Can agriculture meet the challenge of feeding 9 billion people?

Population growth over the next 40 years will require more food production, estimated to be an additional one billion tons of cereal grains and 200 million tons of meat. [Read More](#)

Dairy farmer part of effort to reach Neb. consumers

Angela Bowman

Nebraska consumers are being challenged to learn more about their state's agriculture, and in the process they could also win a year of free groceries from the group Farmers Feed Us. [Read More](#)

NMPF reorganizes to address 2013 industry priorities

With a new farm bill delayed at least until spring 2013 and other legislative priorities such as immigration reform coming soon to the attention of the new Congress, the National Milk Producers Federation (NMPF) announced that it has reorganized its staff to better meet the challenges that are sure to come in the year ahead and promoted several staff members who will facilitate these efforts. [Read More](#)

What will 2013 bring?

Tom Quaife

Rod Hissong tries to look at things with a positive attitude. And while it's tempting to be optimistic going into 2013, he has to admit there are a number of unknowns. [Read More](#)

**PLANTING THE RIGHT
BMR HYBRID MAKES A
BIG DIFFERENCE**

FIND YOUR HYBRID

Mycogen
SEEDS

Not all BMR hybrids are alike

All Mycogen® brand Silage-Specific™ BMR hybrids contain the producer-preferred bm3 gene mutation for higher digestibility and increased dry matter intake. That means feeding more cornsilage, using less high-priced grain and increasing milk production. It's another reason why planting our BMR hybrids makes a big difference. [Find your hybrid here.](#)

Is water quality impacting milk quality?

The quality of water on your dairy directly influences the performance of the hygiene chemicals used to clean and sanitize your milking system and bulk tank. [Read More](#)

Block cheese down 4 cents on CME

Class III futures continued their decline on Tuesday as the spot markets came under pressure. [Read More](#)

**FREE
WEBINAR**

Choline and its impact on Subclinical Ketosis

Listen to a discussion of how subclinical ketosis can rob your herds of productivity and profitability, and choline's essential role in managing the transition period. Dr. Garret Oetzel & Ric Grummer discuss the science and economics of choline's impact on subclinical ketosis. [Watch now.](#)

Check stored grain for potential problems

A warm spell in January is a good time to check stored grain. The value of the grain stored in a 25,000-bushel bin is about \$175,000 at a corn market price of \$7 per bushel, \$350,000 for soybeans at \$14 per bushel and \$200,000 for wheat at \$8 per bushel. [Read More](#)

Cow of the Future: Breeding for reduced methane output possible

Careful breeding could result in an 11-26 percent reduction in methane emissions from dairy cows. [Read More](#)

**FREE
FORAGE
LIBRARY**

Forage Resource Center

Visit the Free Forage Resource center for all your current news and articles for optimal forage management. Everything from planting tips to storage advice and everything in between. Need tips on dealing with the drought? [Check it out.](#)

Seminar to help producers sort out forage decisions

Selecting the right forage species to grow can be a daunting task with long-term consequences, but an upcoming Indiana Forage Council seminar will help producers narrow down the options. [Read More](#)

Move your business into the next generation

"Farming into the Next Generation," a workshop focused on leadership and management succession, is slated for Feb. 12-13 in West Lafayette, Ind. [Read More](#)
