1 General Information

comp.sys.amiga.games FAQ \$VER: csag_faq 2.2 (28.11.95)

1.1 New this version

New link in Gurus section.

Updated Games Domain address.

Various updates of program versions.

1.2 Introduction

If you're new to this group, READ THIS. All of it. Please.

This FAQ provides the answers to the most Frequently Asked Questions on this newsgroup; readers new to this group should read it before posting.

It is posted on or about the 25th of each month to comp.sys.amiga.games, comp.answers and news.answers. New users of Usenet news should be sure to read all of the articles in news.announce.newusers to familiarise themselves with the general etiquette of communicating on the net.

1.3 How to get this FAQ

Listed below are possible methods of obtaining the latest version of this FAQ. Unless noted it comes in an archive containing AmigaGuide, ANSI text, and postscript formats.

1.3.1 FTP

Usenet FAQ Archive: 'ftp://rtfm.mit.edu/pub/usenet/comp.sys.amiga.games/games_FAQ'
Text only.

MSOR FTP server: 'ftp://msor.ex.ac.uk/pub/amiga/games_faq.lha'

Aminet: 'ftp://ftp.doc.ic.ac.uk/pub/aminet/docs/help/csag.faq.lha'

Games Domain: 'ftp://wcl-1.bham.ac.uk/pub/djh/faqs/C.S.Amiga.Games.lha'

1.3.2 WWW

These are HTML versions of the FAQ

MSOR WWW server: 'http://msor.ex.ac.uk/pub/amiga/faq.html'

Games Domain: 'http://www.gamesdomain.co.uk/'

1.3.3 E-mail

Usenet FAQ Archive

Mail 'mail-server@rtfm.mit.edu' with the line *send usenet/news.answers/amiga/games-faq* in the body.

Aminet Mail Server

Mail 'ftpmail@doc.ic.ac.uk' or 'ftpmail@ftp.luth.se' with *SEND pub/aminet/docs/help/csag.faq.lha* in the body.

Me :-)

Mail 'ken@msor.ex.ac.uk' with *Games FAQ* in the subject line. This is not a 'bot answering so you could also say hi!

1.4 Correspondence

Corrections, suggestions, comments and cash bribes :-)) are welcome, please send them to Ken Powell at ken@msor.ex.ac.uk.

1.5 Copyright

This document copyright © 1995 by Ken Powell.

It may be placed on Aminet (including Aminet CD) and Fred Fish (any format he wants). Mail me for permission to use in any other material.

Some terms used in this document are trademarks and registered trademarks of their owners, these are not necessarily indicated in the text but are acknowledged.

1.6 Credits

Thanks to Christina Schulman (schulman+@pitt.edu) for letting me use her comp.sys.mac.games FAQ as the basis for this FAQ.

Nick Ridley (nick@mentaur.demon.co.uk) for the CivAGA patches.

Suggestions and additions to this FAQ have been contributed by:

ML Hewitt (u3f88@cc.keele.ac.uk)

Rowan Crawford (dljar1@giaeb.cc.monash.edu.au)

Mikali (u9162828@uow.edu.au)

Geoffrey Newman (grn@alcove.apana.org.au)

Nicholas Fisher (kau10@central.sussex.ac.uk)

Elliott Mitchell (ehem@cyro.cryogenic.com)

Bill Bennett (bill.bennett@zoology.oxford.ac.uk)

dEN (ma3dhcy@midge.bath.ac.uk)

Nigel Hughes (ngh94@aber.ac.uk)

Jan Ellgring (mozart@orgasmatron.ppp.lrz-muenchen.de)

Peter Olafson (Peteroo@aol.com)

Thanks!

1.7 A Word About Flaming

Every now and then some moron posts something along the lines of "Amiga games suck!!!! Get a real machine!!!!" And immediately 30 or 40 people take the bait and post long, vitriolic replies and exhort everyone to mail-bomb the perpetrator.

