~~*DialNumber*ä *:*~~
A Phone Dialing DDE Macro for
Word for Windows 1.x (WinWord)
© **1991 by Daniel Goodman**
(CIS 70154,2463)
~~This macro is **free**. Try it out. Pass it on.~~
~~If you find it useful, please call & let me know.~~

Easy Installation Instructions...
Double clicking on the word "INSTALL" in the box below will install the macro. Thats all there is to it. For your protection, this installation routine does ***not*** automatically save global changes to disk. If you decide to keep a macro on your menu permanently, you must execute "File; SaveAll" when you are done. Alternatively, when you exit WinWord, you will be prompted to "Save Global Glossary and Command Changes?" This is your last chance. If you do want to keep the changes that were made by the installation, choose the 'Yes' option.

Macro Description

~~***Install:***~~

or even take your hands off the keyboard? Great news
            futurists! That day is here.

dialing options are specified. Type in the number, choose your dialing options from the radio buttons and/or check box and click OK. Thats it! It dials via DDE using Metz Dialerä. As an added convenience, it always remembers the last number you dialed, as well as any other dialing options you might have chosen, and presents it all to you as a default. *DialNumber*ä installs automatically to your Utilities menu as "Dial Number...", and is also instantly available as a pop-up "hot key" by pressing "Control D".

easy to make. If you have a problem, feel free to give me a call.

⁃ Do you think *DialNumber*ä is a helpful addition to Word for Windows?
 ⁃ Are you pleased because something so useful is also free?
 ⁃ Would you like to get more applications like *DialNumber*ä ?
                        ~~***For***~~

                    Who We Are...
