HPrint DLL Index

Overview
HPrint DLL Control Dialog

Overview

HPrint DLL is a DLL that provides file printing.   One or more file(s) can be selected from the file list and printed.   The "Print" action push-button is configured to allow for printing of ASCII files (i.e. INI, LST, MAP, etc.).   On activation the Hprint DLL Control Dialog box   is presented to the User.

HPrint DLL Control Dialog

The HPrint DLL Control Dialog box consists of three edit box for margin control, three check boxes the control options and four push-buttons.

The three edit control boxes allow for changing the **Top** and **Bottom** Margin which are specified in number of lines to skip.   The other edit box is the **Left** Margin which is specified in dots per inch.

The three check boxes control the DLL operation. The "**Include Header Information**" check box enables/disables the printing of the header information at the top of each page. The header information contains the date and time, the current page number, and the filename.

The "**Use for all files**" check box enables/disables whether this dialog box is presented before each file to be printed.   This allows the print parameters to be changed for each file to be printed.

The last check box "**Page number from 1 for each file**" controls whether the page numbering is started at page one for each file.

The four push-buttons are as follows:

OK   OK to print.   The Printer dialog box is presented next which allows for the control of the printer, number of copies, the print orientation, etc.

Cancel   This push-button will return back to Hviews with out printing.

Fonts This push-buttons will present a dialog box for selecting the font.   After exiting the font selection dialog then press the OK push-button to begin printing.

Help   This button allows you to read this text.
