Time: Approx. 19 minutes with 14.4 modem
Developed By: Starcourt Computers
Registration: Shareware \$30.00 US
File location: <http://www.compulink.co.uk/~starcourt/u2n4032f.exe>
Windows95.com: Category -- Web Browser Utilities
Description:

URL2Net is an intuitive utility which allows you to capture addresses of Internet resources, World Wide Web pages or FTP sites from any document (i.e. an E-mail message). Once an address is captured, it can then be easily added to your Netscape bookmarks, Internet Explorer favorites, or Win95 desktop Shortcuts. URL2Net will also save the Internet addresses in a number of formats for use in other World Wide Web browsers and Internet tools. Let's say you received an E-mail from a friend which gives the URL and a description of a terrific new Web site. You could highlight the entire message, save it to the clipboard and then launch URL2Net.

The program decodes the information in the clipboard using "IntelliParse", separating the verbal description of the Web site from the URL. It sounds a little complex, but the end result is a finely tuned collection of Internet resources including full descriptions of the sites. Context sensitive help is available for most URL2Net features.

WebAnalyzer

Version: 1.0 Beta 3

File Date: 03/04/96

Size: 1 Mb

Download Time: Approx. 16 minutes with 14.4 modem

Developed By: Incontext Corp.

Registration: Free Beta Evaluation

File location: <http://www.incontext.ca/demo/analyzer/wabeta30.exe>

Windows95.com: Category -- Web Browser Utilities

Description:

WebAnalyzer is graphical tool used to examine the structure of an entire Web site. When you enter the URL for the first (or index page) of a Web site (remote or local), the application scans and displays all of the "nodes" and their contents for the site, including links to external sites and broken links.

WebAnalyzer displays the link information for web sites in a variety of ways: in concentric circles centered from the index page, by displaying the inward and outward links for a selected node in the current Web site and by showing details for each node referenced in the Web site (i.e. node size and type). Nodes may be any of the following file types: documents, pictures, video, audio, applications, FTP, GOPHER, "mail-to" items and unknown content. In the Node List view, the nodes appear according to type in this order. A unique feature of WebAnalyzer is its ability to generate a report for a Web site, which includes complete information about a site and a summary of the information in the WebAnalyzer views. A report is comprised of a series of linked HTML documents which you can view in your browser. Be sure to take a good look at this app!

CyberPilot Pro

Version: Beta 1
File Date: 02/15/96
Size: 2.1 Mb
Download Time: Approx. 34 minutes with 14.4 modem
Developed By: NetCarta Corporation
Registration: Free Beta Evaluation (expires March 24, 1996)
File Location: <ftp://ftp.netcarta.com/pub/cpp.exe>
Windows95.com: Category -- Web Utilities
Description:

CyberPilot Pro is a promising new "browser accelerator" for Windows 95. The program is used to create a "WebMap", which shows you an entire Web site in an easy-to-understand, visual format. The WebMap includes graphical, icon-based representations of the objects in a Web site, such as HTML pages and graphic images; audio, video, and program files; Java, PDF, or Word files; Internet services such as gopher and FTP; and so on. It also displays the objects in a hierarchical view that represents the relationships between the objects, allowing you to quickly and easily navigate a site. CyberPilot Pro works seamlessly with your browser (Netscape Navigator 1.2, 2.0 or later; Spyglass Enhanced Mosaic 2.0; Internet Explorer 2.0 or later), and when you double-click an item in a NetCarta WebMap, the program loads the selected page or object into your Web browser. You can create WebMaps of your favorite sites, or you can use the growing number of WebMaps that are already integrated into the sites you visit (i.e. Lycos Search). If a site includes hyperlinks to other sites on the Web, you can use the same WebMap to explore those sites too. CyberPilot Pro is very efficient at saving online time, and it adds a whole new dimension to Web page navigation.

DerekWare BackGrounder

Version: 2.1

Size: 10 Kb

Download Time: Approx. 2 seconds with 14.4 modem

Developed By: Derek Smith

Registration: Freeware

File Location: <http://shell.masterpiece.com/derek/binaries/bkgrnd21.zip>

Windows95.com: Category -- N/A

Description:

BackGrounder is a helpful and unique utility which automatically changes your Windows 95 wallpaper according to specific parameters. Upon launch, a tiny monitor appears in the Win95 system tray, and a double-click brings up the settings dialog box. The wallpapers can be selected from any disk drive or directory, and the "shift interval" ranges anywhere from one minute up to two hours. It's a simple way to keep your desktop in a state of constant, splendid change.

GrabNet

Version: 2.1b4
File Date: 02/19/96
Size: 1.8 Mb
Download Time: Approx. 28 minutes with 14.4 modem
Developed By: ForeFront Group, Inc.
Registration: Free Beta Evaluation
File Location: <http://www.ffg.com/download.gn.win95.2.html>
Windows95.com: Category -- N/A
Description:

To download this program, you must first complete a "free registration" form on the above mentioned Web page. GrabNet is a tool designed to help you easily collect and organize information gathered from the World Wide Web. The program works in conjunction with your Web browser, and it stores images, text and URLs intuitively in folders and sub-folders on your desktop. Double-clicking on an item within a folder will cause your browser to return to the location from which the item was obtained, essentially creating a highly customized and logical database of Web-related information. GrabNet provides a "drag and drop" interface for organizing data; allows you to view objects as a hierarchical list or as thumbnail images; imports Mosaic Hotlists, Netscape Bookmarks and Explorer Favorites; stores Creation, Modify and Last Visit dates; sorts objects by Label, Origin, Kind, Visit Date, or User Defined Order. The application also provides right mouse button, context-sensitive help, and GrabNet "ShortCuts" can be added to your Windows 95 desktop.

NoteBook

Version: 3.5

Size: 1.1 Mb

Download Time: Approx. 18 minutes with 14.4 modem

Developed By: CT Software

Registration: Shareware \$15.00 US

File Location: <http://www.cris.com/~randybrg/win95/notebook35.zip>

Windows95.com: Category -- N/A

Description:

Notebook is a useful text editor which most closely resembles "NotePad" for Windows 95. I receive many requests for information about new text editors and this program offers some nice enhancements to the somewhat limited, standard Win95 text editor. NoteBook will open much larger files than NotePad, and it offers full font and color selection (it will even save your settings). It features a toolbar, complete with context-sensitive help balloons. The program supports drag and drop text editing, allowing you to move text simply by holding the left mouse button down on the selection, and then dragging it to its new location (text can be copied by holding the CONTROL key down before dragging). Notebook supports overtype mode and insert mode, as well as selected text only printing and saving.

Internet Party Line

Version: 1.0 Beta
File Date: 02/25/96
Size: 283 Kb
Download Time: Approx. 4 minutes with 14.4 modem
Developed By: Intel Corp.
Registration: Free Beta Evaluation
File location: <http://www.intel.com/iaweb/alets/ipartyl.exe>
Windows95.com: Category -- N/A
Description:

Internet Party Line is an extremely innovative new application from the makers of the Pentium chip. It's a multi-party audio chat program designed to work over relatively low-bandwidth connections such as the Internet. It's something like using an IRC (Internet Relay Chat) style of conversation with audio replacing text! Instead of trying to mix audio from each participant in real-time (what a mess that would be), Internet Party Line queues statements and plays them one at a time. This way, a group of people can audio chat without taking turns speaking. The program is actually implemented by two applications: IPARTY.EXE (the client) and IPARTYD.EXE (the server). You can run just the client, or choose to host Internet Party Line sessions by running the server as well. It's a little difficult adjusting to the fact that you can talk into your microphone while someone else is speaking. When you push the Talk Button, playback through your speakers stops until you release that button, at which time playback resumes where it left off, so you won't miss anything. And because Internet Party Line sessions are named by URLs (Universal Resource Locators), you can advertise your hosted sessions via your own Web page. Pretty cool stuff!!

WinStock

Version: 1.8
File Date: 03/12/96
Size: 1.1 Mb
Download Time: Approx. 18 minutes with 14.4 modem
Developed By: Michael Goldsmith
Registration: Shareware \$20.00 US
File Location: <http://www.teleport.com/~magoldsm/winstock/ws32r1v8.zip>
Windows95.com: Category -- N/A
Description:

WinStock is a standalone application which retrieves and displays stock information in a window on your desktop. The program fetches stock quotes from the quote server at Security APL, allowing you to track an unlimited number of stocks in a variety of ways. Information retrieved by the application includes the full name of the stock, the stock exchange on which the stock is traded, the time of day of the last buy or sell, the price at which the last trade was executed, the number of shares of the stock that have changed hands for the day, the change in the price since the opening price for the day, the daily high and low prices, the 52-week high and low prices, as well as the bid and the ask prices. WinStock allows you to set-up and track stocks in a portfolio format, and it provides you with the ability to search for the ticker symbol of a stock you don't know. It's a must for the individual investor!

