

CARD2STN File Converter 1.0

CARD2STN is a freeware utility from Looking Glass Technologies that converts Microsoft Cardfile data files (*.CRD) into Stickies! export files(*.STN). The STN files are version 1.5 format, so they will work with all versions of Stickies!.

To convert a file, simply run CARD2STN, and it will prompt you for the name of the cardfile and export file. When you enter filename, include the file extensions, and if a file is in a directory other than the current one, you'll have to include its path. Once the file is converted, you can import it into your active set or file cabinet just as you would any other Stickies! export file.

CARD2STN will not replace an existing STN file without your confirmation, and it never deletes or changes your CRD file.

CARD2STN can also be run from the "Run..." command line of the File Manager or Program Manager, without prompting. For example, the command:

```
CARD2STN.EXE mycards.crd c:\stickies\mycards.stn
```

will convert the Cardfile data file mycards.crd into c:\stickies\mycards.stn.

CARD2STN can only convert files created with Cardfile 3.0, or those created with Cardfile 3.1 that do not contain graphics in any card images. A Cardfile 3.0 file that has one or more card images with graphics will be converted, but the graphics will be ignored.

CARD2STN is distributed as a DOS-mode, self-extracting archive file that was created with LHA 2.13. LHA is copyright 1988-91 by Haruyasu Yoshizaki.

Even though CARD2STN is freeware, please send any problem reports, suggestions, and comments to:
