

# LaserMaster WinPrint Technology

## *HIGH PERFORMANCE LASER PRINTING FOR WINDOWS*

**LaserMaster WinPrint Products** are designed for Windows. They use the processing power of your computer, the advanced capabilities of Microsoft Windows, and the WinPrint Manager to deliver high-resolution documents from your Windows and DOS applications.

- **Host-based processing.** All WinPrint Products use the processing power of your computer, instead of using a slower processor and memory located in the printer or on a separate controller card. This technology makes WinPrint products the fastest way to print from Windows. It also means that whenever you upgrade your computer, you speed up your printer.
- **Made-for-Windows printing.** The WinPrint Manager is a Windows application that intelligently manages printing. The WinPrint Manager uses the multitasking capabilities of Windows 386 enhanced mode to print in the background, while you're working on other tasks.
- **Printing versatility.** You can print with WinPrint Products in three ways: with the Windows direct driver, with the PostScript emulation, or with the HP LaserJet emulation (not included in the WinJet 1200, WinJet 800, WinJet 300Si, or WinJet 300). You can switch between low and high resolution (HP LaserJet emulation is limited to 300 dpi).

Besides printing from an application, you can use the WinPrint Manager to manually enqueue PostScript or HP LaserJet (PCL) files for printing, change the order of files in the queue, add and cancel print jobs, and more. You can also use the WinPrint Manager to change the page order of multiple-page PostScript files. This enables you to print a thumbnail layout of all pages in the file, print only the odd- or even-numbered pages, manually duplex (print double-side), or print the pages so they can be saddle-stitched into a booklet.

- **Typographic versatility.** All WinPrint Products include fifty fonts in TrueType format and six PCL4 fonts. They also work with TrueType and Type 1 format fonts from other vendors and with other PCL soft fonts.
- **No more font downloading.** You have access to all WinPrint fonts all the time. There's no need to think about which fonts are "resident" or which fonts must be downloaded.