TC-Director

Version: 1.9
File Date: 02/12/96
Size: 815 Kb
Download Time: Approx. 13 minutes with 14.4 modem
Developed By: Richard Eradus, Tashcom Software
Registration: Shareware \$25.00 US
File Location: <http://ourworld.compuserve.com/homepages/tashcom/tchtml.exe>
Windows95.com: Category -- N/A
Description:

TC-Director is quite simply the best HTML editor that I have come across. Installation and set-up are straightforward, and the interface uses toolbars for navigation. Help files are actually HTML documents that use hypertext links for an menu system. But the beauty of TC-Director is in its robust and comprehensive set of features. The program supports all Netscape Navigator 2.0 and Internet Explorer 2.0 HTML tags to date. There is a mail wizard, a guestbook wizard and a page-indexing wizard. There is support for HTML 3 tags and the entire array of graphics and mathematical tags. Future releases will include support for Microsoft's new VBScript and Netscape's JavaScript is available in this version. TC-Director has its own FTP client to upload your documents (registered version only), you can open up to three documents at the same time, there is AVI support for imagebrowsers, there is an HTML table wizard, an imagemap file editor, a thumbnail page wizard, and support for user-defined macros. Don't miss this one!

TransX95

Version: 1.0
File Date: 03/04/96
Size: 151 Kb
Download Time: Approx. 2 minutes with 14.4 modem
Developed By: ITS Systems
Registration: Shareware \$35.00 US
File location: <http://www.cris.com/~Randybrg/filez/transx21.zip>
Windows95.com: Category -- N/A
Description:

TransX95 is an efficient, well-designed application which allows you to export an entire operating system from one physical hard drive to another, including all pre-installed applications and their associated settings. The program also enables you to make use of older DOS-based back-up utilities and to create reliable back-ups, even when used with new operating systems (such as Win95) which implement drive structure parameters, and which are inconsistent with the older DOS back-up utilities. TransX95 runs in a DOS window, but your mouse will remain functional. Be sure to examine the README file because the Help file is only available for registered copies.

WordWare Personal Information Manager '95

Version: 1.0

Size: 124 Kb

Download Time: Approx. 2 minutes with 14.4 modem

Developed By: Andrew Freeman

Registration: Shareware \$15.00 US

File Location: <http://www.cris.com/~randybrg/win95/word7pim.zip>

Windows95.com: Category -- N/A

Description:

The WordWare Personal Information Manager (PIM) is actually an add-on for Microsoft's Word 7.0. PIMs usually offer a multitude of business or personal organizational tools, and this one is no exception. Information can be easily imported from virtually any database or spreadsheet, and the program will store up to 21,000 separate entries. It includes a very realistic rolodex, standard WinFaxing capability, and even automatic "background faxing" when used in conjunction with Delrina WinFax Pro. Other features include the ability to create full-color reports, business letters and envelopes. It comes with its own phone dialer, automatic dialer, voice mail dialer and access to common Windows functions. WordWare PIM logs all phone calls, allows for searches and enables you to set alarms for various tasks. It's quite an amazing, yet compact add-on for Microsoft's latest word processor.

News Xpress

Version: 2.0b0
File Date: 01/25/96
Size: 208 Kb
Download Time: Approx. 3 minutes with 14.4 modem
Developed By: Ken Ng
Registration: Freeware Beta
File Location: <ftp://ftp.hk.super.net/pub/windows95/wskutil/nx20b0.zip>
Windows95.com: Category -- N/A
Description:

News Xpress is the 32-bit version of the extremely popular newsreader for Windows 3.x. Technically, it's a Windows Sockets compliant USENET newsreader that uses the NNTP to access newsgroups and articles on a news server. Set-up of the program is straightforward, and the user interface is pure Windows 95. Some of the key features of News Xpress are threaded discussions (it's able to pack multipart articles automatically), support for cross-posted articles, a kill-file, local folders and an outbox, support for CC-by-mail and Copy-self, built-in UUencode/UUdecode, built-in JPEG viewer, automatic URL-launching, and remote article finding (by Subject or by Keywords). Don't let the size of this program fool you -- it's very robust.