Please, please, please don't waste your time and our bandwidth replying to this kind of idiocy. More often than not it was posted as a practical joke from the account of some hapless user who left themselves logged in at a public computer cluster. The owner of the account then logs back in a day or two later to find several megs of hate mail and uuencoded core dumps in their mail spool.

If you feel that you absolutely have to share your witty, concise flame on the complete superiority of the Amiga above all other gaming platforms, take it to comp.sys.amiga.advocacy, where it will be appreciated.

2 Sources of games and information

2.1 PD and Shareware

There are many Amiga games available to try for free. These games go under many labels including freeware, PD, shareware, giftware,...

Most of this software is available on the 'net although some is only available from PD Houses which advertise in various [\[Magazines\]](#), page [\[undefined\]](#).

2.1.1 Aminet

The major site for ftp'ing Amiga software is the Aminet chain. There is the *mother* site at 'ftp.wustl.edu' and mirror sites around the world. (A mirror site is a site that contains an exact copy of the contents of another site, in the hopes of diverting some traffic away from the more popular site. The mirror sites are usually several hours behind the *mother* site.)

It is usually faster to get files from the nearest mirror. A full list of sites (correct at 3/10/95) is below - mirrors are being added all the time so this is subject to change.

Location Name IP Address Path

USA (MO)	ftp.wustl.edu	128.252.135.4	pub/aminet/
USA (WI)	ftp.netnet.net	198.70.64.3	pub/aminet/
Australia	ftp.livewire.com.au	203.16.26.3	pub/aminet/
Scandinavia	ftp.luth.se	130.240.18.2	pub/aminet/
Switzerland	ftp.eunet.ch	146.228.10.16	pub/aminet/
Switzerland	ftp.math.ethz.ch	129.132.104.6	pub/aminet/
Germany	kelly.uni-paderborn.de	131.234.128.206	pub/aminet/
Germany	ftp.uni-paderborn.de	131.234.2.42	pub/aminet/
Germany	ftp.uni-stuttgart.de	129.69.18.15	cd aminet
Germany	ftp.uni-erlangen.de	131.188.3.2	pub/aminet/
Germany	ftp.cs.tu-berlin.de	130.149.17.7	pub/aminet/
Germany	ftp.uni-trier.de	136.199.8.81	pub/aminet/
Germany	ftp.tu-chemnitz.de	192.108.33.193	pub/aminet/
Germany	ftp.fh-augsburg.de	141.82.16.242	pub/aminet/
Germany	ftp.uni-oldenburg.de	134.106.40.9	pub/aminet/
Germany	ftp.uni-bremen.de	134.102.228.2	pub/aminet/
Germany	ftp.uni-kl.de	131.246.9.95	pub/aminet/

Germany ftp.uni-siegen.de 141.99.128.1 pub/aminet/
Germany ftp.rz.uni-wuerzburg.de 132.187.1.2 pub/aminet/
France ftp.cnam.fr 163.173.128.15 pub/aminet/
Portugal ftp.ua.pt 193.136.80.6 pub/aminet/
UK ftp.doc.ic.ac.uk 155.198.1.40 pub/aminet/
UK micros.hensa.ac.uk 148.88.8.84 pub/aminet/

People with only e-mail access can use ftpmail from ftp.doc.ic.ac.uk and ftp.luth.se. Send e-mail to 'ftpmail@doc.ic.ac.uk' or 'ftpmail@ftp.luth.se' with *HELP* in the body.

2.2 Commercial

If you want commercial games then several companies will sell them to you cheap. National chains in the UK, including Future Zone and HMV, have special offers on at various times (including new releases). Mail order companies also offer good discounts on new and old games.

National firms that may ship orders abroad are:

UK

- Premier Mail Order : +44 1268 271172
- Special Reserve : +44 1279 600204 (joining fee)

AUSTRALIA

- Sigmacon : (02) 524 9846
- Solutions Rendered : (02) 838 0733

2.3 Magazines

Various magazines either discuss games or are dedicated to them. This is a list of various magazines worldwide.

