Pansy know-how

SHOPPING

Pansy plants should be compact and dark green. Avoid faded, stretched-out plants, even if they're on clearance. In fall, buy early—September or early October—because plants established later than this may not overwinter successfully.

GROWING

Pansies are undemanding annuals, rarely experiencing pest or disease problems. They'll thrive in average garden soil with full sun and ample moisture. To ensure consistent flowering, scratch slow-release fertilizer into the soil and remove spent flowers, above. Overwintered pansies can sometimes attract hungry rabbits, so use a repellent spray if necessary. 🐇
