TekColor Editor Widget Hierarchy

The following is a graphical presentation of the widget hierarchy for the TekColor Editor. The widget name is in lower case letters and the class name is capatilized just below the widget name. Each page contains the entire hierarchy for that section of the editor. Thus certain widgets such as main are repeated throughout this appendix. Since the actual implementation may differ from the one shown it is best to use a program like editres to check the hierarchy before depending on it looking like the diagram that follows.