UK

- Amiga Action £3.95 (2 disks)
- Amiga Computing £3.95 (2 disks)

- Amiga Format £3.95 (2 disks)
- Amiga Power £3.95 (2 disks)
- CU Amiga £3.95 (2 disks)
- CVG £2.75 (multi-format)
- GamesMaster £??.? (multi-format)

AUSTRALIA

- The Australian Commodore and Amiga Review A\$4.95

USA

- Amiga Games Zone (subscription only)

2.4 Hints

Solutions and hints for many popular games are available via anonymous ftp at `ftp://risc.ua.edu/pub/games/solutions` and `ftp.uu.net/pub/games/solutions`. There's also a large solution site at `ftp://nic.funet.fi/pub/doc/games/solutions`, but you will need unzip or gzip to uncompress these files. (Avaliable on **Aminet** as `/util/arc/unzip51x.lha` and `/util/pack/gzip124x2.lha`)

Aminet has hints in the `/game/hint` directory.

There is also the *Games Domain* site which has walkthroughs for several popular games at `http://wcl-rs.bham.ac.uk/GamesDomain`.

Most Amiga `<undefined>` [Magazines], page `<undefined>` publish walkthru's for new games.

If you can't find an answer there, post your question—chances are *somebody* on `comp.sys.amiga.games` has gotten farther than you!

If someone posts a question for which you also want the answer, instead of posting "Send me the answer too!" send email to the original poster and ask him or her to relay the answer to you.

2.5 FAQs

There are FAQ's for some popular Amiga games, especially if they are multi-platform. A good place to look if you have WWW access is Dave Stanworth's Games Domain, at '<http://wcl-rs.bham.ac.uk/GamesDomain>' and by ftp at '[ftp.wcl-1.bham.ac.uk/pub/djh/faqs](ftp://wcl-1.bham.ac.uk/pub/djh/faqs)'.

Another good bet is the '`comp.sys.ibm.pc.games.*`' newsgroups if there is a PC version of the game.

Some are available directly from the maintainers:

Civilization FAQ:

- FTP: '<ftp://wcl-1.bham.ac.uk/pub/djh/faqs/civilization.faq>'
- WWW: '<http://www.gamesdomain.co.uk/GamesDomain/civfaq1.html>'
- e-mail: send to djh@wcl-rs.bham.ac.uk with the subject *Civ FAQ please*

Sim City 2000 FAQ:

- FTP: '<ftp://ftp.netcom.com/pub/thx>'
- e-mail: send to thx@netcom.com with the subject *SC2K FAQ please*

Frontier (Elite II) Hints and Tips:

- Available from **Aminet** as '[game/hint/frontier.lzh](#)'

2.6 Archivers

DMS files are packed with the DiskMasher. This packs whole disks and is the main way to distribute Non-DOS disks over the internet. A copy of DMS can be found on Aminet as '[/util/arc/dms111.run](#)'. To undms to a disk in df0: type `dms WRITE file.dms TO df0:`.

LHA and LZH files are packed with an LHA compatible packer. The main one is LHA which is shareware. A freeware alternative is LZ. Both of these are on Aminet as '[/util/arc/LhA_e138.run](#)' and '[/util/arc/lz_1.92.lzh](#)' (this needs LHA to unpack it however so you'll have to get LHA ...). To unlha to a formatted disk in df0: type `lha -a x file.lha df0:`.

The dms and lha archives are self-extracting files so executing them will leave you with the appropriate files.

3 All about...

3.1 DOOM

It's not available. ID Software have stated that there will not be port of DOOM to the Amiga for technical reasons. There are usually one or two threads on comp.sys.amiga.games and comp.sys.amiga.programmer discussing the validity of these reasons.

