The following Visual Modem Help Topics are available:

Visual Modem: Overview

Commands

Procedures

Keyboard Hot Keys

Registration

Commands

From the Main Window, there are 3 primary menu options:

File Menu Commands

Configure Menu Commands

Modem Menu Commands

File Menu Commands

Visual Modem allows you to save any settings configuration to a file for future reloading and use. In this way, you can <u>save</u> many different configurations for any set of circumstances. You need only to reload the particular settings configuration file (using the <u>Open</u> file menu command), and send the settings to the modem. Any number of files can be saved and subsequently used.

All settings configuration files are identified by their file extension of ".VM".

The available File Menu Commands are:

<u>New</u>

<u>Open</u>

<u>Save</u>

<u>Save As...</u>

<u>Print Modem Settings</u>

<u>Write Current Settings to Clipboard</u>

<u>Exit</u>

New

The New file command immediately resets all current settings to their default values. It also indicates that you wish Visual Modem to forget about the existence of any configuration
file you may have been building at the time. Therefore, in order to save current settings, you
will need to use the <u>Save As...</u> menu option to establish a new file name. Thereafter, you need only use the <u>Save</u> menu option to save any updates.

Any subsequent use of the New file menu option will once again reset all current settings.

Note: The resetting of default values that occurs when the New file menu option is selected, occurs only in the computer's memory. No settings are altered in the modem's memory or <u>NRAM</u> .

Open

This option allows you to select any existing Visual Modem configuration files which you may
have created and saved previously.

Opening a file does *not* send the configuration settings contained in that file to the modem. It
only loads those values into the computer's memory.

In order to actually set the values contained in the opened file to the modem, you need to use
the Send Current String to Modem   or Write Settings to NRAM   option from the Modem
file menu.

In this way, you can browse the existing settings for any Visual Modem saved settings file

without altering your modem's current settings.

Save

This option will save the current settings in the file designated at the time the <u>Save As...</u> file menu option was selected.

This option is only available once the file has already been saved at least once during the

current Visual Modem session.

Save As...

This option allows you to save all of the current Visual Modem settings in a file which you

can then reload into Visual Modem at a later date using the Open   file menu command.

You are given a dialog box in which to specify the name of the file you wish to save.

Note: Regardless of the file extension you specify, Visual Modem will use the extension of ".VM" when saving the settings configuration file.

Exit

This option will terminate your current Visual Modem program.

Configure Menu Commands

There is currently just 1 item under the Configure Menu option:

User Preferences

Modem Menu Commands

This is where you will find the bulk of Visual Modem's functionality:

Fetch Current Settings

Basic Settings

Extended Settings

S Register Settings

Phone Numbers

Build - A - Command

Create Command File

Send Current String to Modem

Write Settings to NRAM

Fetch Factory Defaults

Basic Settings

This option provides a simple and accurate means of altering your modem's current basic

settings.

By scrolling through the various list boxes, you can alter the current basic subsequent write
to your modem, or a file, or you may cancel any changes made during the dialog. You may
also set the values to those of the factory default.

Extended Settings

This option provides a simple and accurate means of altering your modem's current extended settings.

By scrolling through the various list boxes, you can alter the current extended settings options in any combination. You may either save the settings for subsequent write to your modem, or a file, or you may cancel any changes made during the dialog. You may also set the values to those of the factory default.
