

Accelerated Implementation Moves Energy Assessment Results to the Bottom Line

News | Paul Studebaker

For every 10 industrial energy assessments, maybe one company actually does a recommended project and carries it through until its results improve the bottom line. "The rest never get anywhere," says Cahal Devlin at ABB Automation & Power World 2012. To

solve that problem, ABB is rolling out a new energy efficiency assessment approach it calls "energy value acceleration." [Read more »](#)

Leading a Culture of Improvement

Article | G. Keith Diepstra

From efficiency and safety to productivity and conservation, a sustainable enterprise requires a culture of continuous improvement. The author tells how to recognize whether or not your plant has such a culture, and what you can do about it. Hint: the presence of repeat mechanical, operational or product failures is a good indicator that you might want to read this. [Read more »](#)

Zotos International Claims U.S. Manufacturing's Largest Wind Energy Project

News | Sustainable Plant Staff

Zotos' 3.3 MW on-site wind energy project in Geneva, New York, uses two 1,650 kW wind turbines that are expected to meet nearly 60 percent of the 670,000-square-foot manufacturing plant's power needs. To achieve the plant's goal of 100 percent renewable electric power, the company has agreed to purchase up to 9 million kWh of green energy. [Read more »](#)

Did We Miss Something?

We do our best to keep you informed on all of the news happening in industrial sustainability.

Occasionally, however, something might not hit our radar. If you have an interesting story or white paper, please submit it to **Sustainable Plant's LinkedIn Group** and we'll add it to our news line-up below. [Submit here](#)