Several demos on Aminet show DOOM-type engines that might be built into proper games and at least one commercial release is being worked on. The Aminet demos include:

'demo/aga/dentects.lha' (updated version of dentwolf)

'demo/euro/Pearl.Doomed.lha'

'dev/misc/wolf3d.lha'

'game/demo/AlienBreed3D.lha' (Playable version)

'game/demo/engine.lha'

'game/demo/fearsnew.dms'

'game/demo/Gloom.lha'

'game/demo/walls.lha'

'game/misc/DamageWolf3DV1.lha'

'gfx/aga/poom_02.lha'

'gfx/misc/DamageWolf3D_2.lha'

'gfx/misc/TextDemo57.lha'

'gfx/misc/wolf.lha'

'gfx/misc/wolf3.lha'

`'gfx/misc/bsp1.0.lha'`

`'gfx/misc/dog3d.lha'`

The TextureMapping FAQ, posted to the newsgroup regularly, has more details of the methods and the games. FTP from **Aminet** as `'docs/misc/tmapfaq1.05.lzh'`.

Discussion of the Amiga clones of DOOM, and comparisons of DOOM to similar Amiga games and demos are appropriate in `csa.games`. Discussion of DOOM gameplay does not belong in `csa.games`. Try `rec.games.computer.doom.playing` or `comp.sys.ibm.pc.games.action` instead.

3.2 Programming

The Amiga FAQ posted in `comp.sys.amiga.programmer` is a good place to start. You can also ftp it from **Aminet** as `'docs/misc/AmigaFAQ.lha'`. You'll need a compiler, assembler or programming language which can cost from a few pounds to over one hundred. You'll also need lots of time and a good idea (or two). Good luck!

3.3 Releasing Software

Do **not** post binaries to `comp.sys.amiga.games`. The best way to release your game to the `csa.gamers` is to make it available at an **Aminet** site and then post an announcement about it to `comp.sys.amiga.games` and `comp.sys.amiga.announce` with a description and the path. People without ftp can email it from an Aminet ftp-mail server such as `src.doc.ic.ac.uk`. See [\(undefined\) \[PD\]](#), page [\(undefined\)](#). If you are unfamiliar with FTP then see the FTP FAQ posted in `csa.introduction` every 2 weeks.

A plea - unless your game does not use AmigaDOS directory structures then pack it with an lha type packer. Please only use dms for those files that really need it (and you don't need dms to keep the directory structure intact...)

3.4 Chess

GNUChess has been ported to the Amiga (on **Aminet** it is `'game/board/GnuChessBin.lha'`) with a front end `'game/board/AmyBoardBin.lha'`.

Amiboard is on Aminet as `'game/board/AmiBoard_V1_0.lha'`.

There is also UChess which seems to be updated regularly and comes in several versions for different specced machines. You really need at least a 68020 and a few megabytes of RAM though. Aminet has the latest version as `'game/think/UChess289.lha'`.

3.5 Classics

So you want to play old Spectrum, C=64 and arcade games on the Amiga? Can you do it?

Probably. *Aminet* is a good place to start (the `'games'` directory obviously).

You can also use a **Spectrum** emulator (Spectrum 1.7 `'/misc/emu/spectrum-1.7.lha'` and ZXAM `'misc/emu/ZXAM20b.lha'` are the best) and play the originals of these programs. There is an FTP site in Norway with freely distributable Spectrum games (`'ftp://ftp.nvg.unit.no/'` or use WWW to `'http://www.nvg.unit.no/spectrum'`). An A1200 with FastRAM will be needed to approach Spectrum speeds though.

For **C=64** freaks, Frodo is available on Aminet as `'misc/emu/FrodoV1_5.lha'`. This will need rather more power to approach C=64 speed though.