ISDN Accelerator Pack

Version: 1.0

File Date: 03/06/96

Size: 376 Kb

More Info URL: <http://www.microsoft.com/windows/software/isdn.htm>

File location: <http://www.microsoft.com/windows/download/msisdn.exe>

Description:

The ISDN Accelerator Pack enables Windows 95 to make dial-up network connections over high-speed, digital ISDN lines. ISDN can be five or more times faster than analog modems: its speed ranges from 56 to 128 kilobits per second before compression and varies by telephone company and the ISDN hardware you use. To take advantage of ISDN's speed, your Internet Service Provider, corporate LAN, or online service will need to support ISDN and the Point-to-Point Protocol (PPP). Most telephone companies now offer ISDN, and it works over existing telephone lines.

SuperBar

Version: 2.0

File Date: N/A

Size: 1.6 Mb

Download Time: Approx. 26 minutes with 14.4 modem

Developed By: Sam Lam

Registration: Shareware \$5.00 US

File Location: <ftp://freebsd.cdrom.com/pub/win95/utls/spbar20.zip>

Windows95.com: Category -- N/A

Description:

Super Bar provides a single-click launch pad for up to 100 Windows 95 programs (.EXE,.BAT,.TXT,.WAV,.BMP,.PIF,.DOC), creating a somewhat more convenient "Starting" point for your favorite 32-bit applications. Upon launching, a single row of 10 blank buttons are displayed on the desktop, which will later contain icons for any programs that you choose. There are 10 rows of buttons in the registered version, but only a few are available in the shareware version. Custom features include a choice of colours for the icon bar and a slider to select the size of the buttons.

LifeSaver

Version: 1.01
File Date: 02/06/96
Size: 776 Kb
Download Time: Approx. 12 minutes with 14.4 modem
Developed By: Jeff Becker
Registration: Freeware
File Location: <ftp://members.aol.com/aerofiles1/lifesavr.zip>
Windows95.com: Category -- N/A
Description:

LifeSaver is a configuration file back-up and restore utility, which can be used to recover from problems due to corrupt configuration files, or changes to configuration files which can not be undone (this can be very unpleasant). Configuration files are most often modified by installing new software or hardware, and automated restoration of these files should only be done as a last resort if you can not manually restore them to a previous state (or if they have become corrupt). With this application, you can back-up and restore up to seven different configuration files, run it from a command line with scheduling programs, restore files from the command prompt (DOS) mode, and save up to 10 back-ups. LifeSaver also provides the "What's This?" help system, courtesy of the right mouse button. Please note: this program requires the VB4.0 RunTime Library. It can be downloaded from ftp://members.aol.com/aerofiles2/vb4_32.zip if you're unsure whether or not you have it.

MilkTruck Delivery

Version: 1.0 Beta 1
File Date: 02/05/96
Size: 533 Kb
Download Time: Approx. 8 minutes with 14.4 modem
Developed By: MilkTruck, LLC.
Registration: Free Beta Evaluation
File Location: <http://www.milktruck.com/beta/win32/setup.exe>
Windows95.com: Category -- N/A
Description:

Milktruck Delivery combines the speed and functionality of software with the richness and adaptability of the World Wide Web. It is essentially a Web browser enhancement, which enables you to browse websites anywhere offline and keep track of (update) your favorite ones with the click of a button. Milktruck Delivery can be configured to download entire sites, including graphics, videos, sounds, Shockwave objects, server pushes and even Java applets. For those of us who pay by the hour for Internet access, this application is extremely valuable, since we can now quickly download Web page information first, disconnect and then browse the entire site at our leisure. Upon launch, the program configures itself to work alongside your favorite browser, and then it brings you to Milktruck's website, whether you are online or offline. The application actually uses your browser as a "platform", allowing access to all of the features and delivered sites through Web pages and Web forms.

More Than Words For Windows 95

Version: 1.2
File Date: 02/02/96
Size: 5.8 Mb
Download Time: Approx. 95 minutes with 14.4 modem
Developed By: Krepec Multimedia Corp.
Registration: Trialware \$19.95 US
File Location: <ftp://kmmc.harvard.net/pub/mtw95-12.exe>
More Info URL: <http://kmmc.harvard.net/>
Windows95.com: Category -- N/A
Description:

With Valentine's Day just around the corner, I thought the timing of this review was very appropriate. It's a big one all right, but if you would like to create something truly romantic for your sweetheart, More Than Words is sure to impress! It's a unique application which allows you to easily create personalized multimedia greeting cards for any occasion. The sizable file includes an Interactive Multimedia Tutorial, which explains step-by-step how to create the cards, and several catalogs of multimedia material: images (flowers, sentimental, holiday, celebration), verses (add the name of the recipient within the verse), music, background watermark images, sound effects and color styles. There is also a catalog of 35 pre-designed cards to choose from. An intuitive text editor allows you to personalize any verse, type your own verse or type a personal text message to the recipient. You can then very easily record a personal voice message and proceed to deliver the card via E-mail. The "Send" function automatically packages and compresses your card together with the auto-playback code into a single .exe file, allowing immediate playback with the click of a button. If you wish to examine one of the greeting cards, a Valentine's Day demo is available at <ftp://kmmc.harvard.net/pub/valent-1.exe> (approx. 282 Kb).

PC Sweep 32

Version: 3.54
File Date: 01/20/96
Size: 2.45 Mb
Download Time: Approx. 39 minutes with 14.4 modem
Developed By: Shane Stump, StumpWare Consulting
Registration: Shareware \$40.00 US
File Location: <http://web2.airmail.net/sstump/pcswp32.exe>
Windows95.com: Category -- N/A
Description:

PC Sweep is a versatile, 32-bit multi-window file manager with a nice assortment of disk, directory, and file management functions. The primary goal of the program is to make disk cleaning chores simple and fast. PC Sweep supports Windows 95/NT, and its interface includes "Bubble" help, speed menus, tool bars and tab dialogs. The application allows you to log disk drives incrementally or entirely, easily maintain ZIP files by displaying and treating them as DOS directories, create self-extracting ZIP files without the need for an unzipping utility, and drag-and-drop files between logged drives (both move and copy). Very nice app!

4th Dimension

Version: 4.0

File Date: 02/14/96

Size: 157 Kb

Download Time: Approx. 3 minutes with 14.4 modem

Developed By: Thinking Man Software

Registration: Freeware

File Location: <ftp://ftp.thinkman.com/pub/thinkman/4dtime40.zip>

Windows95.com: Category -- N/A

Description:

4th Dimension is a 32-bit, easy-to-use time synchronization utility for your PC's clock. It achieves "the exact time" by connecting to outside time servers, which use either the SNTP(RFC 1769) protocol or "The Time Protocol" (RFC 868). Useful user-defined options include how often your clock is synchronized, the maximum time correction allowed (in minutes or hours) and which time server to use. You'll never be late again!

Ponger 32

Version: 1.6
File Date: 02/04/96
Size: 133 Kb
Download Time: Approx. 2 minutes with 14.4 modem
Developed By: Savant Software
Registration: Shareware \$10.00 US
File Location: <http://www.cris.com/~randybrg/win95/ponger32.zip>
Windows95.com: Category -- N/A
Description:

Ponger is ideal for people whose Internet Provider will drop a connection after a certain time period of no activity. This practice can be extremely aggravating, especially when you're simply reading a lengthy Web page or online document. The application was designed to keep dial-up network connections alive by tagging the host system at regular intervals, in one of several configurable ways. This keeps the host from timing out and dropping the client connection. By running Ponger once you're online, you'll be able to keep your connection alive without any activity on your part for as long as you like.

Quick View Plus

Version: Demo
File Date: 02/08/96
Size: 2.4 Mb
Download Time: Approx. 39 minutes with 14.4 modem
Developed By: Inso Corp.
Registration: Trialware \$49.00 US
File Location: <http://www.inso.com/pub/qvptrw32.exe>
Windows95.com: Category -- N/A
Description:

Quick View Plus is an excellent 32-bit add-on utility that greatly enhances the viewing features built into Windows 95. It places a menu item called "Quick View Plus" on the context menu (when you right-click) of every file in Explorer, Exchange, Find as well as the Open and Save dialogs in your programs. The application gives you a fast, high quality view of the file, allows you to print the file, and enables you to copy all or part of the file to the clipboard for use in other applications. It does this for over two-hundred types of files (document formats, spreadsheet formats, database formats, graphic formats, presentation formats, compressed formats, DOS EXE, Windows 16-bit EXE or DLL, and Windows 32-bit EXE or DLL), without requiring you to own the original application that created the file. It makes the chore of passing files, memos and worksheets from one system to another very easy.