3.6 Gurus

Many games have not been coded to follow Commodore's guidelines, a lot of these break on Amigas with accelerators (especially 68040s), FastRAM and the AGA chipset. If a new game fails to run, people will usually mention it on `csa.games`. Nigel Hughes has created the "030+ Compatibility List", try his web page at `'http://www.dcs.aber.ac.uk:80/~ngh94/comp.html'`.

The main ways to try and get such programs to run are:

Use the boot-menu (KS 3) and turn off caches, hard disks and the AGA chipset. This will work with a lot of games.

Only start games from a PAL or NTSC workbench with mode promotion turned off. Some games assume a PAL/NTSC WB and get confused if there isn't one.

Use Degradar (`/util/misc/Degradar.lha` on Aminet) or similar programs such as KillAGA (`/util/misc/killaga2.lha`) to turn your A4000 into an A500 - ain't progress wonderful :-/

Ask the publisher if there is a patch available - sadly, most software houses only make patches for the PC versions of their games.

Finally, Gerald Yuen has a WWW page with tips on it. Try '<http://www.aber.ac.uk/~gcy3/gamesfixes>' or mail gcy3@aber.ac.uk.

3.7 Civilisation AGA

Civilisation AGA is very slow, luckily it can be sped up dramatically. There are three speed ups, the first moves the game into FastRAM (so you must have FastRAM for this to work), the second stops the pointer being changed and the third removes the screen fades; these work on all Amigas. To perform these patches you need a binary file editor (like AZap, FileX - there are lots available on Aminet) and a program to decrunch PowerPacker 4 files (either PP4 or DLD which is in the VirusZ distribution on Aminet '[/util/virus/virsz307.lha](#)').

Unpack the main program and load it into the file editor and change the following:

Move to FastRAM:

At offset &14 change &40 to &00

At offset &1C change &40 to &00

At offset &20 change &40 to &00

Stop the pointer changing:

At offset &2D17C change &4EAEFEF2 to &4E714E71

Remove the screen fades:

At offset &2CCF2 change &6728 to &66B0

At offset &2CE60 change &59466002 to &4E714E71

Resave the file (and recrunch if you want) and start as normal.

3.8 M.U.L.E.

Is M.U.L.E. available? No, but Subtrade (a M.U.L.E. clone with changed graphics) is. It takes place on the ocean ground of Irata with near identical gameplay.

"It is a commercial game by a German company. I don't think it's available in the shops anymore." - Jan Ellgring

There is also a similar game on Aminet called FutureTrade, '[game/demo/FutureTrade_\[1|2|3\].lha](#)'.

3.9 Infocom

Most Infocom adventures, including those not released for the Amiga, can be played if you buy the PC version and transfer the datafiles to the Amiga (using CrossDOS or similar) and then use a PD interpreter to run the datafiles - Dave Kinder's itf is reported to be good (on Aminet as `/game/role/itf200.lha`). It can't play the Level 6 (graphics) adventures such as Shogun though.

3.10 Dungeon Master I and II

A sequel to the original Dungeon Master WAS released some years ago - this was called *Chaos Strikes Back* and was an expansion for DM I. DM II was released at the beginning of November and has a, supposedly, much better game engine. It needs an 020 or better and ECS/AGA chip sets to run.

If you want to play the originals (DM and CSB), Psygnosis released a double budget pack in 1992 which should still be available. These versions have been patched to run under OS 2.04+ and can be installed on a hard-drive using `'game/patch/csbhd.lzh'` from Aminet.

3.11 CD³²

CD³² games are talked about in `csa.games` and there are also two CD³² specific newsgroups which are ideal for talking about technical aspects of the CD³² versions.

These groups are `comp.sys.amiga.cd32` and `rec.games.video.cd32`, the latter is most appropriate for games related talk.

3.12 HD Installable games

There is a list of games on the WWW that shows what is needed to install various games on HD. Thanks to dEN for providing this. Point your browser at `'http://www.bath.ac.uk/~ma3dhcy/hd.txt'` and have a look.
